General Consultancy

Circuit Security is a leading provider of comprehensive security solutions designed to protect people, assets, and information. With a focus on innovation, reliability, and proactive risk management, we deliver cutting-edge security services tailored to the needs of modern businesses, individuals, and high-profile events.

Security Service:

Security Guarding: Highly trained security personnel for on-site protection at offices, residential complexes, events, and critical infrastructure.

Surveillance Systems: Installation and monitoring of CCTV cameras, motion detectors, and advanced surveillance technologies.

Access Control: Biometric systems, keycard access, and other solutions to restrict unauthorized entry.

Perimeter Security: Fencing, barriers, and intrusion detection systems to secure property boundaries.

BIOMETRIC

The majority of commercial biometrics technologies involve physiological measurements which are considered to remain steady over relatively large time interval. Such measurements may include the following;

modalities:

- face recognition
- Facial thermography
- fingerprint recognition
- Hand geometry based recognition
- Iris recognition
- Retina recognition
- Vascular pattern recognition

Circuit Consultancy provides a suite of enterprise solutions for biometric patient identification, workforce management, single sign-on and automated biometric identification. Which can be centralized biometric network, authentication the user who needs to be authenticated is physically present at the same site with the sensor while the recognition process takes place on a general - purpose computer or server, located some distance away from the sensor. The remote access is granted or rejected based on server decision which communicates with the sensor

Security Surveillance CCTV

Circuit is committed to developing CCTV systems which meet the requirements of specifiers, installers and end-users. Our CCTV systems have evolved through a commitment to innovation in response to customer feedback. We have taken full advantage of the very latest technologies to deliver solutions which are flexible, reliable and cost effective.

Total digital video and audio recording system that provides continuous CCTV recording, archiving and debriefing capabilities that meets the needs of today's demanding security environment. The complete solution for high-level security. Alternatively, the stand-alone CCTV systems, which provides visual display of specific areas of plants or buildings

Project yourself from danger before it is too late, the environment is not fire hazard free any more. Hence, Circuit will treat you surrounding with our state of the art fire safety. From automated, conventional and manual system

Fire Safety

This fire alarm is a unit made of several devices, which uses visual and audio signalization to warn people about a possible fire, smoke, or carbon monoxide occurrence in the area of coverage. Fire alarms are usually set in fire alarm systems to provide zonal coverage for residences and commercial and domestic buildings

Solar energy is radiant light and heat from the Sun that is harnessed using a range of ever-evolving technologies such as solar heating, photovoltaic, solar thermal energy, solar architecture, molten salt power plants and artificial photosynthesis

Solar Power

Circuit is a diversified enterprise providing scientific and technological innovation, energy applications, committed to the improvement of the living environment and international cooperation by energy-saving technology, green energy solutions. As one of the leader in renewable energy provider, we insists on integrating the advanced technology and professional design into every solution and blending the best service with the highest quality products, aiming at each client's satisfaction. Meanwhile we can offer OEM services as per your specific requirements, customize the solar system

Networking

Today, computer networks are the core of modern communication. All modern aspects of the public switched telephone network (PSTN) are computer-controlled, and telephony increasingly runs over the Internet Protocol, although not necessarily the public Internet. The scope of communication has increased significantly in the past decade, and this boom in communications would not have been possible without the progressively advancing computer network. Computer networks, and the technologies needed to connect and communicate through and between them, continue to drive computer

The hardware, software, and peripherals industries. This expansion is mirrored by growth in the numbers and types of users of networks, from the researcher to the home user. Circuit provides hardware and associated software technology that is used to interconnect the individual devices in the network, through Wired technologies and Wireless technologies

Maintenance

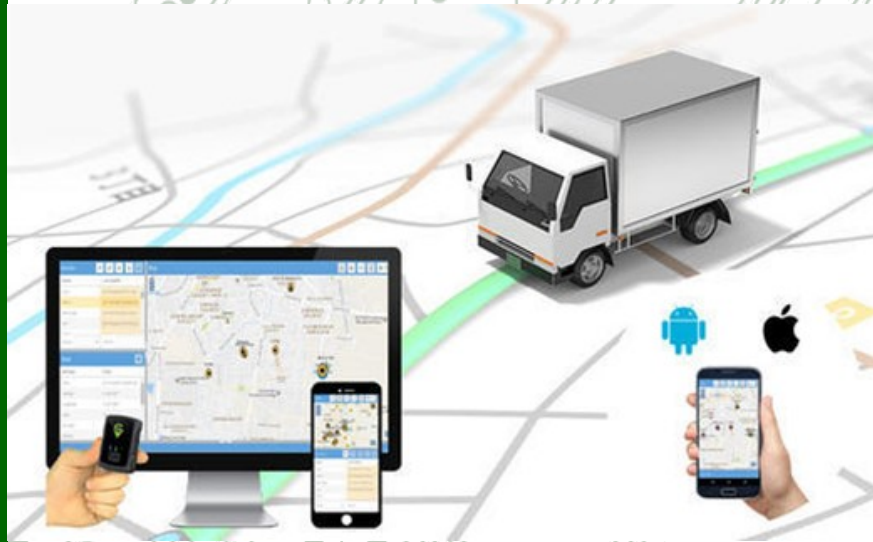

Forget about ICT problems; get maintenance services tailored to your needs. Your company's ICT maintenance is Circuit. With our ICT systems maintenance services, your data will be protected. We are specialized in providing our clients national coverage, adjusting out response time to their needs through immediate customer service attention, and response times of 2, 4, 8 or 16 business hours, wherever our clients may be.

Our ICT system maintenance services offer coverage for hardware equipment from multiple manufacturers, which allow us to offer hardware component substitutions without having to lose the manufacturer's guarantee.

GPS Management

At Circuit, we embed the latest technologies into our products to help businesses improve their operations and profitability. We offer turn-key solutions for staying connected to mobile assets anywhere in the Sierra Leone. We provide hardware, web-based software, and 24/7 technical support to our aviation, marine and land based customers

Web Services is a method of communication between two electronic devices over the World Wide Web. A Web service is a software function provided at a network address over the web or the cloud, it is a service that is "always on" as in the concept of utility computing.

Web Services and Graphic Design

Circuit provides a web design and graphic design, we create websites, develop brand identities, and do awesome graphic design for clients. Our designs are clean, stylish, professional and most importantly, effective.
