Science. Results. Trust.

Nordlys™

Advanced technologies, enhanced appearance

The Light & Bright treatment is a non-ablative treatment that works by delivering a combination of technologies designed to address surface level irregularities as well as affect the dermis, or middle layer of the skin. The Frax 1550 technology rejuvenates the skin by delivering very small, controlled bursts of energy only to the area being treated to reduce textural irregularities.¹ The heat produced, stimulates the dermis and the production of collagen. The Ellipse IPL™ technology refreshes the skin by using similar small, controlled bursts of light that directly target blood vessels or melanin within your skin, reducing the coloring of age spots, freckles, redness and overall sun damage.

of patients saw a lightening in pigmentation²

of patients felt their wrinkles were softened^{2,3}

of patients saw a reduction in vascular appearance²

A younger, fresher look

Looking for a successful treatment to help reclaim your skin's youthful look, texture, tone? Well, you are not alone. Youthful and glowing skin are the most requested asks from patients around the world.

As we age, our skin changes. It loses its smoothness, and unwanted pigmentation and small vessels can appear. Over time, sun exposure can accelerate signs of aging.

Now, with the new Light & Bright treatment, you can rejuvenate your skin by:

- ✓ Rejuvenating sun-damaged skin
- ✓ Reducing redness
- ✓ Lightening age spots, freckles and dark spots
- ✓ Improving skin texture

What you can expect

- ① Prior to your Light & Bright treatment, you and your healthcare provider will meet to discuss your treatment goals. It is important to avoid tanning (sun, tanning salons and self-tanning products) before and during the treatment period.
- ② The Light & Bright treatment consists of a course of 3 sessions, but this may vary according to what will be treated. Your healthcare provider will review with you how many sessions you may need.
- ③ Your healthcare provider may use an anesthetic/numbing cream to reduce discomfort. The treatment procedure will generally take between 30-45 minutes.
- ④ After treatment, your skin may benefit from applying a cold damp cloth to your face or from using an ointment prescribed by your healthcare provider.
- ⑤ You may notice a sloughing off of some skin or a darkening of some pigmented spots for a few days following the treatment. After that, you will find your skin looks smoother, fresher and glowing.
- ⑥ Talk to your healthcare provider about what you can expect with your individual treatment.
