

"Because The Tour Championship by Coca-Cola is held in late September, our MiniVerde greens enter the fall season mowed tight and heavily regulated. In 2010, after four weeks of virtually no growth and our wanting to raise our height-of-cut for winter, George recommended Agra-Rouse to help the plant begin growing again. Despite the cool weather of mid-October, the plants did respond, and we were able to increase our HOC to our desired level. Agra-Rouse also works well in the spring to "kick-start" the MiniVerde so we can begin to increase our density earlier in the season. Agra-Rouse has become an important part of my program."
