# A COMPREHENSIVE DATASET ON DISINFORMATION

Project Evergreen surveys the global landscape of disinformation and misinformation policies with the Global Disinformation Policy Database (GDPD) project. This database raises crucial questions about how governments worldwide define, approach, and combat these issues. The GDPD team is committed to providing a comprehensive dataset by collecting and coding laws and policies, making government actions comparable. Through a refined coding scheme, we aim to showcase the varying characteristics of disinformation policies across the globe. Join us in unlocking a new realm of research into the intricate world of "disinformation policy."

# EXPERTISE GAINED HANDS-ON

Disinformation policy expertise consists of many valuable and nice skills. Through this project, I learned how governments worldwide tackle disinformation, mastering Advanced Search Strategies in a diverse research team. I also develop public scholarship skills, translating GDPR findings for policymakers using writing, data visualization, and structured analysis. I gained proficiency in iterative research strategies, design thinking, data manipulation, and AI integration. Ultimately, I was able to unravel the complexities of global disinformation policies through hands-on expertise and collaboration.

# LOOKING AHEAD IN THE DIGITAL SPHERE

Overall, working at the global disinformation lab provided a unique and valuable educational experience for me. It helped me develop a range of technical, analytical, and soft skills that are highly relevant to my field, as well as provide exposure to a range of different cultural and political contexts. By working to identify, track, and analyze disinformation campaigns, I gained a deeper understanding of the motivations, goals, and tactics used by different actors in the international arena, and contributed to the development of more effective strategies for countering these campaigns in the future.
