

CCTVsled™

The Non-Penetrating Roof Mount For All Security Cameras

The CCTVsled™ is the ultimate universal non-penetrating roof mount solution.

The non-evasive commercial roof mount that offers unmatched flexibility in installation scenarios.

The CCTVsled is a universal, non-penetrating parapet roof mount designed to support any wall-mount camera base, providing the flexibility to position your devices anywhere on a building's flat rooftop. With its adjustable height range, this mount offers virtually limitless versatility. Engineered for efficiency, our time-saving mounts are designed for quick and easy installation.

Installation Advantages

- Using a universal mounting plate, the CCTVsled is compatible with any wall mounted camera.
- The parapet mounting arm extends 46 inches from the base of the sled, providing ample space to position the sled either on a straight wall or in a corner.
- The adjustable height of the parapet arm is a key advantage of the CCTVsled. With the ability to raise the arm from 26 to 46 inches, it offers the flexibility to install on 90% of rooftops.

Structural Advantages

- **No Roof Damage:** No drilling holes, preventing potential leaks.
- **Ease of Installation:** Easy to install and remove, making them convenient for temporary setups.
- **Flexibility:** These mounts can be repositioned easily without making permanent changes to the structure.
- **Compliance:** They often meet building codes or lease agreements that restrict structural modifications.

8x8 Universal Camera Mounting Plate
