

# Welcome to Student Safety Alert

## Getting Started with Us

Our onboarding process begins with an introductory meeting with your district and the Student Safety Alert team. We'll discuss your district's specific needs, explore potential existing crisis support partnerships and interventions, and outline how our service can be customized to enhance your safety measures.

## Customizing Your Experience

Following our initial meeting, we work closely with you to complete a detailed questionnaire. This step is crucial for customizing our response to various alerts, confirming the information that will be communicated to parents, and establishing the most effective protocols for handling different situations. Our goal is to ensure that our service complements your existing safety measures and enhances the overall security and well-being of your students.

## Engagement and Education

To ensure a successful launch and foster a strong partnership, we provide digital materials in both English and Spanish for staff, students, and their families, explaining the vital role Student Safety Alert plays in student safety. We offer presentations for school staff and community members, further highlighting the importance of our service and how it operates. This educational phase is key to ensuring everyone involved understands the functionality of our alert response system, paving the way for a safer school environment.
