Applications - The following Applications are available with all Veripress products. No additional purchase necessary.

Archives

Make partial or complete backups of your Workbench configurations.

Clustering

Allocate and manage Imaging and Rendering tasks across multiple computers and networks.

Densitometer

Measure and display density readings taken with a Densitometer or Spectrophotometer.

Displays

Create ICC profiles for system monitors and accurate onscreen soft proofing.

FlipBook

Display a publication as a 2D or 3D virtual book.

Jobs

Display jobs before, during and after processing, and allows users to manage jobs through the system to plot their progress with a pre-configured user interface.

Monitor

Display and manage jobs as they pass through Veripress.

Press Agent

Interface with press console controls to load/reload soft proofs.

SoftProof

Proof jobs onscreen.

Similar to the RIPMonitor, this module displays a list of Books compiled via the Bookfilter.

ClientLog

Displays a log of Client messages that may be generated during normal Client operations.

ClusterStatus

Monitors the progress of Imaging and Rendering tasks on the Server and any active Cluster Nodes.

DropZone

A place to drag and drop files for processing.

MediaStatus

A window showing the current calibration status of a Media data type and a progress bar showing the amount of media (e.g. Paper) used.

QueueManager

View and manage jobs after they have been submitted for processing.

QueueStatus

A progress meter showing the current status of active jobs on the selected queue.

RIPMonitor

Displays the files polled using RIPs configured under the RIP data type within the Workbench.

ServerLog

Displays any system, error and polling messages from the Server.

Status

Shows the disk status (usage) of the Server processing areas.

Thumbnail

Displays a thumbnail of jobs as they image or render.

VirtualPress

Available within the RIPMonitor module. Allows for the assignment, alteration and management of plates to polled RIP jobs.
