

AGRA-ROUSE

AGRA-ROUSE IS PROVEN TO INCREASE ROOT DEVELOPMENT

CHRIS JOHNSON, MAY RIVER GOLF CLUB

“Agra-Rouse has been a part of our plant growth program for over three years now. This product has proven to be a complete complement to all of our management practices on the golf course. We have found that applications of this product will yield an increased vertical density, root vigor, and durability of the canopy. Agra-Rouse has also proven effective in the enhancement of other fertilizer and plant growth products.”

WHAT IS AGRA-ROUSE?

Agra-Rouse is a bio-stimulant used as a yield enhancing supplement with plant nutrients. Agra-Rouse enhances cell division, cell differentiation, cell enlargement, **ROOT GROWTH** and nutrient utilization.

Agra-Rouse is especially effective when applied with fertilizers and is compatible with most pesticides.

Agra-Rouse is used extensively as a seed treatment and additive to starter fertilizer and can be impregnated into dry fertilizer.

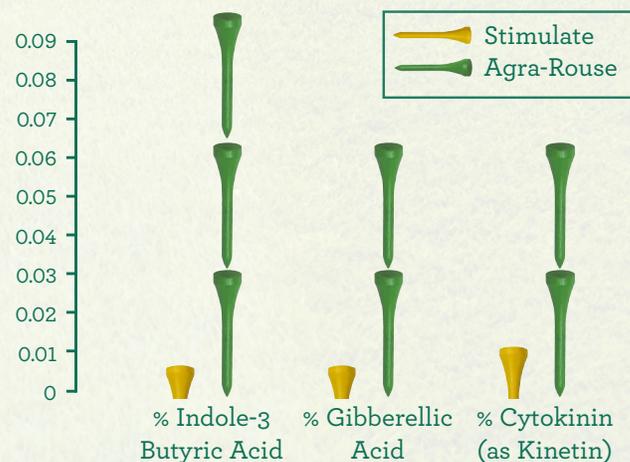

Agra-Rouse is packed with a blend of cytokinins, auxins, and Gibberellic Acid (a natural synergist) that **increase root mass by stimulating new root growth**, not just by fattening and elongating existing roots (an important distinction).

Agra-Rouse is an EPA registered hormone bio-stimulant. EPA registration assures you that every jug of Agra-Rouse contains the same amount of active ingredient.

Agra-Rouse Your Plants

By using **AGRA-ROUSE** the normal functioning of a plant's hormonal system is insured and enhanced, an essential factor in healthy growth and development of the plant.
