**MRI OF BRAIN WITHOUT AND WITH A PARAMAGNETIC CONTRAST AGENT-
CONTINUED**

FINDINGS-CONTINUED

When comparing to previous examination there has been a significant increase in the size and number of white matter lesions.

IMPRESSION

There are extensive white matter lesions present within supratentorial and infratentorial structures as described above. These findings are consistent with MS, and specifically there is a large load of MS plaques present. Additionally there are numerous lesions demonstrating pathologic enhancement, consistent with active MS lesions. When compared to previous MRI dated 11-30-04 there has been a significant increase in number and size of lesions.

A handwritten signature in black ink, appearing to read "David S. Williams, M.D.", written in a cursive style.
