

Around 8:05 PM, I checked the USGS, to see if there were any earthquakes where I requested for today (in the Arizona and Texas area), and there were two earthquakes there, both near the southern border of Texas and New Mexico (NM is between Texas and AZ –a geography wiz I am not). One of the quakes was 3.7, the other was 2.6. There was no volcanic eruption in the area I requested. I thought the eruptions in areas with no volcanoes (or few volcanoes, etc) was a stretch; but why not ask? My requests are in *The Terms*, at www.TheZoneResistance.com.

III. **Oct 15th, (Jul); Oct 28th**, 2026. **Jesus, please grant my prayer that...** You will cause an earthquake in the AZ/TX, US area, and an eruption in the US Northwest.
