COMPLYWISE TECHNOLOGIES, LLC

EMAP
MONITOR - ENFORCE - PROTECT

EMAP STAKEHOLDER ONE-PAGER

EMAP for Victim Safety

Keep protected persons informed without exposing private details.

THE CHALLENGE

Victim-safety workflows require careful coordination while protecting sensitive personal and location information. Authorized participants need to know whether required safety-related steps were documented and completed without turning protected details into broadly visible case information.

WHAT EMAP CAN HELP YOU DO

- Support documented victim / protected-person enrollment or decline status at a high level
- Provide role-appropriate visibility into safety-sensitive workflow status
- Preserve time-stamped documentation of authorized actions and notifications
- Support privacy-conscious notices without exposing protected-person identifiers broadly
- Keep protected contact and location information inside appropriate access boundaries
- Maintain a time-stamped, auditable accountability record without exposing protected details

WHY IT MATTERS

EMAP is designed to support safety-sensitive electronic-monitoring coordination while separating accountability from unnecessary disclosure. Authorized users can document required actions and communications, while public and general stakeholder views remain intentionally limited so protected-person information is not exposed.

DISCUSS VICTIM-SAFETY WORKFLOWS

See how EMAP can support documented victim-safety coordination while protecting sensitive information using sample data.
