Tutor Profile

Hello, I'm Zeus! I have been tutoring for over 5 years now specializing in Math and Science. I have worked with various levels of students (K-college) and helping students achieve their academic goals is truly one of the most rewarding experiences.

I received my degree in Mathematics at the University of Southern California. During my 3rd and 4th year at USC I led a 1 unit math course that primarily focused on helping students strengthen their understanding of the subject. I've learned that every student is different, so I adhere to my students learning style in creative and interactive ways. My philosophy is based on encouraging students to think for themselves, using real-world examples so students gain a true understanding of the material. I look forward to helping your student excel in their studies!
