

To find the length of receiver tubing for your new hearing aids, use the EarGear Measurement Tool below. To use, print the tools at 100% scale then cut both the right and left measurement tools out. Then place the tool over the appropriate ear. Pick the number that is the closest to the top of the ear canal opening. This ensures a more custom fit of the receiver once on your ear.

*Print the EarGear tube measurement guide at 100%. Cut out image and place over ear. Line up number with the top of ear canal opening.*
