

# D.

D-lamp is an elegant modular table lamp, made with recycled concrete.

The light source illuminates the curved part, which acts as a reflector, highlighting the material of the concrete.

Each module is independent, and can be connected with another via a 6.35 male-male jack (obviously the system is supplied with low-voltage current). The location of the connectors allows the modules to be combined with each other in all directions. The current transformer supports up to 8 modules together.

A refined aesthetic, which combines a form of austerity with the voluptuousness of rounding - an assumed heritage of the great aesthetic principles of Scandinavian functionalism from the beginning of the 20th century.

**Presented prototypes :**  
solid recycled concrete  
on weight reduction hemp fibers core  
12v led spot

**Dimensions :**  
20 x 10, H30 cm  
**Weight :** 1,8 kg
