

White Oak Plain Sliced Veneer

Species Color & Tone: White Oak Plain Sliced Veneer brings a classic spectrum from light gray tan to medium brown, with enough variation to feel natural yet still organized. It is one of the most flexible staining platforms, handling washed, neutral, and deep tones well, which is why many standards are built around it. A single species can support several coordinated ceiling and wall colors.

Grain & Appearance: In plain sliced form, White Oak shows recognizable cathedrals through the center with straighter grain toward the edges, plus occasional small ray flecks. This grain provides gentle movement and warmth that scales comfortably from small rooms to tall public volumes.
