

Task-based VR Language Training.

Rapidly develop authentic language skills by practicing meaningful tasks with a live instructor in virtual reality

**EXPERIENCE THE POWER OF VR LANGUAGE
TRAINING TODAY**

Who We Are

THE BEST VR LANGUAGE LEARNING EXPERIENCE ON THE MARKET

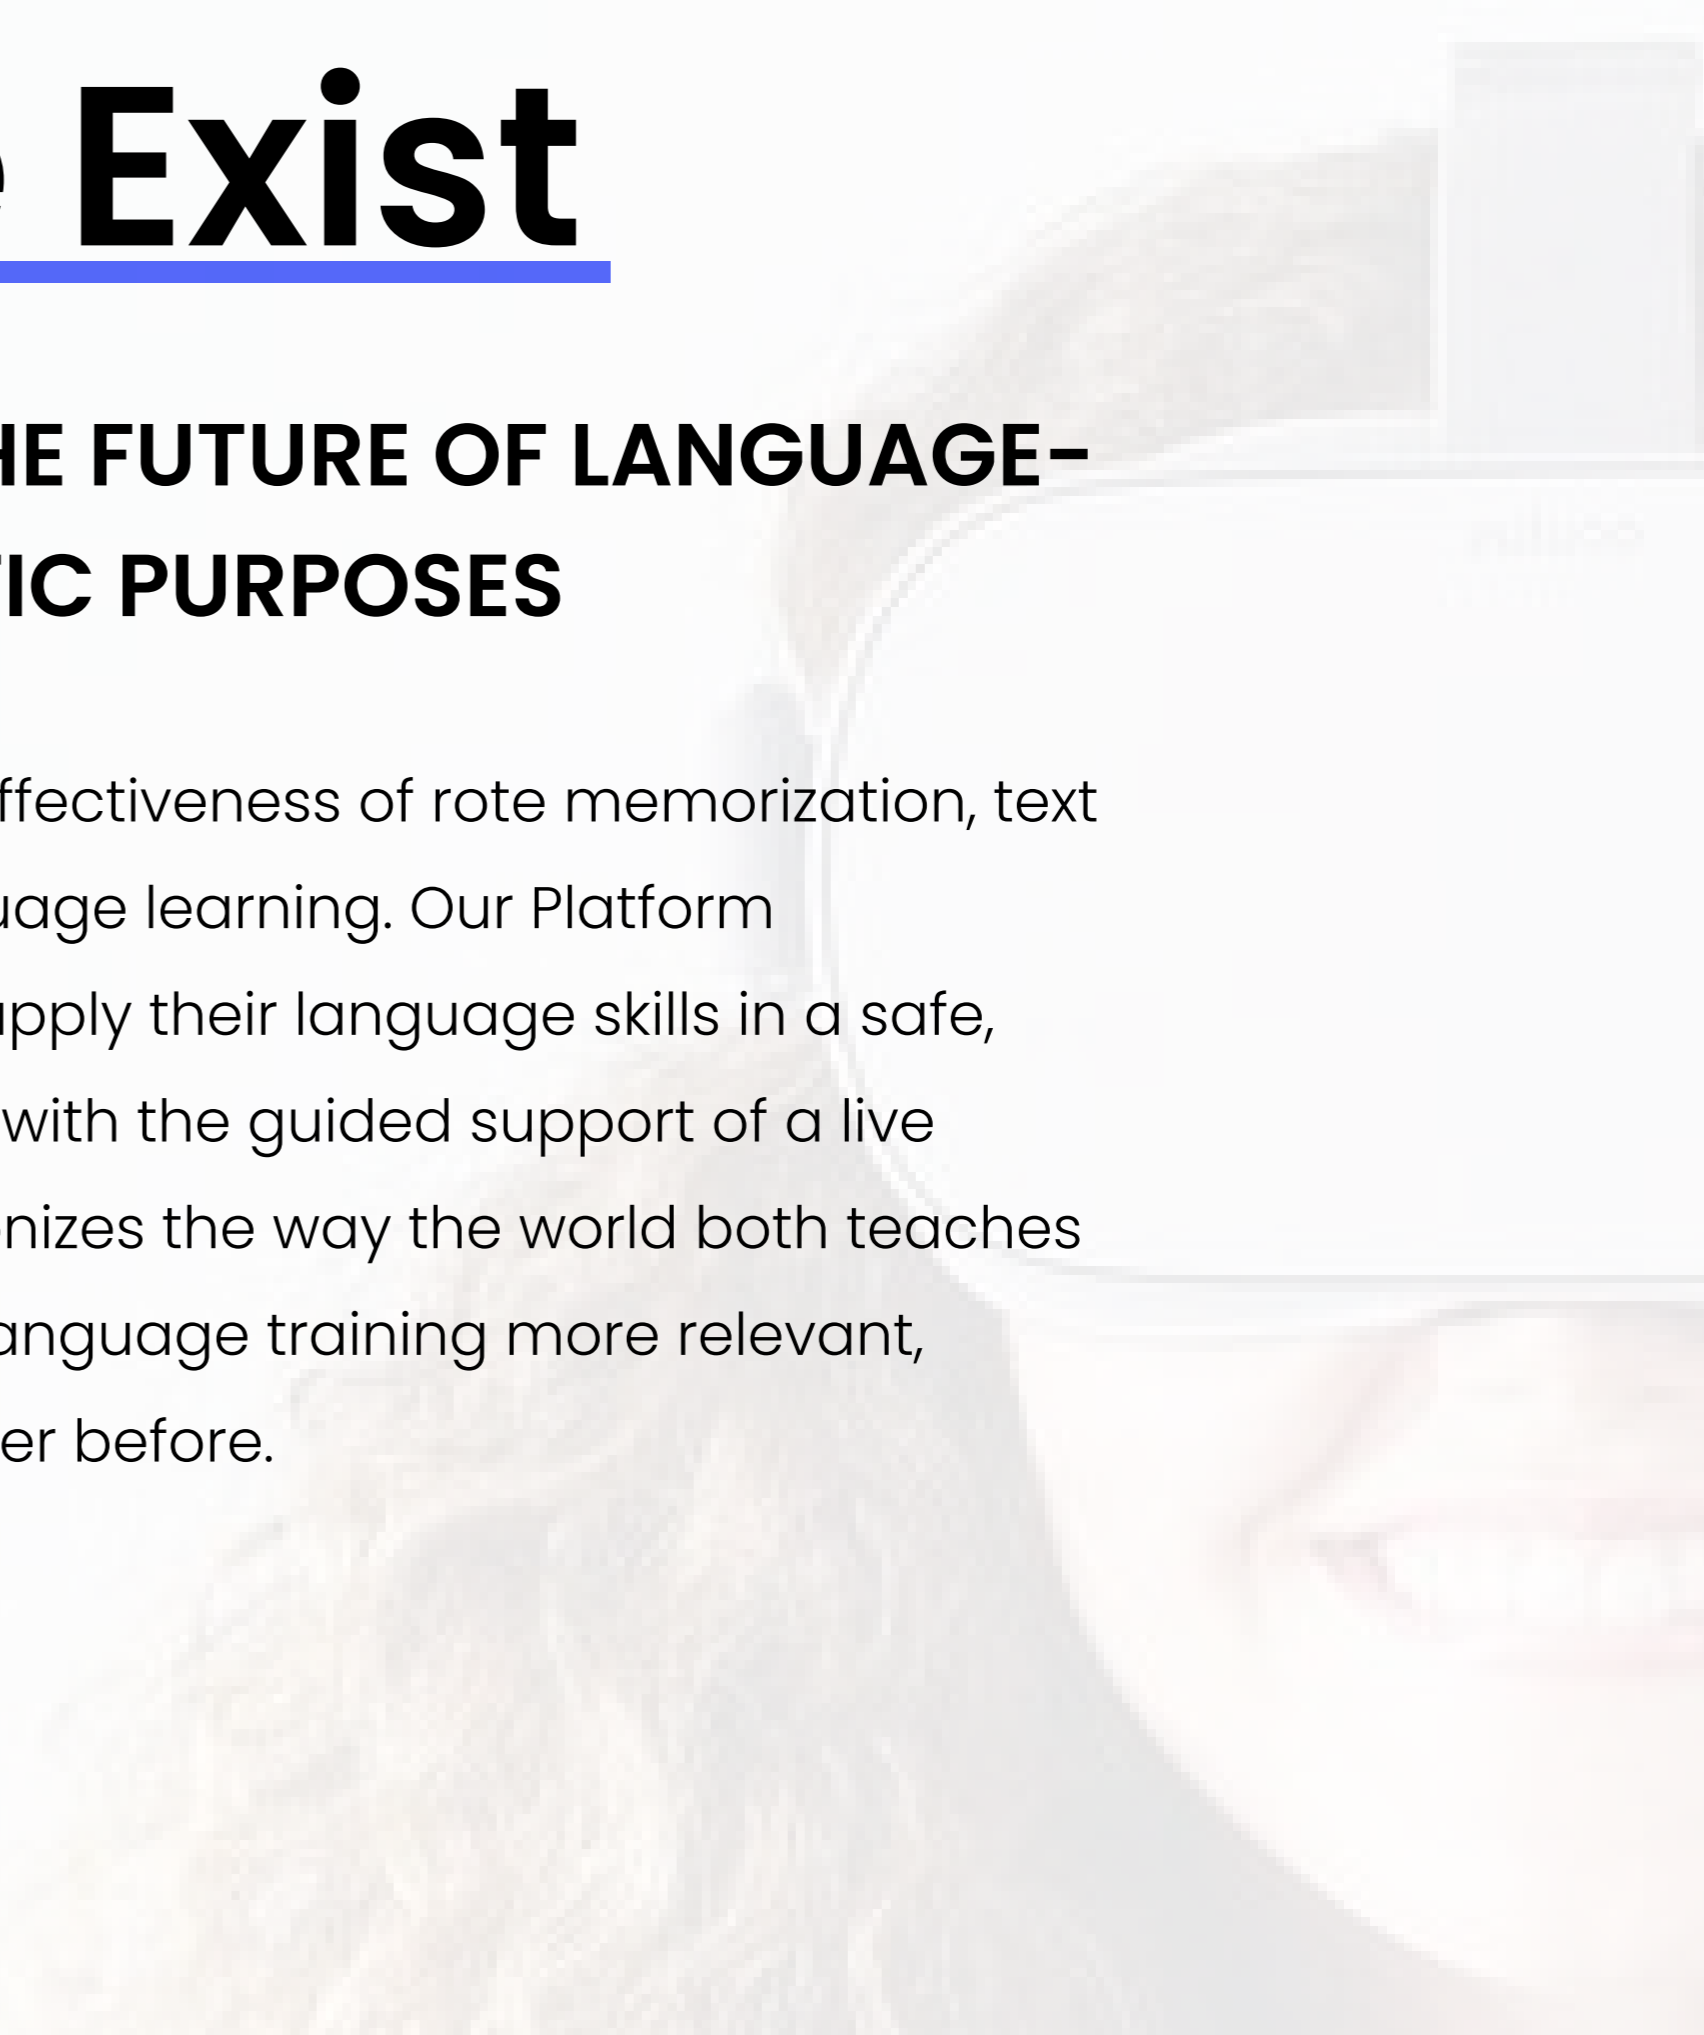

We are a team of VR engineers, linguists, and instructional designers who developed the world's leading task-based virtual reality language platform. We provide a distraction-free learning experience in which learners can move from review of language forms to authentic task-oriented experiences that stimulate fluency in the target language.

Why We Exist

VIRTUAL REALITY IS THE FUTURE OF LANGUAGE-LEARNING FOR SPECIFIC PURPOSES

We have all experienced the ineffectiveness of rote memorization, text books, and out-of-context language learning. Our Platform empowers learners to actually apply their language skills in a safe, fun, and authentic environment with the guided support of a live instructor. Our Platform revolutionizes the way the world both teaches and learns languages, making language training more relevant, enjoyable, and effective than ever before.

Pedagogy

WHAT MAKES OUR VR PLATFORM UNIQUE

As the first virtual reality company connecting teachers with students, it has been a privilege assembling a team of renowned linguistic researchers as well as a team of cutting edge VR engineers. Since 2017 we have focused on combining “Task-Based Language Teaching” (TBLT) with anxiety-reducing virtual environments in order to facilitate the best possible language-learning experience.

Our unique platform revolutionizes language-learning in **five** major ways:

First, the power of **accessibility**. It is the first tool making immersion available to all learners, of any skill level, located anywhere in the world.

Second, the power of **presence**. For the first time, learners are able to remotely experience a true sense of presence by embodying an avatar with the ability to explore and interact with the virtual environment.

Third, the power of **facilitation**. Immerse transforms instructors into hosts facilitating a language experience. Our immersive scenes and instructor training quickly equip instructors to lead dynamic lessons that captivate students and keeps them engaged.

Fourth, the power of **tasks**. Instead of organizing learning around grammar or vocabulary, we’ve implemented the best practices from TBLT research to organize classes around tasks as the fundamental organizational unit. By doing so students implicitly master the building blocks of language while building conversational skills that are real-to-life.

Lastly, the power of **confidence**. Far too often people attempt to speak in a foreign language context and are left mumbling, crippled with anxiety. Immersive training empowers learners to overcome fear of failure and successfully perform the communicative tasks that are most important to them.

STEPS TO GETTING STARTED

1 Adapt Curriculum

Our powerhouse team of VR instructional designers, linguists, and VR engineers collaborate with your content team to adapt your existing curriculum best suited for VR into our VR application. With VR you don't start over, you enhance the curriculum you already have.

2 Train Instructors

Our training team will equip all of your instructors with a full suite of "training-the-trainer" resources. From the basics of starting a lesson to learning how to best facilitate a lesson, we've thoughtfully curated all the training content necessary to transform your instructors into VR language facilitators.

3 Start VR Lessons!

Let the language learning begin! Learners will use the Immerse VR application to meet their live instructor in VR at their lesson time. Throughout the duration of the VR language training, we will perform assessments to track and manage each student's growth in language proficiency
