

Lead Application Developer

You will improve the experience for our users, without compromising on performance, usability or accessibility.

Spearheading the efforts to develop best-of-breed Windows applications in a company with a proven track record in restoring customer's online privacy and anonymity. You will take advantage of the latest and greatest technologies available on iOS and Android platforms to help build innovative mobile apps that our users love.

The environment is an open-concept loft space alongside an experienced team who work under Agile methodologies and share your energy and drive for excellence and desire to build great products.

What would you be doing?

- You will be responsible for architecting, implementing and continuously improving the suite of Windows desktop applications & track and drive adoption of new Windows technologies.
- Provide mentoring and guidance to team members

What do you need?

- Experience with MVC application frameworks such as QT 4.x/5.x, .NET 4.x
- Experience with open-source projects such as OpenSSL, OpenVPN
- 3-5 years of professional and/or personal mobile development experience
- 1-2+ years experience leading and mentoring team members
- Deep understanding of iOS and Android platforms and APIs
- Minimum of 5 years of experience as a software developer. You should be comfortable writing code in C++, C#, and/or C
- Experience designing and implementing RESTful API clients
