JJ Treatment for soft Hoof.

1. Clean and wash out any debris from the hoof making sure no grit or stones are left behind.
2. Dilute J.J. Hoof Soak One to Ten parts warm water in a suitable bucket.
3. Control your horse so that the infected hoof is placed in the bucket with your mixed J.J. Hoof Soak.
4. Allow the hoof to be soaked for approximately Ten minutes, then allow to air dry.
5. Repeat this procedure daily for a minimum of five days.
6. Do not work the horse until the infection is completely cleared up, or allow to stand in damp muddy conditions.
7. Once per day use J.J. Hoof Gel. This Alcohol Gel should be poured over the Frog area and allowed to soak in once per day. The Alcohol wicks the fungicidal disinfectant into the hoof to assist the soaking.

The two parts should be done at opposite ends of the day.

JJ Equine is a brand of Pearson & Black Ltd.
