Our company works seriously in the trade of biodegradable and compostable dishes, 100% free of plastics, aimed at restaurants, catheterization companies, retail stores and individuals. We have based the selection of our products under two important concepts: ecology, quality and design. All our items are made of all-natural materials of plant origin, from sustainable and certified crops, 100% biodegradable and compostable.

All raw materials are from renewable resources such as bamboo, maize and sugar cane (bagasse or bagasse), etc. which means that their natural regeneration rate is very fast.

Material

Corn starch

CORN STARCH or starch is a polysaccharide that is obtained from grinding the different varieties of maize. It is usually part of carbohydrates that are regularly ingested through food; in the natural state it is presented as complex particles that, in the presence of water, form low viscosity suspensions. Its composition is mainly glucose, although there may be other components present in less quantity. Corn starch should be preserved and stored in dry, cool places and should not be in contact with strong odors. It is an extremely versatile ingredient, presented as a very fine white powder that has a characteristic flavor.

Round plate
