PRESS RELEASE

SolonTek Announces Domestication in **Delaware**

October, 2021 – SolonTek, is a North American provider of cybersecurity services and the developer of a cyber intelligence platform.

SolonTek Corporation

On March 30th, 2021, SolonTek shareholders and board members approved a resolution and plan to domesticate in Delaware.

"This decision makes sense as we expand throughout the United States beyond North Carolina. We are moving to Delaware but we will be keeping our offices and presence in North Carolina, and we are currently in the process of opening offices in Florida and California. We do not expect any impact to clients, VALKERIE™ users or partners." - Sara Spencer - CEO

SolonTek chose to move to Delaware because of Delaware's corporate experience and corporate law. Corporate attorneys are more familiar with Delaware business law and many of SolonTek's clients, alliances and partners prefer to do business based on Delaware law.

About SolonTek Corporation

SolonTek is a Cybersecurity Service Provider offering compliance training, internal auditing, and implementation. SolonTek has developed a cyber intelligence platform VALKERIE™ to manage ISO, CMMC, NIST, HIPAA and SOC2 compliance that provides real-time continuous monitoring of security controls, allowing for intelligent automation and control verification for trust frameworks. It seamlessly integrates with the data in an existing compute environment or can be an all-inclusive solution with built in vulnerability scanning, third party application security, identity, and access management and more. Creating a data-lake for one source of truth, and in one pane of glass. This proactive visibility to detect, analyze, and mitigate cyber-breaches before they occur not only saves money but frees up Executive and IT teams to focus on more important tasks.
