

Post-operative instructions for temporary crown/bridge

- Avoid eating or drinking for at least 30 minutes to allow temp cement to fully set up.
- Avoid eating hard or sticky foods, such as chewing gum, and chew on the opposite side of the mouth if possible.
- After anesthetic wears off the tissue around the temporary(s) may be sore for a few days
- Brush as usual, but floss with care. When flossing, remove floss from the side of the tooth.
- Contact us if the **crown comes off**, and save it so that it can be re-cemented.
- It is important that the temporary crown stay in place to ensure the proper fit of the permanent crown
