

Introducing the PWDCA Health and Litter Database

The PWDCA Health and Litter Database (HLD) Administration Team is pleased to welcome all PWD owners to join the database, and we would like to share some of its features and abilities with you.

The new database incorporates all the previous HLL information, except Comments, which are still accessible if needed. Your HLD Admin Team includes Karen Kirby Ash, Fred Forman, Jane McEwen, and Sara Chapman. We share work on all submissions, and an email to adminteam@pwdcahld.org will reach all of us.

The HLD is located at pwdcahld.org; it is completely separate from the PWDCA website. There are two categories of users of the HLD: Guest Users, who are any member of the public, and Participating Users. Guest Users can only see descriptions and pedigrees of dogs and litters.

Participating Users have entered PWDs in the database, and promised to keep their dog(s) information updated. Previous users of the HLL are already Participating Users of the HLD. They can go to the Home page, Logon, and use the 'Forgot Password' function if they do not yet have a HLD password.

Others who would like to be Participating Users should Submit Data to enter a PWD that they own, with registration or bill of sale listing them as the owner (only owners or breeders may enter information for a PWD). They should also enter their own contact information, checking the box to apply to be a Participating User.

We strongly encourage everyone to make their first stop at the Getting Started page, accessible at the Home page. This explains a lot of questions about using the HLD and includes a 30 minute introductory video. We have plans to make more short videos about specific topics, and a text user guide is also posted, to accommodate people who prefer different sorts of references!

The new HLD is an amazing repository of well-organized health and litter information for our PWDs. We currently have 38,500+ dogs, 9,100+ litters, and 1,100+ Participating Users in the HLD.

Introducing the PWDCA Health and Litter Database

The People page displays the contact information the person wants visible, as well as all PWDs owned, and litters bred.

There is a wealth of information about the dogs and litters including:

- Comprehensive details of physical characteristics of each dog plus registrations, DNA profiles, microchips and tattoos, and up to four photos per dog
- Health certifications for dogs including uploaded documentation
- Extensive pedigrees, with the ability to calculate coefficient of inbreeding (COI) on pedigrees of at least four complete generations
- Relatives of each dog, including whelp date and a chart with six health clearances
- Litter parentage, date of birth, breeders, related litters, and puppies
- Health information listed by diagnosis, including treatment and outcome
- Owners and breeders of dogs and litters

Information is only as accurate as its documentation, so the HLD requires documents for health certification, ownership, and parentage. OFA test results are downloaded quarterly; we will enter all of those and further documentation is not required.

The following information for close relatives was found in the database:

Sire Name	Whelp Date	AOD	Hips	Elbows	Eyes	Heart	GM1	PRA

Individual PWD data is just part of what the HLD can offer. You can also search Reports to look for dogs with certain Certification or Test results or with reported Health conditions. You can make a test mating between any two opposite sex dogs in the HLD, producing a Trial Pedigree, and calculate the resultant COI of that test mating.

Please take a look at the new HLD! Whether you use it to keep all your dog's data in a convenient place, or to research other dogs for breeding, it is easy and enjoyable to use, and your HLD Admin Team is ready to help!
