

Delta Farms EcoShield® Levee Protection Project

Larose, LA – November 2015

Application: Levee Shoreline Protection

Customer: America's WETLAND Foundation

Product Details: Vegetated EcoShield®

Installation: 5280' EcoShield®

Project Summary:

The America's WETLAND Foundation (AWF) brought together public and private partners to create the Gulf Intracoastal Waterway (GIWW) Shoreline Stabilization and Restoration Project in Lafourche Parish, LA. America's WETLAND Foundation contracted Martin Ecosystems to install 1 mile of EcoShield® to protect the levee where the embankment has been eroded.

Since the installation of EcoShield® in November of 2015, the landowner has not had to perform annual lifting or rebuilding of the levee as he has had to do previously. The levee remains in tact where EcoShield® was installed.

Innovation is in our nature.
