Occupational Security™

A practical framework for enterprise life-safety, continuity, and training readiness.

Modern organizations face overlapping risks: workplace violence, severe weather, operational disruptions, and cascading emergencies that do not respect internal silos. **Occupational Security™** is Stonebridge Strategic's integrated framework that unifies **emergency preparedness, violence prevention, business continuity, and training readiness** into one cohesive program, so plans work in the real world, not just on paper.

What this white paper covers

This overview introduces how Occupational Security™ helps leaders in operations, safety, HR, security, and compliance strengthen readiness across the full incident lifecycle: prevention, response, and recovery. It outlines a practical approach to:

- Build or refine an OSHA-aligned Emergency Action Plan (EAP) and incident response structure
- Reduce workplace violence risk through policies, reporting workflows, and threat assessment capability
- Tie response planning to continuity priorities so operations can recover faster
- Turn plans into performance through scenario-based training and exercises

The four pillars of Occupational Security™

1. **Emergency Preparedness:** Clear procedures for life-safety and immediate response
2. **Violence Prevention:** Prevent, identify, and manage threatening behavior and active threat risk
3. **Business Continuity:** Maintain or restore critical functions during disruption
4. **Training and Readiness:** Exercises and leadership decision-making that make plans executable

BridgeShield™: Real-time tabletop exercises that feel real

The paper highlights **BridgeShield™**, Stonebridge's real-time tabletop platform designed to stress-test decision-making under pressure. BridgeShield uses modular scenarios, live injects, and practical job aids (communication scripts and decision matrices) to reveal gaps, strengthen coordination, and drive measurable improvements after the exercise.

A tiered maturity model (meet organizations where they are)

Stonebridge's model supports three common entry points:

- **Essential:** Establish fundamentals (core plans + an initial exercise)
- **Audit and Enhance:** Assess what exists, fix gaps, validate improvements
- **Full Program Build:** Develop an integrated, sustainable Occupational Security program over time

Standards-aligned, practical by design

The full white paper includes a mapping of deliverables and services to widely used frameworks and guidance (including OSHA EAP expectations, NFPA active threat planning concepts, ASIS workplace violence guidance, FEMA exercise methodology, and ISO-style continuity principles). The intent is simple: help leaders translate “standards language” into operational, defensible action.
