

Jezus Speaker

The “Jesus” audio system is a conceptual high-fidelity piece that also functions as a decorative element. It was designed by Jan Gerdingh, who merged spiritual design with cutting-edge acoustic performance. During the design and manufacturing process, Jan collaborated with Chihiro Ishikawa, an acoustic engineer and his friend in Tokyo, who played a key role in determining the ideal dimensions and materials for the system’s speaker enclosures, ensuring exceptional sound quality. Additionally, Chihiro recommended the best components, such as speaker drivers and amplifiers, to ensure the system not only delivered top-tier audio but also stood out as a visually striking piece. After acquiring all the components in Tokyo, the audio system was assembled in Mexico City, resulting in a combination of functionality and aesthetics.
