

# 一次性手术解剖器

DISPOSABLE SURGICAL DISSECTOR

手术需要，尽在金柏威

## Product introduction

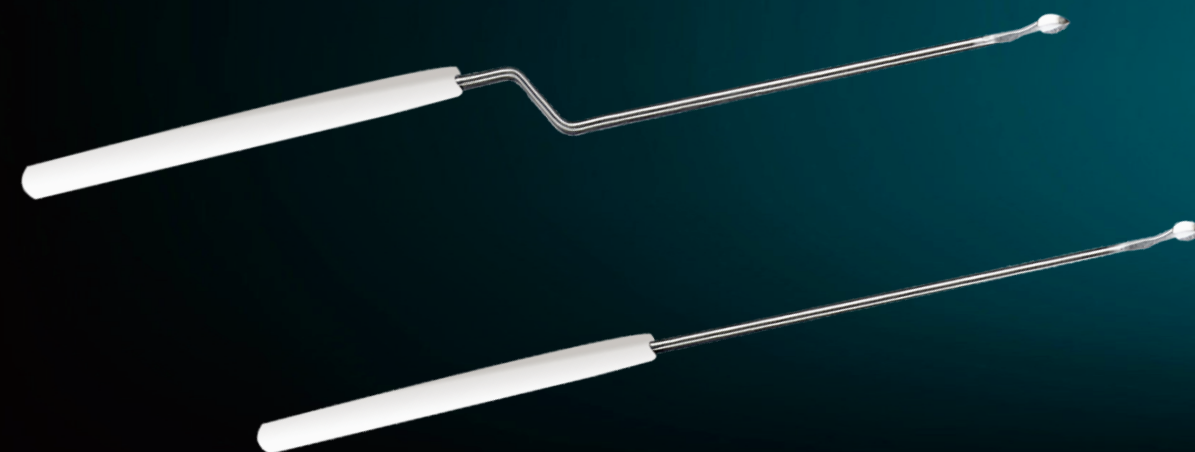

- ◆ Used for fine dissection and dissection of blood vessels and soft tissues in surgical or microsurgical procedure;
- ◆ Lifting and cutting are completed synchronously to protect the tissue from damage;
- ◆ The incision is neat and convenient for postoperative suturing;
- ◆ Single handed grip and operation, suitable for narrow range surgeries such as small bone windows, convenient for clinical operations.

\*Complete models and specifications to meet various clinical surgical needs

## Transnasal sphenoid dura mater anatomy

### Product features

- Special grade stainless steel blade for smooth cutting
- Curved smooth lifting surface, complete lifting and cutting simultaneously
- Smooth blade back, protecting contact surface tissue

Dissecting knife

Straight cutting knife

Stripping knife

Curved cutting knife

### Application

Neurosurgery, Microsurgery, Spinal Surgery

### Advantage

1. Breaking through limitations of traditional dissecting knives, the warrior knife head design, It is specifically designed for clinical puncture and cutting of tissues such as blood vessels and nerves.
2. The blade edge is sharp, especially for blood vessels with severe calcification, which reflects its powerful puncture and dissection performance.
3. Different sizes of knives are suitable for various special surgical site requirements, making it convenient to approach from different angles and directions, ensuring cutting and peeling of deeper areas.
4. The curve design makes the peeling function of the peeling knife more perfect, with better visibility, higher safety, and less damage.
5. Applied under a microscope to separate and dissect microvessels, nerves, meninges, skin flaps, etc.
