

## Engineered Elm Quarter Sliced Veneer

**Species Color & Tone:** Engineered Elm Quarter Sliced Veneer delivers a carefully controlled mid tone palette often compared to a “Champagne” finish. Color is tuned during manufacturing, so large fields remain consistent across different areas and project phases. It captures the approachable warmth of Elm without the unpredictable heartwood and sapwood shifts of natural logs.

**Grain & Appearance:** Quartered Engineered Elm shows straight to gently interlocked grain with a subtle, slightly coarse texture that reads well from floor height. Because the pattern is engineered, the visual rhythm is intentionally repeatable, which is valuable for grille ceilings, continuous planes, and brand standards that rely on predictable results.
