

Speech & Language Therapy

TLC provides the highest quality speech-language assessments and therapy services for children and adults. Goal areas vary widely depending on the client's specific profile, with frequently seen areas of need including (but by no means limited to) oral motor, motor-planning, articulation, receptive and expressive language, augmentative and alternative communication (AAC), social skills/pragmatic language, phonological awareness, fluency and executive functioning. Our seasoned, board-certified therapists are trained in a variety of techniques and approaches, and are able to tailor each client's therapy program to support their specific needs, learning styles and preferences. Emotional and behavioral regulation is often a big component in our sessions, and helping families and caregivers understand what their child is trying to communicate is a priority. We pride ourselves on working hard to find the best mix of communication modalities for each client and continuing to up the ante to that next level of success!
