

# Joshua's Marina Shoreline Stabilization Project

*Buras, LA – September 2014*

**Application:** Shoreline Stabilization

**Customer:** Plaquemines Parish

**Product Details:** Vegetated EcoShield®

**Installation:** 4600' EcoShield

## **Project Summary:**

Decades of marsh erosion and subsidence along the levees near Joshua's Marina in Buras, Louisiana, have compromised the integrity of these levees, which protect the coastal community of Buras against storm surge. This project was designed to protect this important infrastructure. Funding for the project was provided by the U.S. Fish & Wildlife Service's Coastal Impact Assistance Program (CIAP) and Plaquemines Parish Government.

Innovation is in our nature.
