MONITOR - ENFORCE - PROTECT

EMAP STAKEHOLDER ONE-PAGER

# EMAP for Bonding Companies

Know the status of the individuals you are responsible for.

## THE CHALLENGE

Bonding companies need timely information about the electronic-monitoring enrollments connected to their own cases - without broad access to unrelated records. Release status, monitoring status, conditions, provider information, violations, documents, and deactivation history should be available in one focused view.

## WHAT EMAP CAN HELP YOU DO

- View only company-connected enrollments within authorized access
- See jail / release status and current monitoring status
- Review assigned device and applicable monitoring or bond-condition information
- See responsible provider contact information
- Review related violation reports, addendums, notices, and available documents
- See deactivation history and time-stamped monitoring-related updates

## WHY IT MATTERS

EMAP gives authorized bonding users a focused, case-connected view of the information relevant to their own responsibilities. Role-based access preserves boundaries around unrelated records while the time-stamped, auditable history shows important status changes, notices, and monitoring-related follow-through.

## REQUEST A BONDING DEMO

See how EMAP gives bonding companies focused visibility into their own connected monitoring enrollments using sample data.
