

yukon
charlie's®

A woman in a bright yellow ski jacket and teal pants is the central figure, smiling and using trekking poles and a snowshoe to navigate a snowy slope. In the background, another person in a camouflage jacket is also skiing. The scene is set in a snowy forest with evergreen trees and a clear blue sky.

CHOOSING THE RIGHT GEAR

Are you an outdoor adventurer? A trail-walking snow lover? A parent sharing the beauty of nature? Yukon Charlie's has the gear you need to elevate your experience. Choosing the correct gear is easy: our line of products come in a variety of shapes, sizes and materials. Each product we develop is suited for a person's choice of terrain, whether they are walking, hiking, or running.

Our performance line of snowshoes is developed specially for the following types of outdoor activities:

- **ALL-MOUNTAIN** – Mountain terrains. Advanced hikers and backcountry enthusiasts. Snowshoes that are made with climbing style crampons and rugged bindings.
- **DAY HIKING** – Rolling terrains. Best for hikers and backpackers. Designed for intermediate terrains and are suitable for most conditions.
- **RUNNING** – Flat terrains. Best for runners or race walkers. Developed to support a runner's stride over the snow.
- **RECREATIONAL** – Flat terrains. Perfect for beginners. Designed for easy walking and ideal for families.

SNOWSHOE SIZING

To choose the right size snowshoe, there are two key elements to consider: **LOAD** and **CONDITIONS**.

CONDITIONS are categorized by a couple of factors.

- **POWDERY SNOW** – Powdery, dry snow calls for a longer length snowshoe with more surface area to keep the shoe afloat. These conditions may be present in fresh deep snow or in untracked backcountry areas.
- **WET OR COMPACT** – **WET OR COMPACT SNOW NECESSITATES A SHORTER LENGTH SNOWSHOE.** The compacted snow does not require a large surface area to keep the snowshoe afloat. These conditions may be present on groomed, higher trafficked recreational outdoor areas, or snow that has had time to settle.

LOAD is determined by your body weight and the weight of the backpack or belongings you're carrying. The longer the snowshoe, the more surface area it has in contact with the snow; therefore, allowing the snowshoe to provide more flotation (ability to keep you from sinking in the snow) in deeper powdery, dry snow conditions.

LOAD RANGE*	SHOE SIZE
25-100 lbs (11-45 kg)	7 in x 16 in
100-150 lbs (45-68 kg)	8 in x 21 in
150-200 lbs (68-90 kg)	8 in x 25 in
200-250 lbs (90-113 kg)	9 in x 30 in
250-300 lbs (113-136 kg)	10 in x 36 in

For example, if you are 145 lbs with a 5 lbs bag hiking on compact snow, an 8 in x 21 in is best suited for you. However, if you're 145 lbs with a 5 lb bag walking on a untracked backcountry, the shoe size you'll need is 8 x 25.

**Our Load Range listing is a recommended guide to help identify the approximate snowshoe size to choose. Please note that these are merely recommendations and snowshoe performance may vary based on current outdoor elements, environments, and terrains.*

SNOWSHOE COMPONENTS

WORKING TOGETHER

Yukon Charlie's boasts a wide-range of platform styles that feature key components to ensure your outdoor experience is the best it can be—whether you're hiking in the mountains or snowshoeing in the park. For every snowshoe, our performance components work together to provide you with secure footing you need. Here's an overview of our components and how they work together.

FRAMES

Frames come in various shapes and materials. Aluminum frames are lightweight, strong, and ergonomically designed to aid the user's stride as well as providing excellent foundation for flotation. Composite children's snowshoes feature a hard plastic material that forms the frame and deck in one single piece. These hard plastic snowshoes are lightweight and durable.

- **ALUMINUM** - Traditional rounded tail, and V-tail
- **MOLDED POLYPROPYLENE** - Single piece construction

DECKS

Snowshoe decking can be made of various components like plastic, coated nylon, PE or other synthetic materials. We offer two decks: one made from HDPE (high density polyethylene) and the other Tech Weave (coated nylon fabric); lightweight, soft and durable. HDPE is our thickest and most durable decking option.

- **HDPE** - Durable, thick polyethylene material
- **TECH WEAVE** - Lightweight, durable nylon fabric with a polyurethane coating

BINDINGS

Securing your foot on your snowshoe is achieved with multiple closure types: some are fast and some are smart! Our snowshoe systems range from dials that offer an infinite tension choice to a simple and secure, one-pull closure.

- **FAST FIT** - One pull single strap tightening system, single pull release cord
- **SPIN** - Spin dial cable tightening system, tightens the front section of the binding with just a twist of the dial, T-Bar release
- **SPIN II** - Spin dial cable tightening system, tightens the entire binding including heel strap with just a twist of the dial, T-Bar release
- **QUICK CLICK II** - Dual buckle ratchet tightening system, built in tab release
- **MINIMALIST** - Patented one pull single strap full foot tightening system with integrated heel strap and locking pin for a secure hold
U.S. Patent No. 11805849

HEEL STRAPS

At Yukon Charlie's, we have multiple types of heel straps, which work specifically with the binding to keep your foot straight and snugly in place. Keeping your foot straight is crucial to allow your snowshoe track straight and give you optimal balance.

- **SWIFT STRAP** - Unlimited range of adjustment with the pull of the strap, spring loaded locking tab keeps strap in place
- **RAPID LITE FLEX** - Pin locking adjustable rubber strap with integrated heel grip
- **RAPID LOCK** - Adjustable rubber strap with spring-loaded locking pin-tab, and integrated heel grip
- **BUCKLE LOCKING** - Side release buckle with adjustable webbing strap

AXLES

Yukon Charlie's boasts a wide range of axle types that have been specifically paired with the binding to provide you with the support and performance you need. The terrain you choose to venture impacts the type of axle needed. For inclines, you require more rotation in your step ascending/descending slopes. On flatter terrains, your feet require less movement to

keep your stride. And, on hard/icy surfaces, you require a softer foot plant.

- **FREE FLEX** - Torsion Strap Floating Solid Axle – Cushioned foot plant suitable for most conditions
- **ENERGY FLEX** - Single Piece Torsion Strap – Cushioned foot plant that returns the snowshoe to a neutral position
- **SNOW MOTION** - Smooth Rotating Solid Mount Axle – Solid foot plant with zero flex for improved balance
- **FREE FLOAT** - Torsion Strap Mounted Floating Straight Axle – Cushioned foot plant suitable for most conditions

CRAMPONS

Snowshoes feature teeth, similar to cleats, called crampons. These "metal teeth" help you grip the snow as you hike and walk. Crampons are available in various shapes and sizes. These are crucial to help you maintain a sure grip on the terrain or surface you choose to venture on:

- **MOUNTAIN CLAW** - 16 Tooth, Powder Coated Forged Steel – Solid traction for mountain terrains
- **SURE-FOOT** - 20 Tooth, Powder Coated Forged Steel – Strong Grip for walking on flat or rolling terrains
- **SPRINT** - 8 Tooth, Powder Coated Forged Steel – Lightweight, secure grip for flat areas
- **CUB** - 4 Tooth, Powder Coated Forged Steel – Secure grip for flat areas
- **FOX** - 8 Tooth, Lightweight Aluminum – Strong Grip for hiking on flat or rolling terrains

HEEL LIFTS

Heel lifts add an additional lift to your heel in the up position, lessening the stress on your feet and calves, adding additional comfort while conserving energy on steep uphill ascent. When not in use, they are retractable and tuck neatly away around the molded heel plate.

- **HEEL LIFT** - Adds 2 inches of heel lift in the up position for less foot and calf strain on uphill ascents

TREKKING POLES

Trekking poles are essential equipment for all outdoor enthusiasts. They offer enhanced stability and support on a multitude of terrains. Our poles are made of strong, lightweight aluminum and feature molded ergonomic grips, adjustable wrist straps, and quick, easy pole length adjustment. Poles also include interchangeable trekking baskets for hard surfaces and snow baskets for snowy conditions. Tough Carbide tips provide additional bite and support on slick surfaces.

- **FAST-LOCK** - lever adjustment system makes changing length simple and quick.
- **TWIST-LOCK** - easily adjusts by simply twisting the pole sections to lengthen or shorten.

ALL-MOUNTAIN SNOWSHOES

Kit includes aluminum poles with Fast-Lock adjustment, trekking & snow baskets, and durable carry bag.

NATIONAL PARK

Inspired by the vast beauty found throughout our public lands, this kit features performance snowshoes with a V-frame and a Fast Fit Easy-Pull binding system. Only available in a kit.

- **ALUMINUM V-FRAME** - Strong, 6000 Aluminum V-Frame reduces stress on ankles and hips with V-Tail for easier stride
- **HDPE DECK** - HDPE (High-Density Polyethylene) stiffens the snowshoe, for maximum power and flotation when snowshoeing through deep snow
- **FAST FIT BINDING** - One pull single strap tightening system with toe hold, single pull release cord
- **SWIFT STRAP HEEL STRAP** - Unlimited range of adjustment with the pull of the strap, spring loaded locking tab keeps strap in place
- **HEEL LIFT** - Adds 2 inches of heel lift in the up position for less foot/calf strain on uphill ascents
- **FREE FLEX AXLE** - Torsion Strap Floating Solid Axle – Cushioned foot plant suitable for most conditions
- **MOUNTAIN CLAW CRAMPON** - 16 Tooth, Powder Coated Forged Steel – Solid traction for mountain terrains

RUNNING SNOWSHOES

RUN

Built for running on the snow, these durable snowshoes are engineered with an ultra-strong frame and lightweight Tech Weave decking. The one-pull, single strap tightening and release system makes getting in and out of the snowshoe easy. The Run offers ideal flexibility and range of adjustment, allowing you to experience a great cold-winter endurance workout on the snow.

- **ALUMINUM FRAME** - Ultra strong 6000 Aluminum Rocker Frame provides strength and durability to the snowshoe
- **TECH WEAVE DECK** - Tech Weave decking offers a light, durable nylon fabric with polyurethane coating that remains soft in cold temperatures and is a bit quieter than other decking
- **FAST FIT BINDING** - One pull single strap tightening system, single pull release cord
- **SWIFT STRAP HEEL STRAP** - Unlimited range of adjustment with the pull of the strap, spring loaded locking tab keeps strap in place
- **ENERGY FLEX AXLE** - Single Piece Torsion Strap – Cushioned foot plant that returns the snowshoe to a neutral position
- **SPRINT CRAMPON** - 8 Tooth, Powder Coated Forged Steel – Lightweight, secure grip for flat areas
