

Circuit

Security

## Executive Summary:

In an evolving security landscape, **Circuit Security** stands as a beacon of reliability and innovation in Sierra Leone. Established to bridge the gap between traditional guarding and modern electronic defense, we provide a "closed-circuit" ecosystem of protection. From the bustling streets of Freetown to the remote industrial hubs of the provinces, we secure assets, people, and data. Our approach is simple: **Deter, Detect, Delay, and Defend.**

"In an era where security challenges are becoming increasingly complex, traditional guarding is no longer enough. At **Circuit Security**, we believe that true safety is found at the intersection of human vigilance and intelligent technology.

Based in the heart of Freetown, we provide a 'closed-circuit' ecosystem of protection—integrating **highly-trained security personnel** with **cutting-edge AI surveillance** and **solar-powered infrastructure**. Whether securing a critical mining site in the provinces or a corporate headquarters in the capital, our mission is to ensure that your 'circuit of safety' never breaks.

We don't just watch; we monitor. We don't just guard; we protect. With **Circuit Security**, you are investing in a partner that understands the local landscape and delivers international standards of reliability, 24 hours a day, 7 days a week."

## Security Guarding (The Human Element)

### Physical Protection & On-Site Security

Our guarding division is the frontline of our operations. We do not just provide "watchmen"; we provide trained Security Officers.

- **Corporate & Office Security:** Specialized personnel trained in concierge-style security, visitor management, and emergency evacuation protocols.
- **Residential Complexes:** Discreet yet vigilant protection for gated communities and private estates, ensuring peace of mind for families.
- **Event Security:** Crowd control and VIP protection for high-profile gatherings, conferences, and public events in Sierra Leone.
- **Critical Infrastructure:** Specialist teams for the protection of telecommunications towers, mining sites, and utility plants where zero-fail security is mandatory.
- **Training Standards:** All guards undergo rigorous **ONS-mandated vetting**, physical fitness drills, and basic first-aid training.

# Surveillance Systems & Access Control

## The "Digital Eye" and Controlled Entry

In a 24/7 world, human eyes need technical support. Circuit Security integrates the latest in "Smart City" technology.

- **Surveillance Systems (CCTV):**
  - Installation of High-Definition (HD) and Thermal IP cameras.
  - Motion detection sensors that trigger instant mobile alerts.
  - 24/7 Remote Monitoring Center capability, allowing for real-time intervention before a crime occurs.
- **Access Control Solutions:**
  - **Biometrics:** Fingerprint and facial recognition systems for high-security zones.
  - **Keycard & RFID:** Tracking employee movement and restricting unauthorized entry to sensitive server rooms or executive offices.
  - **Audit Trails:** Automated logging of every entry and exit, providing essential data for internal investigations.
- **Advanced Surveillance & Real-Time Monitoring**
  - **The "Circuit" Eye: Beyond Simple Recording**

At Circuit Security, we don't just install cameras; we provide a proactive defense shield. Our surveillance ecosystem is designed to catch threats *before* they escalate, using our state-of-the-art **Central Monitoring Station (CMS)**.
  - **Professional CCTV Monitoring**
    - **Live Virtual Guarding:** Our trained operators monitor your premises in real-time from our secure facility. This acts as a "digital supervisor" for on-site physical guards.
    - **Instant Incident Verification:** When a motion sensor is triggered, our team immediately pulls up the live feed to verify if it is a false alarm or a genuine breach, reducing "alarm fatigue."
    - **Remote Audio Intervention:** Our systems can include "Talk-Down" capabilities, allowing our remote monitors to speak through on-site speakers to warn intruders that they are being watched and that the Sierra Leone Police (SLP) have been alerted.
  - **Cutting-Edge Surveillance Hardware**
    - **High-Definition (HD) & 4K IP Cameras:** Crystal clear imagery that allows for facial recognition and license plate identification, essential for legal evidence.
    - **Thermal & Night Vision Intelligence:** Specialized sensors that "see" through pitch-black conditions, heavy rain, or fog—perfect for large perimeters and warehouses.
    - **AI-Powered Motion Detection:** Our cameras use "Human & Vehicle Detection" to ignore swaying trees or animals, ensuring alerts are only sent for actual security threats

## Perimeter Security & Infrastructure

### Hardening the Target

The first line of defense is the perimeter. We offer engineering-grade solutions to keep threats at a distance.

- **Physical Barriers:** Professional installation of high-security fencing, anti-climb wall spikes, and reinforced gates.
- **Intrusion Detection Systems (IDS):** Electronic "tripwires" and vibration sensors installed on fences to detect attempted breaches immediately.
- **Automated Bollards & Barriers:** Controlled vehicle access points for corporate headquarters and industrial parks.
- **Solar Integration:** To combat power instability, our perimeter electronics are powered by dedicated solar "circuits," ensuring the fence remains "live" and cameras stay "on" during blackouts.

## Compliance, Partnership & Contact

### A Partner You Can Trust

Security is built on trust and legal accountability. Circuit Security is a fully compliant Sierra Leonean entity.

- **Legal Compliance:**
  - Registered with the **Office of National Security (ONS)**.
  - Incorporated via the **Corporate Affairs Commission (CAC)**.
  - Fully cleared by **NRA** and **NASSIT**.
- **Why Circuit Security?** We offer a unique blend of local cultural understanding and international security standards. Our "Circuit" philosophy ensures that if one layer of security is challenged, another is there to back it up.
