COMPLYWISE TECHNOLOGIES, LLC

EMAP WORKFLOW OVERVIEW

EMAP MONITOR · ENFORCE · PROTECT

FROM ENROLLMENT TO DOCUMENTED RESOLUTION

EMAP connects electronic-monitoring information, communication, review, action, and documentation in one accountability workflow. The exact functions available to each authorized user depend on role, scope, and deployment.

The goal is not simply to collect monitoring information. The goal is to make it clear what happened, who was notified, what was reviewed, what action followed, and how the matter was resolved.

THE EMAP ACCOUNTABILITY WORKFLOW

1. ENROLL & PREPARE Create or connect the authorized enrollment record, case information, monitoring conditions, and required preparation.	**2. MONITOR & RECEIVE** Maintain active supervision and receive monitoring information and communications relevant to the enrollment.
3. ALERT & IDENTIFY Surface information that may require attention so the appropriate authorized user can identify what needs review.	**4. REVIEW & RESPOND** Review relevant information and determine the appropriate documented response within the user's role and authority.
5. VIOLATION / NO VIOLATION Document the review outcome, including whether the event results in a violation determination or no-violation disposition.	**6. DOCUMENT & NOTIFY** Record actions and communications and support notification or follow-through with the appropriate authorized participants.
7. FOLLOW THROUGH Track the next required action, response, coordination, or status change so the process does not stop at notification.	**8. CLOSE & PRESERVE HISTORY** Close the matter when appropriate while preserving the time-stamped, auditable history for authorized review.

WHAT CONNECTS THE WORKFLOW

ROLE-BASED ACCESS Authorized users receive visibility appropriate to their role and permitted scope.	**COMMUNICATION** Messages and follow-through can become part of the accountability record.	**TIME-STAMPED ACTIONS** Activity can be preserved in chronological order for later review.	**AUDITABLE HISTORY** The record helps show what occurred, what was communicated, and what action followed.
