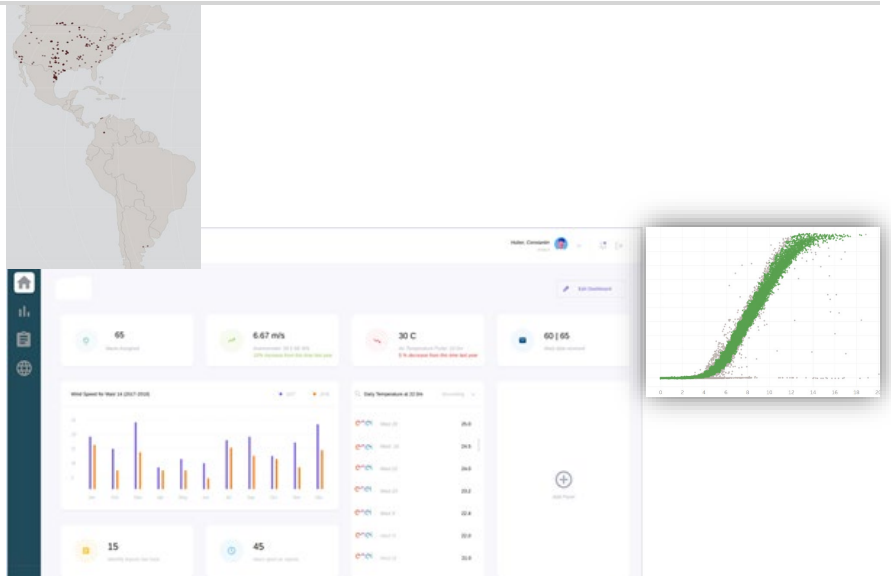
VerdeYu

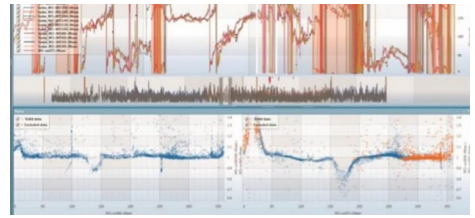
Green Automation

www.VerdeYu.co

Pre-construction data analysis hub

- Verdeyu collaborated with its customer, a well-known developer in Southeast Asia who is currently managing multiple campaigns for a large fleet of assets. Our engineers worked with the customer to establish a digital platform for data analytics, give actionable insights, and use the power of the cloud to handle pre-construction data.
- Data management (monitoring, filtering, processing and analysis) of offshore and onshore pre-development data
- The measured data analysis application enabled the client to connect with acquisition systems and leverage the flexibility of the platform to:
  - Process and ingest data
  - Filter and analyse
  - Create automated alerts
  - Export to cloud
  - Dynamically review the potential project profitability





VerdeYu
Green Automation

Key Features

- ✓Data strategy
- ✓Data analytics
- ✓Gap analysis
- ✓Data Optimization
- ✓Real time alerts
- ✓Data cleanising
- ✓Mobile enabled
- ✓SaaS model
