

30-YEAR MANUFACTURING COMPANY

- Developed by a master chemist with 30-years experience in manufacturing highly effective cleaning and germicidal solutions.
- A+ rating with the Better Business Bureau
- Member of The National Safety Council
Operates in over 96 countries around the world

KEY INGREDIENT

This disinfectant has a "Key Ingredient" called "Quat" (Quaternary ammonium cations). If disinfectants don't have this at a certain percentage, then the disinfectant does not have the proper disinfecting properties against the human coronavirus. This high-grade industrial strength disinfectant goes way beyond name-brand, off the shelf cleaners.

HIGH GRADE DISINFECTANT

Clearly, times have changed because of the COVID-19 pandemic and the world will no longer be casual about cleanliness and hygiene: **that awareness is here to stay!**

Our Germicidal Cleaner is the ultimate weapon for these changing times. This disinfectant is EPA registered as an N1 agent and USDA C1 authorized with a unique formulation that kills the human coronavirus along with HIV, VRE, VISA, CA-MRSA, MRSA, HBV, HCV and Canine parvovirus (CPV) and provides maximum effectiveness against a variety of microorganisms.

NO SHORT SUPPLY

Our manufacturer has unlimited supply and can ship right away. Because of the intense demand for germicidal disinfectants, these types of cleaning agents are in short supply, most are unavailable and are likely to remain that way for the foreseeable future.

ECONOMICAL .39/GAL*

Best of all, as a dense concentrate liquid, it is the single-most economical product available. The product has a neutral pH formula perfect for cleaning and disinfecting floors with no residue left behind and also cleans and disinfects walls, sinks, toilets, counter-tops, door handles and equipment and much more. A simple spray application that does not require wiping sanitizes the surface. Key surfaces should always be wiped down. **Diluted cost per gallon is just .39 cents.*

EVERYONE NEEDS IT!

The demand is immediate, urgent and ongoing. For the foreseeable future, everyone must disinfect everything, everywhere, all the time. It is ideal for medical, commercial, industrial, restaurants, retail, institutional, schools, transportation, and residential use.

Anyone concerned with protecting their patients, customers, employees, friends and family will use this throughout each day.
