

Engineered Walnut Quarter Sliced Veneer

Species Color & Tone: Engineered Walnut Quarter Sliced Veneer is built around a deep, chocolate to espresso palette with very tight control over color. The process minimizes light sapwood flashes and abrupt value shifts, which helps large ceilings read as one continuous dark field. It is a good answer when the design calls for a dramatic Walnut look across multiple phases or locations.

Grain & Appearance: Quartered Engineered Walnut features straight, linear grain with fine striping and little to no cathedral figure. The surface feels smooth, dense, and quietly luxurious, well suited to monolithic planes, slatted volumes, and integrated lighting where grain should support the architecture, not dominate it.
