

*Sumberhayati Prima is the latest generation of biological fertiliser using soil-fertilising microorganisms that work more effectively and efficiently.*

*With Sumberhayati Prima, the cultivation of food crops, secondary crops, horticulture and plantations produce better results and the fertility of agricultural land is always maintained.*

## Advantages

Harvesting becomes optimal.

Increases plant resistance to disease.

Repair and maintain the soil.

Able to decompose pesticide residues in the soil.

## How to use

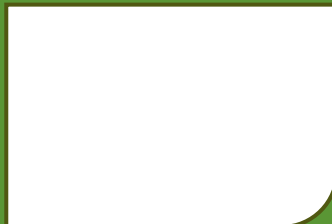

Dilute SH Prima biological fertiliser with clean water (max 1:100).

Apply with a sprayer or can be sprinkled directly.

## Contents

*Azospirillum sp.*    *Pseudomonas sp.*  
*Azotobacter sp.*    *Rhizobium sp.*  
*Bacillus sp.*        *Saccharomyces sp.*  
*Trichoderma sp.*

## Paddy

HAKI ID M000908478

**PRIMA**

### Pre-planting

After processing the land, spray the SH Prima solution evenly on the surface of the soil (muddy). This stage requires 2 litres of SH Prima/ha. Leave for 3 days, then ready to plant.

### 30 days after planting (DAP)

Spray the SH Prima solution again evenly on the surface of the soil. This stage requires 2 litre of SH Prima/ha.

### Rice when the panicles (flowers) emerge and at the age of 60 DAP

Spray the SH Prima solution again evenly on the soil surface. Make sure the solution sprayed reaches the ground. This stage requires 2 litres of SH Prima/ha.

## Secondary Crops and Horticulture

(Corn, Chilli, Tomatoes, Vegetables, Potatoes)

### Pre-planting

After the soil has been processed, spray the SH Prima solution evenly on the surface of the soil. Leave it for 3 days, then be ready to plant the seeds. This stage requires 2 litres of SH Prima/ha.

### Next step of SH Prima application

Once every 2-3 weeks, spray the SH Prima solution again evenly on the soil surface. This stage requires 2 litres of SH Prima/ha.

## Plantation Crops

(Palm, Rubber, Coffee, Chocolate, Tea, etc.)

### Nursery stage

Apply enough SH Prima solution to the plant seed media in the polybag. Repeat every 10 days.

### Plants before productive stage

Apply SH Prima biofertiliser solution around the roots, repeat once every 3-4 months.

### Plants after productive stage

Apply SH Prima biofertiliser solution to each tree. Repeat once every 3 months.

**Do not mix with any chemical fertilizers or pesticides.  
Do not dilute SH Prima with chlorinated water.**
