

## cUBIK Token — Unique Opportunity to Purchase Uranium Below Production Cost

IMC Invest, an international mineral exploration company focusing on uranium, gold and platinum group metals, is issuing the **world's-first cryptographic uranium token called cUBIK**, which is **backed 1:1 against 3,000 tons of independently audited** uranium reserves defined to JORC (Joint Ore Reserves Committee) standards in Kyrgyzstan.

**Tokenized physical assets bring more effectivity, security, transparency and liquidity to commodity trading.** cUBIK leverages these developments for both uranium investors and blockchain enthusiasts, and at a pivotal moment for the uranium market.

**Demand for uranium is currently rising sharply**, due to its peerless efficiency and the ecological benefits of a zero-carbon fuel. According to experts, neither solar, or wind power are capable of satisfying the global population's energy needs — while uranium is a cheap, efficient and green source of energy and **arguably the best solution to an emerging world energy crisis**.

Due to this development, the forecasted requirements for uranium in the near future significantly exceed estimated total uranium production. As a result of this uncovered demand, projections expect **demand for uranium to rise roughly 40% by 2025** (according to David Wang, analyst at Morningstar).

IMC Invest, operating since 2004, has been working on the current uranium operation (Kamushanovsky Project) since 2007 and the critical **initial stages of exploration and trial production have already been completed**. The **cUBIK token** is now in a pre-sale to raise funds needed to prepare the mining site and finalize uranium production.

**cUBIK token serves as a secure, unique and unfalsifiable proof of ownership rights.** A smart token issued on the Ethereum blockchain allows for easy supply chain tracking in the future.

Each token represents 1 pound of finished uranium product (U<sub>3</sub>O<sub>8</sub>). During pre-sale, cUBIK tokens are available at a price significantly below the current spot price, with the first 500,000 tokens selling at \$10 each.

cUBIK presents a unique opportunity for traditional commodity investors to purchase uranium **below production cost and significantly below its current spot price**.
