EMAP OVERVIEW

EMAP MONITOR · ENFORCE · PROTECT

A CONNECTED PLATFORM FOR ELECTRONIC MONITORING ACCOUNTABILITY

EMAP is a **secure, web-based platform** that helps electronic monitoring providers manage **enrollments, alerts, reporting, documentation, communications, and day-to-day supervision** from one system. It creates a **time-stamped, auditable record of actions and communications** while giving authorized courts, law enforcement, prosecutors, jails, and other stakeholders access to the information they need based on their role.

Electronic monitoring produces information. EMAP helps connect that information to the people, review, communication, action, and documentation needed to create accountability.

WHERE EMAP CAN SUPPORT THE PROCESS

PROVIDER OFFICE MANAGEMENT Manage enrollment, supervision, alerts, documentation, reporting, communication, device-related workflow, and follow-through.	**JAIL PROVIDER REGISTRY** Support visibility into electronic-monitoring providers and coordination around installation and release-related activity.
COURT & PROSECUTOR ACCESS Provide authorized violation review, registry/reference information, and active-monitoring visibility within the user's permitted scope.	**LAW ENFORCEMENT ACCESS** Give authorized law enforcement real-time access to relevant monitoring, provider, case, and accountability information.
GOVERNMENT / STATE OVERSIGHT Provide a platform framework that can support broader accountability, oversight, and visibility where an agency or jurisdiction adopts it.	

DESIGNED TO WORK ACROSS PROVIDERS AND JURISDICTIONS

EMAP is designed to be **provider and manufacturer neutral**. Organizations can use EMAP to support the accountability functions they need without requiring every participant to use the same monitoring provider or device manufacturer. Deployment can be structured around a specific operational need and expanded as appropriate.

EMAP OVERVIEW

EMAP
MONITOR · ENFORCE · PROTECT

FROM INFORMATION TO DOCUMENTED ACTION

EMAP connects the electronic-monitoring process so authorized users can see what requires attention, review relevant information, document decisions and actions, communicate with the appropriate participants, and preserve the resulting record.

ENROLL	MONITOR	ALERT	REVIEW	ACT	DOCUMENT	NOTIFY	CLOSE

CORE ACCOUNTABILITY CAPABILITIES

- **Role-based visibility** - Authorized users see information appropriate to their role and permitted scope.
- **Documented communication** - Communications and follow-up can become part of the accountability record.
- **Alert and violation review** - Monitoring information can move into structured review and documented disposition.
- **Real-time access** - Information can be available when authorized users need it from a connected web-based system.
- **Time-stamped activity** - Actions and communications can be documented with a clear chronology.
- **Auditable history** - The record supports review of what occurred, what was communicated, and what action followed.

USE THE COMPLETE PLATFORM - OR START WITH A SPECIFIC NEED

EMAP can support a connected multi-stakeholder accountability model, but organizations do not have to begin with every function at once. A provider may focus on office management; a jail may need provider-registry and coordination tools; courts and prosecutors may need violation-review and active-monitoring visibility; law enforcement may need real-time authorized access; and government entities may evaluate broader oversight uses.

WHAT EMAP IS BUILT TO IMPROVE

ORGANIZATION	COMMUNICATION	ACCOUNTABILITY
Bring monitoring-related records and workflow into a more consistent process.	Help close the communication loop between authorized users and document follow-through.	Preserve a time-stamped, auditable record of information, review, action, and communication.
