Convert all your Conventional Equipments to Smart ones.

As intelligent platform and gateway, you can connect any device/sensor (wired or wireless) to monitor it and get reports once you need it., Easy to install, to monitor and to get notified instantly.

General Description

This system is offered to the people in need of emergency medical care. This System connects a watch or necklace provided to the patient with an immediate emergency dispatch team, either paramedics or the civil defense. Upon triggering the "emergency" contact button on the necklace with built-in emergency button or watch, the system will pinpoint the location and notify the related teams for immediate assistance.

The system also sends a file containing the patient's medical history, the type of medication he/she takes currently and the contact information of attending physician to the operations center or the ambulance team for more efficient and faster treatment. However, this is contingent on the medical team's available capacity to receive such information through compatible methods (subscribed users).

Commitment to stronger design

Picars is an endless process of development for software, hardware and integration with different systems, software and Picars standards of developing sleek and strong design can serve longer life is our main mission and concern.

THE FIRST-OF-ITS-KIND MONITORING AND REPORTING PLATFORM

We provide accurate information and timely operational insights so you can take a proactive versus reactive approach to monitor in your environment. With real-time alerts and minimal false alarms.

Features	Features
Sleek Design Works as mini controller with different types of systems Using up to 6 inputs and 1 output	• 3mm bezel thin front panel, embedded cabinet. • HD LCD Screen, LED backlight. • Explosion- proof, flameproof, moisture proof • Shock resistance standard reach GB2423. • Anti-static level of contact 4KV, Air 8KV • Anti Surge design.

Central Station

24/7 Monitoring

Monitoring any changes happen to the connected to Picars, superiors can access the interface at any point in time to monitor activities and operations without being physically present within the premises.

Notification

Superiors / owners/ in charge persons and relatives will receive notifications providing text,

PICARS Dashboard Solutions

Executive or data dashboard, a dashboard allows an organization to track the data that is most pertinent to its performance in almost real time. This information management tool collects complex data from a multitude of sources and applications, collates the data and portrays it simply via a graphical interface.

PICARS Intelligence Defined

Is the analysis and presentation of information within an organization to enable strategic decision-making, improve performance, and ultimately increase effectiveness.

The process of Picars intelligence is focused on optimizing the intelligence that already exists within an organization. For information to be fit-for-purpose, data must be gathered from a multitude of sources within the organization and then effectively linked to Picars and interpreted so that it can be displayed simply in visual format on dashboards and meaningful reports can be run. This is a highly-detailed and complex process that requires a wide range of specialized business and technical know-how.
