

# The Halo™ Disinfectant Formula is Unique Yet Brilliantly Simple.

*Unique Patented Technology - Complex, Synergistic Chemistry*

## A Multi-Faceted Killing Mechanism

### HOW HALOMIST™ WORKS

Halo Disinfectants are patented, ready-to-use, 5% hydrogen peroxide and 0.01% silver formulas - the *only* EPA registered disinfectants with this formulation. Hydrogen peroxide is the oxidizing agent; silver adds an additional broad-spectrum anti-microbial element to this unique formula. A proprietary and complex blending process stabilizes the H<sub>2</sub>O<sub>2</sub> while amplifying the antimicrobial action ten-fold, delivering a formula that behaves completely different than its original ingredients. The result: a radical fluid architecture with synergistic, multi-faceted killing mechanisms that:

1. Break down a cell's membrane
2. Destroy enzymes (cell's energy source)
3. Bind the cell's DNA to stop reproduction
