Clopyralid is a chemical which can travel (seep or leach)through soil and under certain conditions contaminate groundwater which may be used for irrigation or drinking purposes. Users are advised not to apply colpyralid where soils have a rapid to very rapid permeability throughout the profile (such as loamy sand to sand) and the water table of an underlying aquifer is shallow, or to soils containing sinkholes over limestone bedrock, severely fractured surfaces, and substrates which would allow direct introduction an aquifer. Your local agricultural agencies can provide further information on the type of soil in your area and the location of groundwater.
