

Doubts About the Renee Nicole Good Story/Photograph

January 8th, 2026 (Gregorian);

7-8pm (UTC-07:00); 6-7pm (US West Coast Time)

In my January 8th, 2026 (Gregorian) message, I mentioned seeing “peculiarities” in news reports, and suggested manufacturing (via IA) false stories was possible. *This* hastily written piece/story explains some of what I saw on the news January 7th and 8th, 2026 (Gregorian) that supports those concerns/possibilities.

First, back in very late September and early October 2024, when the One Hour War did not happen (that *non-event* was the tactical deception, which I have since thoroughly documented), I went online and speculated that it was conceivable that the US could have been largely destroyed, but could have manufacture an appearance of everything being fine, by using pre-produced news, entertainment and sports broadcasts, created by IA. Originally, I speculated that the US could only make this bluff work for maybe a couple of weeks (however, I went on to take the position that it was possible to make this bluff work for months, and promoted that view for about 7 months).

That speculation of mine may have been a source of inspiration for the US. If US elites knew they were about to be defeated in a nuclear war, to preserve the value of the US dollar, long enough to get their money in new currencies, and get to safe nations, they could transmit false news, entertainment, etc, to make the US appear fine, although it had been virtually destroyed. The fact that the US has withdrawn from 66 international organizations supports this possibility, as suddenly there is no face-to-face contact between the US and countries that could verify the US’ welfare.

The story about the Minnesota woman killed by ICE, Renee Nicole Good, also has some anomalies. But the actual photo of Renee (above) is most problematic, as the photo has some unnatural elements, which could have been deliberately (or incidentally) produced by artificial intelligence. I’ll show and explain on the next few pages.

This is a zoom of the previous photo of Renee Nicole Good.
Do you see any aspects or structures that seem unnatural?
On the following page, I've circled some of the areas that appear possibly falsified.

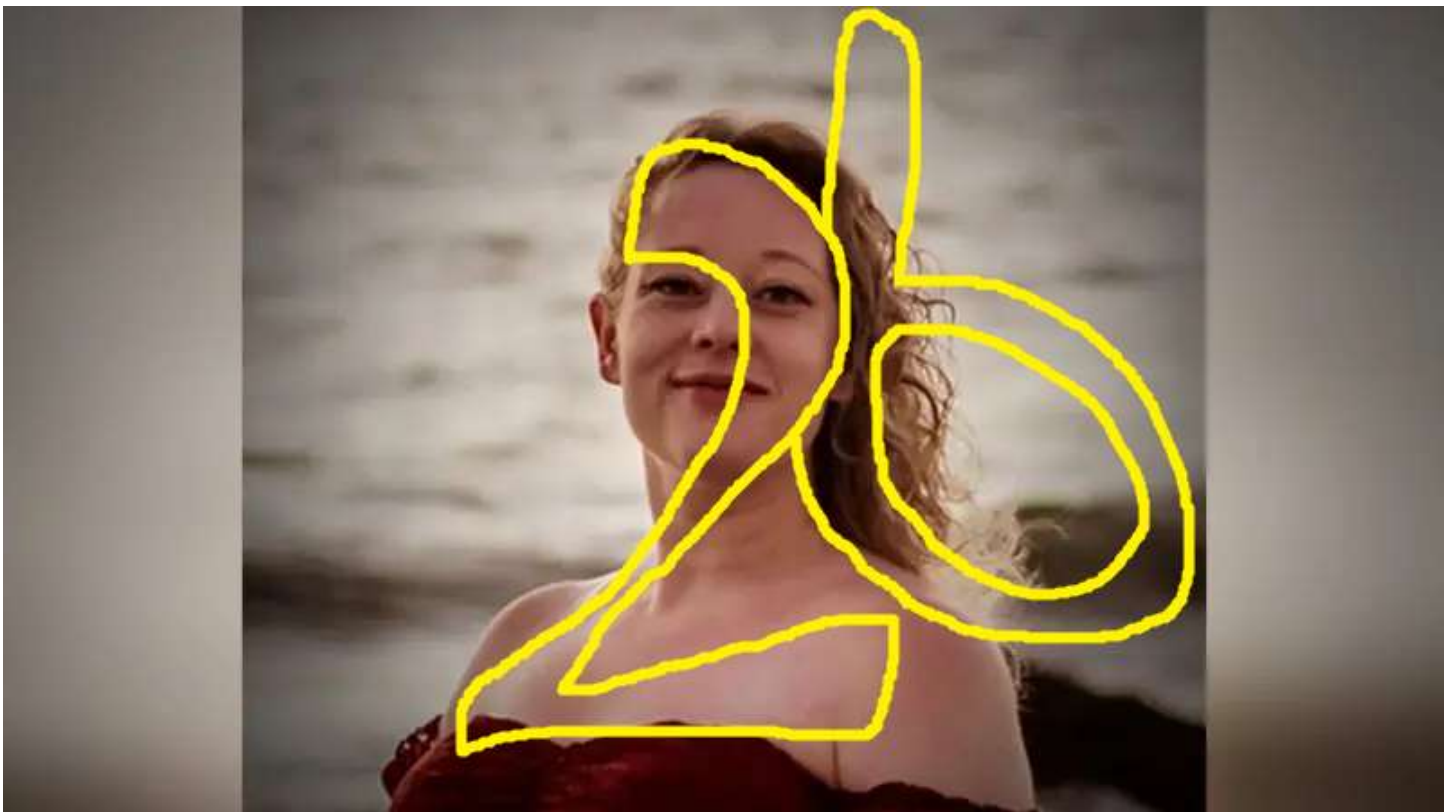

These are the 6 areas that look very artificial to me. I encourage you to zoom in and look closer at the nose and each of the other areas.

This is problematic because: if the image has been manufactured, then Renee may not exist at all. That could then mean that perhaps all news stories about Renee have been and are being manufactured by AI... Although Renee's story may very well be true, on the following pages, I've outlined some areas where the numbers that form Gregorian date of the One Hour War (1/7/26) are present in her image...

1 and 7 (January 7th) above; 26 (2026) below.

More expressions of 1/7/26, above and below.
