EMAP

MONITOR - ENFORCE - PROTECT

EMAP STAKEHOLDER ONE-PAGER

EMAP for Law Enforcement

Real-time access when electronic-monitoring information matters.

THE CHALLENGE

When an incident occurs, law enforcement may need fast access to authorized electronic-monitoring information: whether a supervised individual was reported near a location at a relevant time, who the monitoring provider is, what court is involved, and what documented violations or case-connected records are available.

WHAT EMAP CAN HELP YOU DO

- Search supervised individuals and active monitoring records within authorized access
- Run authorized proximity reports using an incident location and relevant time period
- Identify monitored devices reported near the searched location
- Identify the responsible provider and supervising court
- Review monitoring status, documented violations, and case-connected history
- Access available time-stamped records that may support an authorized investigation

WHY IT MATTERS

EMAP helps authorized law-enforcement users move from an incident to relevant monitoring information without first locating the right provider or rebuilding the record from separate sources. Proximity information can provide an investigative lead, while the time-stamped, auditable history shows what was recorded and what follow-through occurred.
