COMPLYWISE TECHNOLOGIES, LLC

EMAP

MONITOR - ENFORCE - PROTECT

EMAP STAKEHOLDER ONE-PAGER

EMAP for Electronic-Monitoring Providers

Run electronic monitoring operations from one accountable workflow.

THE CHALLENGE

Providers manage far more than device data. Daily operations can include intake, case information, jail release coordination, device inventory, installation, supervision, alerts, violation decisions, reports, stakeholder communications, and deactivation. EMAP brings those responsibilities into one operating environment.

WHAT EMAP CAN HELP YOU DO

- Manage enrollment, intake, case information, and release coordination
- Track device inventory, assignment, activation, installation, swaps, and returns
- Manage active supervision and alert-review workflows
- Document violation / no-violation decisions and addendums
- Generate and preserve required forms, reports, notices, and stakeholder communications
- Manage deactivation and the end of the monitoring lifecycle
- Maintain a time-stamped, auditable record of actions and follow-through

WHY IT MATTERS

EMAP can function as both a provider office-management platform and a compliance record. Teams can manage the work itself while preserving a consistent history of assignments, alerts, decisions, communications, reports, and follow-through - helping demonstrate how court-ordered and operational responsibilities were addressed.

REQUEST PROVIDER ACCESS / DEMO

See how EMAP supports the provider workflow from enrollment through supervision, documentation, and closure using sample data.
