#### Live Virtual Workshops (3 Hours) - Level 2 (Intermediate)

The Live Virtual Workshops are a level 2 training that is designed for individuals who are new to our programs or in the beginning stages of implementation.

The workshops are a more in-depth experience than the free training webinar that is offered on the website. These virtual workshops go over the essential components of the training webinars including the administration and scoring of the assessments and frameworks to ensure all participants have a strong understanding of the programs. The workshops will then expand into how to organize and use all of the resources and materials.

One of the values of the live virtual workshops is participants will be able to interact with a consultant and ask questions in real time and follow up on any misconceptions or difficulties that they are having with implementation.

We do suggest that anyone who attends any of these level 2 virtual extension workshops view the free training level 1 webinars that are available ahead of time.

To see the agenda for each workshop please click on the agenda below. These are 3 hour and 15 min. trainings and will be offered multiple times per year.

Please see the agendas below. If you have any questions about registration please email <a href="mailto:info@numeracyconsultants.net">info@numeracyconsultants.net</a>.

# Forward and Backward Counting Sequence

## Level - A

A student who is assessed at a Level A in forward or backward counting sequence can count orally both forward and backward to and from ten. Student should be able to count objects up to ten and have a one to one correspondence. If a student has tested at a Level A they should receive instruction at Level B.

If a student does not pass a Level A, then they are considered an instructional Level A. The student would receive instruction at Level A.

#### Activities:

Orally count on a number line up to 10 or back from 10. Touch and say each number as you count.

Drop counters in to a bucket one by one and have the student count each time they hear a sound. Put 10 counters in a bucket then take the counters out and count backwards from 10
