

Leisure Life Pool and Spa recommendations for caring for a non-chlorine pool using AquaSilk (Baqacil branded for distributor distribution vs. manufacturer direct).

4 Tips for Using Aqua Silk and Baquacil Pool Chemicals

1. Maintain proper levels of Aqua Silk Sanitizer, and Aqua Silk Oxidizer.
2. Maintain proper water balance: pH, alkalinity and calcium hardness.
3. Maintain proper filtration, and use a filter cleaner every 3 months.
4. Replace your filter sand every 2-3 years - paper cartridges every year.

– Add 1/2 gallon AquaSilk Sanitizer (Step 1) per 10,000 gallons at start-up. Test weekly and add a top-up dose per the dosage chart on the label.

– Add 1 gallon of AquaSilk Free Shock Oxidizer (Step 2) per 10,000 gallons at start-up.

- Add 1 quart per 10,000 gallons weekly for light use and good weather.
- Add 2 quarts per 10,000 gallons weekly for heavy use.
- Add 2 quarts per 10,000 gallons after a party or storm or for cloudy water.
 - Note: cloudy water could be a sign of unbalanced water - do that first.

Algaecide Options (Step 3):

– Add 5 oz AquaSilk Algaecide or ProTeam Prevent per 10,000 gallons at start-up.

- Add 4 oz per 10,000 gallons weekly

– Add 6 oz Baquacil Performance Algaecide or ProTeam Polyquat 60 per 10,000 gallons at start-up.

- Add 2 oz per 10,000 gallons weekly

CDX or Non-Chlorine Shock:

Baquacil CDX is a product that helps maintain a residual of oxidizer. 16 oz per 10,000 gallons is added at start-up and then weekly. If you are using Algaecide - you do not need to use CDX. One or the other. Very few of our customers use CDX, once our inventory is exhausted we will no longer sell.

95% of our customers use Performance Algaecide/Polyquat 60 and Non-Chlorine Shock to achieve the same result. Use the Algaecide as recommended weekly and once a month or after heavy use or a storm, add 1 lb. of monopersulfate non-chlorine shock per 10,000 gallons.

Products - all safe for use in a Biguanide pool:

AquaSilk Sanitizer = Baquacil Sanitizer (Step 1)

AquaSilk Free Shock Oxidizer = Baquacil Oxidizer (Step 2)

AquaSilk Algae Control and ProTeam Prevent = Baquacil Algaecide (Step 3)

ProTeam PolyQuat 60 = Baquacil Performance Algaecide (Step 3)

Algaecide + Monopersulfate Non-Chlorine Shock = CDX (Step 3)

AquaChek Blue Test Strips = Baquacil test strips

ProTeam Filter Magic = Baquacil Filter Cleaner

ProTeam MicroFloc Clarifier vs. Flocc in Filter
