Electrical Project Supervision

Topic:

Electrical Project Supervision

Background:

Supervision was created and developed with intentions to better prepare supervisors with the tools and techniques to further excel within their roles.

Program Curriculum:

There are 3 levels to this supervisory program, each consists of approximately 12 modules. All courses are self-paced, online, where participants can complete according to their own schedule. At the end of each module is a short knowledge check where participants must achieve 70% (could be 80% - still under review) to receive certification.

Outcomes:

- Defining of supervisory roles
- Knowledge and understanding of supervisor's contributions to company's financial success
- Develops verbal and written communication skills
- Outlines legal frameworks related to projects and employee supervision
- Understanding of supervisor's roles and responsibilities regarding the safety of working environments and practicing safe working skills
- Illustrates on site management of tools and materials
- Understanding of contractual management
- Ability to oversee and develop employee productivity
- Capacity to plan, schedule, and coordinate job site productivity
- Capablility to outline database history regarding estimating costs and the management of cash flow
