

FORMULAIC FUNDING PROJECTIONS

Services will provide population based federal funding allocations by category from the BIL.

60% of the infrastructure law was designated as formulaic funding... has your agency received any?

The Bipartisan Infrastructure Law (BIL) was authorized in November 2021 and approved more than \$1 Trillion over 5 years for federal funding to be allocated to various infrastructure categories. Roughly 60% of the allocated funding is formulaic, which is based upon populations from cities and counties to create the proportional distribution of BIL dollars. Most local agencies do not know their allocations or the timing and processes associated with sub-allocations from the applicable state or metropolitan planning organization.

Your community deserves to understand its allocation amount and how to access the funding.

- Roadways
- Bridges
- Public Transit
- EV Network Infrastructure
- Climate Resiliency
- Water

Two years of BIL federal funding allocations have already been sent to all fifty states (California has already received ~ \$10 Billion)

Your public agency's population was used to calculate the amount of funding for your state

Customized funding projections for your agency will be completed for the categories above
