

It was just 3-4 years ago that I was reading a book that had this weird line in it. On page 2, it said,

"This book, with its crumpled, torn, and time-stained leaves exhaling the odors of vaulted crypt and worm-eaten chest, exercised a peculiar fascination upon me. All day long, and often far into the night, I sat pouring over its musty and mildewed pages, quite forgetful of this surface world, and with the plummet of thought sounding these subterranean depths, and with the eye and ear of fancy visiting them, and gazing upon listening to the dwellers therein."

Then, on page 5, it reads,

"The learned Don Fum's chart will stand by thee as a safe and trusty counsellor. Remember, little baron, the motto of the Trumps, Per Ardua ad Astra – the pathway to glory is strewn with pitfalls and dangers."

Crazy old me took it seriously when they said, it was a cryptic vault. I just so happen to go to school for computer networking for a short period of time and coding (pseudo code to be precise) was my favorite class. It's a 011011011 binary language. And this made something click inside my inquisitive mind.

So...

That prompted me to create a cipher. First, I took one word, 'golubtchika' and broke it down into acronyms and found all the possible meanings for it. One of the first words was 'critical thinking' that caught my eye. I am a critical thinker. The next was 'cipher text,' and 'cryptography' was next, followed by 'cryptanalyst.' It was then, that I knew what the spirit was telling me was true. I was going to use my critical thinking skills like an cryptanalyst and I was going to cipher the text.

I'd like to take you on a journey through a cipher using my testimony. I will be using my testimony because the cipher was a gift to me from God Almighty. I once heard someone that I love with all my heart say, "deciphering military code, that's freaking crazy." And I almost gave up because I respect this person so very much. But, I realize that it is GOD who directs my steps. Not man. So, here I am writing a book to give all the details. I tried other means, but the powers that be simply won't let it happen.

Then I spent a couple of years fumbling through that cipher I created. What really boggled me was how the contents seemed eerily familiar to what I'd

witnessed all the years in the wilderness (when I was being hunted like a wild animal, by my own peers, and then, my own flesh and blood...)

Oddly, the more I studied it, the more I was able to identify all the secretive operations - that I knew I was enduring and seeing transpire - that others claimed I didn't.

They told me, "You're crazy." They berated me to tear me down. Now I know why. With my hand on my face. I exclaim!

Umm, no. They're delusional!

I almost bought that lie. In fact, for many years I traversed the earth lost, thinking I'd lost my mind. I sunk myself into drugs and tried to tare up any and everything that came into my path. What use was it to love and be good?

Oh, how I was wrong. But the truth of the matter was. I also was feeling things and thinking things that someone else was projecting. I will do well to explain that in more details later.

This book is dedicated to all those who felt the need to call me names, and felt the necessity to kick me while I was down, may it teach you those things your parents didn't. And I pray that it brings you to a point of introspection. May it help you to face the you that has no good intentions.

To all of you who don't know me from Adam to Eve. My name is Carmen. I am what people call a targeted individual who has been hunted like a deer by my own government and that expanded into my family and friends. My own blood family had it in mind to have me murdered! Can you believe it? Oh, I couldn't either. Heck, I'd never had thought this if God didn't make it plain. Anyhow, I consider myself a survivor, a protected child of the Most High (EL the Supreme) Elyon (the Highest), aka JESUS, who has a special mission. Part of that mission will be disclosed in this writing. It would appear there are a lot of Esau's in the world. People will do almost anything for money. You may not understand what that means - yet - but you will in due time.

As a believer in the gospel message my testimony is true. It will not be sugarcoated for even the many unbelievers (who I feel adamant about sending this book to.) Those of you who don't believe in Jesus, or if the way you believe is different than mine, don't stop reading this on that basis.

Einstein said it best,

"Condemnation before investigation is the highest form of ignorance."

Besides, if you stop reading this before the end, you're doing nothing more than denying yourself detailed information that will not be presented to you in any other kind of way, which affects you and your loved ones. The information within this book is priceless – truly. Although, there are many on the inside who would charge you hundreds for half of what you will find herein. No one really has this sort of information – unless they are in the inside at the highest order, and if they were, they aren't going to give you this. Let alone for free.

In some weird way, this story is a huge part of my life. It started many years ago. I was a normal college student, on the Dean's list, raising three very active children while helping to take care of my mother with her needs, volunteering in the school, and trying to run a small business on top of dancing in the night clubs to make ends meet. Not to mention, there were a few kids that I would help to ensure they had their needs met. I was a giver and not a taker. It was something I was given the night I met the Messiah.

It was a busy life. And I can't forget that I also liked to party, play Texas hold-em and bingo, and spend nights going to gamble when I could get a little free time away.

Life quickly changed for me over the course of a year around 2005. Doctor visits began to happen every six weeks, then every four, until one day, I woke up bleeding from everywhere after having a fever of 103.7 - for just over 30 hours. My body was shutting down. Thirty days prior to this, the doctor told me I needed a psychiatrist to help me. This was after visiting his offices 12-16 times over the previous year. Complaining of foggy head, bowel issues, joints hurting off and on, and low-grade fevers (similar to the ones I'd had as a child). I cursed Dr. Gahl out when he told me that. Like, why would I be faking weight loss, hair falling out, sore joints, and all the other symptoms I had? It made me so mad! I was extremely angry, and rightfully so. It was 30 days later when I was told, "you need to write your will. You're going to die, and you should make sure your children are going to go where you feel they are best to be without you."

Wait!!

What??

I went from going to the doctor - all year long at least a dozen times and being told "you need a psyche doctor," - to a "you're going to die patient."

What was going on? Was I in the twilight zone? How did I end up so sick? What caused the Doc to suggest I see a head doctor for all my ailments not closely related to anything mental? How did the doc overlook the illness that now sought to take my life?

How would you feel about that situation?

I wasn't happy.

The doc who told me, I needed to write my will, is not the same Doc who told me to find a psyche doctor. I had gone and found me a new doctor quickly after I was insulted like that. I knew I was sick. Just not how sick. Or what I was sick with. Anyhow, when that doc said I needed to will my kids out I cursed him out too.

Later, when I was released from the hospital. I met the doc in the elevator as I was leaving. I apologized for cursing him out. He told me, "Thank you. I needed to be reminded of why I came into the profession." I liked Dr. McCallister. No one else did - but me - and now, I think I know why. The reason makes me like Dr. McCallister that much more. He didn't go along with the 'program.' Like so many other sell outs have and will continue to do - until the day of judgement.

None of what we have been taught is true. Lies have inundated society from the day we left the womb. This is why my testimony must be told, shared, and (hopefully) considered by as many people as God would feel this would help. A driving factor for me (in my life) is to help people reach the truth. I'm not a teacher. However, I've heard people's testimonials that weren't teachers and they taught me something through their journeys. I hope my testimony can impact you in the same way or even more so.

Funny thing though, this book isn't anything like the normal Christ centered book you've ever read (if you've ever read one). I can assure you I know this book is unique and unlike anything you'd have ever heard. If I'm wrong, when you're done reading this send me your input as to why.

So, let's get into the guts and glory of this testimony that affects every human on the face of the earth. The book, the marvelous underground journey of Baron Trump and his wonderful dog Bulger, is the culprit that led to the madness I'm about to spend time explaining. It's what one could call a **cipher book** that needed **cipher text** applications. As I just told you. I created a cipher because of that book and that is where all this information comes from.

Believe it or not, it's about securities, stocks, crypto's, what's driving the markets, companies that will excel over the years, technological advancements in the medical field, nanotechnology, biotechnology, land changes, and...

Military movements worldwide...

Russian intelligence, Chinese intelligence, Canadian intelligence, and more. The list is astounding. You will have a hard time believing this to be true without evidence. So, I'm going to give you all the evidence you need.

Believe me or not, I almost can't believe it either.

I don't want to seem repetitive, however, for the sake of being extremely clear about what I'm conveying, it would appear to be beneficial in some ways.

As I said, the book is a top-secret message transmitted in the highest order from the leaders of this world. I, listening to the Holy Spirit, created a cipher that told me so much, my mind felt like it was overflowing with too much information at times. Not to mention, it did keep me looking deep into its contents so that I could get the full picture of how they hunted me, kept track of me, kept hacking my accounts, would pose as me on the internet. I've had people tell me I was selling my body on Craigslist, even when I wasn't. Who was making them posts that I didn't make at the time? I wanted to know. With over 60 names that needed to be broken down into acronyms and documented, there was a lot of work.

Work they kept destroying.

But I refused to give up.

So...

there's that.

The cipher contains what I call 'key terms' that form Don's mysterious Directions. If you've read the book you'd understand. If you haven't read the book, you may not. I don't suggest reading witchcraft. However, Don's mysterious directions were lined out in that book in a cryptic code. If you want to understand this writing, I suppose reading that book and the following one (called the Last President) would be wise. Oh, and since there are two of these books with the same name, reading the previous book (posted on my website) would also be an option. Anyhow, I've included a copy

of the book Ingersoll Lockwood is said to have written as an attachment with this book.

You choose to do with it as you may.

Anyhow, in the book Ole Don was supposed to be telling Baron how to get into the World Within a World.

WWW is 666

The reality of that is, Don was transmitting a message to top tiered people (the world knows as the shadow government) who have very prestigious and powerful positions. He was telling of fires, hurricanes, food distributed with toxins, and more that would be carried out over the course of five years. I'm not sure if we are in year 3, 4, or 5 right now. I will explain why not as we go along. Well, first off, I'm not on the inside. I shouldn't have been able to come up with any of what I have. Reading military code isn't something I went to school for. I'm absolutely certain anyone who knows my background and knows the work I've done regarding this book is absolutely mind blown that I knew to decipher it and found out as much as I did. Surely, they will read this - because they've kept good tabs on me throughout the years - and I can only imagine their thoughts about it.

If you don't know. Don is a title given to the master of some nefarious group of people. Don Juan is a title many of heard of. If you haven't. go look up what Don means to the black market.

Anyhow, there are lists of relationships found within this writing that come directly out of the cipher. These lists will point out the ones involved - who don't want to be seen - and what they've been doing!

OH MY!! You guys don't have a cloak to hide behind anymore and GOD is the one who made this all come to pass. How wild is that?

Not all lists will be made in the same format, and they also won't be outlining the same thing. For this cause, I've decided to accentuate the key terms by highlighting them **yellow** and making them a **bolded font**. So, the key terms will look **like THIS**. When you see a yellow highlighted and bolded set of words (like I did on page one with cipher text and here with **like THIS**) you will know that came directly from the line items the cipher has that I created from the character names in the book. There are thousands of line items. The line items give details of all those things the elite are doing to bring in the New World Order.

There is nothing funny about this assessment when you see all the storms that's destroyed villages, cities, and towns and look at the death rate, it's sad to know, they pre-planned these alongside wars, land shifts, and bioterrorism.

When I'm making lists of those key terms I will put **the list heading in bold and highlighted** with the yellow (as you see here). So, the lists will have **titles that are bolded and highlighted yellow**. That way there isn't an entire list of bolded and yellow highlighted words. Instead, the list title being bolded and highlighted **yellow** will tell you *all the bulleted items are found in the cipher* and that's why they're in the list under a bolded and highlighted yellow heading. There's a good reason for this and it saves me a lot of time explaining. I will explain as we go along.

In researching the ciphers line items. I realized there is:

- A New Global Network
- Artificial Intelligence Network
- Advanced Network
- Advanced Infrastructure
- Power Integration
- Advanced technology systems
- New Energy management
- A lot of laws changing
- Currencies being created and others being killed.

The topics that apply to this system are as follows.

Applicable Marketing/Operational logistics names/category:

- Sustainable development
- Climate Change
- Management Science
- Space Exploration
- Sustainable Development
- Intelligent Services
- Integrated Science
- Aerospace Education
- Surveillance Requirements
- Environmental Security
- Electrical Stability
- Earth Sustainability

- Engineering system/study
- Enterprise systems
- Ecological study
- Economical study
- Climate engineering
- Environmental services operations
- Next Generation Network
- Environmental surveillance
- Exercise Sciences
- Environmental security
- Preliminary environmental review
- Program for ecosystem research
- Environmental graphic design
- Expert systems
- Environmental Science
- Earth Science
- Environmental Services Operations

A short list of Big/important Names Associated that we should trust.

- Ethernet Switched Optical Network (Alamedia Networks)
- Edmonton Science Outreach Network (Edmonton, Alberta, Canada)
- European Southern Observatory
- Ministry of information technology, Pakistan
- Effluent guidelines division (US EPA)
- International Forensic Organization (India)
- British Parliament
- NATO
- United Nations
- UNESCO World Heritage
- World Economic Forum
- National institution for health
- USGS
- National Geographic
- History Channel
- Smithsonian
- Blackwell publishing
- Telecommunications regulatory authority
- Tennessee Regulatory Authority
- Public expenditure review (World Bank)

- Telecommunications service obligations (New Zealand)
- US Department of Defense
- US Department of Energy
- Department of Justice
- Office of emergency management
- Canadian Government
- European Parliament
- IBM
- Microsoft
- Apple
- USGS
- PBS

As you can see from the line items there seems to be some environmental factors, a network, surveillance, science, and something related to the climate, ecological system, and economy. That's all we can derive from those short lists. I mean, how can we go into further detail if that's all we have? There is no real way of understanding anything more than the basics with just these terms.

How could we know, there is a relationship with media outlets outside of common knowledge? Of course, **PBS** will cover anything about them going to space or trying to contact aliens. We see that now on the television. I'm not going to really talk about certain aspects that should be common knowledge. I'd like to think everyone reading this has that. I will however talk about those things that are kept hidden from us. After all, Don says his directions are a matter of **National Security** and they're classified on top of being **top secret**.

Do these line items put into the bulleted lists make you wonder? Why are they all together in a cipher I created from character names out of a book that claimed to be a **cryptic vault**?

They did me.

What new global network? What new advanced infrastructure? What will this advanced infrastructure look like? These were the questions I posed over four years ago. Heck, I even had the thought. There is absolutely no freaking way on earth that the whole world's network could be embedded into the character names (once broken down into acronyms and the meanings were retrieved); in this book.

Oh, I was surprised!

The whole system is embedded into the cipher! Right there in the character names - when they're broken down into acronyms - then get their meanings! Once you get the meaning of the acronyms (from an acronym dictionary) you have the whole world system in a puzzled format.

How is that even possible? I bet you don't believe me...

I didn't believe Don right out of the gate either. My eyes had to be fooling me. There was no way.

This stuff does not go together!

That's what I wanted to think anyhow.

Research, lots of research, is what put me on this path of believing what the Holy Spirit was showing me. (I've spent far too much time doubting things throughout my life; shamefully)

I'd already had lots of research and study over the years, that correlated with the contents of this cipher and that was a big help. With each line item, I realized there was a bigger picture forming. This was the people who hunted me out and tried to kill me. That in and of itself was large enough for me to keep plugging away at the cipher.

Could I name the people who have tried to take my life? How did these guys operate? What was the purpose? Where was the money coming from to follow and monitor me all these years?

The questions! There was so many flooding thru my mind. All of which I will take time to expound on as we go along!

In writing this, I couldn't help but think of all the people in the upper echelons of the world. Those who know what is going on and those who don't. Do any of them know exactly what they're doing, and why? If so, how can they look at themselves in the mirror daily? I can't answer that. However, some people are clearly out to do evil shit and they know exactly what they're doing. If you didn't know this.

You will by the end of this book! Unfortunately, you and your loved ones are a target now too! So don't walk away from this until you've combed all the contents, because there is a solution!

Pure evil is unfolding around you. Those perpetrating crimes are prospering. It's so backwards. People are praising the ones who are calculating ways to kill them, while shunning the very people who would put their lives on the line

to help any and every one they could. I guess that's why the gospel (upon deep study) proves we are in an Upside-down world?

It's interesting. To say the least.

Don tells us a lot of things. However, the most important aspect is in terms of what all this merges to form:

- ⚡ **New Global Network of alliances**
- ⚡ **Advanced Intelligence that merges every industry from healthcare, to banking, and surveillance**
- ⚡ **New advanced artificial intelligence global Network interconnected**
- ⚡ **A Global artificially intelligent infrastructure**
- ⚡ **World Domination with total control over everything.**

My apologies now. However, I feel strongly about this point. Whoever you are, I want you to be genuinely interested in this work because of how large it is. Someone once said something to me (about their doctor friend getting one of the medical treatments listed in this book)... because I said, "pass the book along to them. There is stuff they possibly never thought about directly related to that topic."

He said, "He would never read it. He is a doctor."

My response: "Even doctors could learn from this stuff."

And it's true. Even if my punctuation is off (I write the way I talk and I like to be thorough too.) There's also the fact that this is my testimony and I'm not ashamed of it. It's wild, to say the least. So, I include all my "crazy" comments. This writing has something that can teach any and everyone from a Ph.D. level down to the one who dropped out of school. And I'm not even joking. Heck, let's keep it real. If a highly intelligent human reads this (and that's you). The least thing you could do is give your educated opinion on how well I conveyed my testimony. Right? After all, you're so smart you at least know, no-one knows everything, which means you may learn something - as you look for the critique, I asked you to give me.

Btw, if you are a targeted individual, you absolutely will benefit from everything you find in the contents of this writing. So - you targets - **especially** - don't pass it over. And heck, humor me and send it to someone of "high caliber" and encourage them to read it too. Let them decide if this work interests them at all.

There are a couple things about these lists and the ones to follow. We should know about before going more in-depth. Most of these terms are interchangeable. You can see they're somewhat the same. However, when you search these terms different studies and important works come up that you wouldn't otherwise find without knowing the exact and specific terminology. I believe this is why they're outlined in Don's directions as if they're different. These systems of systems have a relationship with social sciences and the environment, environmental medicine, ecological studies, and technological advancements. You should've gathered that from the lists above.

There are operational logistics, electronics, environmental medicines, study points for schooling, organizations, small business applications, legislation, historical concepts, press releases, business models, and even legislative mentions for amendment or enforcing and historical events. Yet, that's not all of it. There are models, methodologies, physics models, mathematical equations, telegraphing, false news, and even inside knowledge on how they carry out these nefarious operations, where they expect to hit (when carrying them out), and an entire telegraphing system. It is a hell of a lot of information embedded into the character names of that book!

Corporations have smaller businesses with different names below them. They call them subsidiaries. Or they notate their operations under the "doing business as" terminology. The technical jargon is strategic. It truly allows the rulers of this world to get away with murder, and receive praise for it. I've also noticed it is a way to control the monetary system. But I won't go into much detail on that topic. In fact, I'd do well to study a bit more if I were to give specifics in that arena.

A screenshot from the cipher shows it is line item after line item.

There is a clear objective to Don's vast directions.

Once you put all the line items together. You can find the goal, or I should say, 'goals.' All anyone of us would have to do is put together key terms to see all the processes used to transmit data, keep it safe, who is hosting the data storing, who is making investments or where your investments should go, and engineering/research developments into the next phase of advancements.

As I said, it's compacted with lots of information! Every little question about where we are going, what will be in the news, and even locations to bomb with nuclear explosives, or directed energy (laser) weapons. It is all listed in the cryptic puzzle of the cipher. The line items are nothing more or less than a bunch of line items, that mean nothing more than their dictionary meaning, up until you place it alongside 100 other key terms.

Then there is a picture.

There is also.

Understanding specifics, to understand the whole.

1st There is so much to understand. I just can't share it all. Not in this writing. Otherwise, I wouldn't get this done anytime soon. I also think it is important to build on what I know as I learn it. I mostly want to share how I came to learn. You draw your own conclusions. If you wish to learn more. You can always follow my later work.

Do your own research on everything. As I told you. I am not a teacher. I know an awesome one that I will direct you to at the end. I am merely sharing what I have learned along the way using Don's directions. Needless-to-say, you will understand everything about this Don character. The most important part has to do with why he is an intricate part of, not just my life, but your life too!

2nd When I researched all this stuff I found a strange anomaly - that appears to be a normal scenario - of differing professional opinions. One group of people has this theory. That group has another. They never say the same thing across the board. This wouldn't be strange; if it weren't for the topics this anomaly is found in. Nor would it be strange if there weren't a few reasons around those topics to hide something. Learning about this should be interesting, because I'm going to try and explain it.

Also, if you view this as a .pdf. You can interact with it. I've put so much information in this writing. If you decide to investigate the things I've said. You will want to look at the resource section, the links in the writing, and the key terms included at the end. You won't need to put this down and go find it on your own. I had to come back and include this. They kept destroying this work so all the links aren't linked in the sentences. However, they're found at the bottom. This isn't my doing. With as much time as it took me to get this together, every time I get on the internet to fix the problem they destroy it again! So...

I appreciate each and every one of you. I pray whatever it is you're enduring, you find peace, grace, joy, and wisdom by the love and peaceable presence of the King of Glory. I also hope for this to make your interesting and informative read list, which prompts you to gift me, your share to a friend.

Oh! One last thing. Most all of what I'm going to be explaining to you - the way I will - is because of the line items itself and the fight I have had to get this stuff down on this paper. I will do a follow up video and present evidence that someone doesn't want me talking about this stuff. And they're powerful enough to hack my devices even when I'm not on the internet. How they're able to do this should be made clear by the time I'm done explaining what I've been shown through Don's directions.

Purple and Blue lights.

Are they in your city?

There's a set of purple lights that have been put up in multiple places across the United States. The newspapers are saying it's because the manufacturers had some defects. Here are a few articles to ensure you know what I'm talking about.

LINCOLN, Neb., says. "More purple streetlights are going to be replaced." They're not going to cost the city anything, because the bill is covered by the manufacturer of the LED lights. So, the people shouldn't worry about anything. They say they first detected there was a problem in March of 2020. In fact, this is when the first reports of the lights being defective first appeared around the USA. It's supposedly due to the "phosphor coating comes off or delaminates and creates the purplish color."

People are noticing these in multiple places around the United States. They've been questioning. Why are there LED lights appearing blue/purple installed? According to Bruce Owens - a Manitoba Hydro media relations officer - notes "this is a problem in Europe and all throughout the USA."

Residents are curious about purple streetlights in Billings Montana. Jon Hagstrom told KURL local news, "I have no idea" why they're turning purple, maybe it's divine intervention, but they're there and it's definitely interesting."

In Vancouver, more than 100 blue or purple streetlights have been reported to the city. In this linked article you are introduced to the downtown intersection of Davie and Richards streets, which "shows the contrast between the indigo lights and the traditional orange streetlight." (Susana Da Silva/CBC)

I could go on for the next few pages about these purple lights. There are hundreds of articles on the matter from city to city. But you get the picture, right?

It's simple. Purple lights are popping up all over the US and they say. It is a manufacturer's defect. You need not worry about them. They will be rectified as soon as possible. This is a lie from the pits of hell, and I aim to prove it.

If you aren't clear on how large in scope - the purple and blue light situation is - do a search for 'purple lights.' You will see cities all over are claiming; a manufacturer defect, and say, they will be replaced with normal lights soon. You wouldn't think anyone would be lying to you about these either.

The problem I have is. This isn't the truth. The first reason it appeared to be a lie so happens to stem from Don's directions. Don says they were installed for multiple reasons. The biggest and most important reason relates to the advanced artificial intelligence network and our bodies. This ties into a system of systems connected to AIRBUS, which so happens to be in the following markets:

- Defense
- Security
- Maritime
- Agriculture
- Forestry and Environment
- Land Administration and Mapping
- Oil, Gas, Mining, and Energy
- Aviation
- Civil Engineering and Infrastructures
- Insurance
- Finance and Banking
- Mobility and Transportation

What a large array of markets to distribute lights to. Good for the distributors. Not so good for someone wanting a simple explanation.

As you should already know from my introduction, and my expounding on the lists, each system has a plethora of attributes that make for an extensive amount of information.

Okay, so... If I were to outright tell you what I thought the blue/purple lights were for. I'd say they're using them to change the human genome, or at the very least, to control it.

Within the cipher. There is a list of line items. Giving me the vibe of, these lights have been installed for "**local linear properties**" applicable to genomic takeover, change, and control." But for anyone who has never heard of that the only logical thing to say is. What the heck does that even mean?

Then there is also the fact, me to just say this is generic, general, appears to be speculation, without a cause, and wild conjecture from a conspiratorial citizen who has absolutely no evidence that these lights play any part in that at all. Heck, most people – including myself – have no clue what local linear properties means, in the first place. So, they would have to study just to understand that, in and of itself.

The blue and purple lights relate to each and every aspect of the list(s) I've outlined above. How just varies from one industry to the next. Explaining it isn't that easy. So, I'm going to explain it in the most unconventional way possible.

Blue/purple lights are used in:

- **Civil Engineering** and Infrastructures use blue (or purple) lights for a plethora of reasons. Such as **Accident prevention**, mood lighting, completing a job task with the ability to see, to illuminate an **emergency egress system**, and they can be part of a security system. ([HERE](#)).

How they are used all depends on the need.

- In **mining**, different (blue, red, yellow) lighting would be used to illuminate certain places. ([HERE](#))
- Blue lights in **aviation** are normally used for information only. ([HERE](#))
- **DFW Airport** installed 9 million dollars' worth of blue light air system to zap germs and viruses. ([HERE](#))

As I just said, to understand why the blue and purple lights were found in streetlights we must cover a lot of information. Once we have most of it covered, we should easily be able to formulate a more accurate reasoning that makes much more sense than faulty streetlamps - that kept being installed; even after they knew they were faulty, and have yet to be replaced in many areas.

What is purple UV light used for? "Purple LEDs are ultraviolet and they can be used to create a blacklight effect." Though you can make a brighter purple by mixing red and blue on an RGB LED, it won't have the same effect as the ultraviolet lights used in counterfeit bill detectors, and for revealing security holograms on credit cards, and driver licenses, which are not seen with the naked eye.

Purple light can help you fall asleep on top of reducing emotional and mental stress. The nervous system and eyes are linked with this secondary color.

Purple light skin therapy: ends acne-causing bacteria while reducing facial inflammation and the appearance of acne-related scars. It is therefore highly recommended for people with acne and redness.

Is purple light harmful? "Too much violet light can sunburn your eyes and your skin and cause cancers." The eyes are made to withstand most UV light rays but are not equipped to withstand blue light rays.

Did you know, the amount of time people spend in front of devices at close range is what damages eye health?

"Purple LED lights aren't really purple, but rather red and blue combined. Studies show blue lights interrupt our circadian rhythm, affecting sleep by suppressing melatonin production. Meiser says, "blue lights contribute to migraines and visual fatigue, too."

"Purple light can help you fall asleep. It also reduces emotional and mental stress. The nervous system and eyes are linked with this secondary color. Contrary to red light, purple light decreases sexual desires."

Ultraviolet (UV) "light" is a type of electromagnetic radiation. UV light has a shorter wavelength than visible light. Purple and violet light have shorter wavelengths than other colors of light, and ultraviolet has even shorter waves than violet does; so ultraviolet is sort of "purpler-than-purple" light or "beyond violet" light.

"UV has a higher frequency and shorter wavelength than visible light, and it has a lower frequency and longer wavelength than X-radiation."

"What is the frequency of UV rays? Ultraviolet radiation oscillates at rates between about 800 terahertz (THz or 10¹² hertz) and 30,000 THz. When we talk about visible light, we refer to the different wavelengths of light across the visible spectrum by the names of colors."

Just as wavelength and frequency are related to light, they are also related to energy. The shorter the wavelengths and higher the frequency corresponds with greater energy. So, the longer the wavelengths and lower the frequency results in lower energy.

"Light with long wavelengths, such as light with a low color temperature and red light, had little influence on the human biological rhythms. On the other hand, green and blue light of mid-short wavelength, such as light with a high color temperature, had a greater influence." You could stare at your phone all evening and be kept from sleeping because the blue screen can prohibit melatonin production.

According to znsience author. "Purple is not the same as violet, even though people tend to treat them as interchangeable terms. Might I note? The two do look very similar. On closer inspection, purple is more 'reddish', while violet is more 'blueish'. What we perceive as violet is, quite handily, the bit of the visible spectrum right next to that of UV rays". You can look at the chart on znsience, which is a good read. To get a deeper understanding, if you are viewing this in its pdf format you can interact by right clicking the link and hitting "open in another window." To make this more interesting you could

interact and learn along the way. So, if you are on .pdf viewing [go read this webpage now](#) - it will open in a different browser - then come back. If you aren't, then be sure to go through all the references at the end and investigate everything (and I do mean everything).

What is the blue light on the streetlights?

In the Star Tribune, an article published states: "A proposal by Minneapolis Mayor Jacob Frey for \$9 million in lighting upgrades to improve public safety has prompted a community discussion. With many hoping for brighter streets but *others worrying about light pollution*." In the article, the writer details how LED lighting is bad for human health as well as other vertebrate mammals like birds, cattle, and so forth.

Blue lighting effects:

It is well-documented that blue light can have a negative impact on your melatonin levels. Exposure to green and purple light could also potentially hinder your ability to fall asleep.

On another very relevant note. Researchers have reported sleep problems have surged since the pandemic began. "Two in every three Americans are reporting sleeping issues," says the American Psychology Association. ([APA](#))

Shall I remind you that people also began working out of their home more often during this time, and this would've increased the time Americans spent in front of a computer screen? This lack of sleep people is experiencing during REM sleep stages is said to be a foreshadowing event tied to **neurodegenerative diseases** such as Parkinson and **Dementia**. ([OREGONLIVE](#))

So, then asking, "Would blue and purple lighting influence our health?" Would be a wise question. When you ask these things in a browser search, this is what I pulled up.

The family handyman says: "Light has profound effects on our health and mood. We light our homes to create feelings of warmth and use lamps to combat depression. Movies and video games even have warnings about lights and seizures. Lighting and our brains have a deep relationship." The linked article goes on to tell us how purple lights really are not purple, they are blue. The article tells us about the Christmas lights causing people problems because (as I just said) some lighting can even affect our sleep patterns.

Because [some lighting can affect our sleep patterns](#), and there is a rise in sleep problems throughout the US, how come news casters aren't reporting if the streetlights are a contributing factor? Do you attribute that to it being proof these two are not related? If it were (and it is) do you think demographics would show where these people are at in the USA struggling for sleep? I know they can. In fact, this is exactly what corporate America would consider a fundamental aspect to their medically terroristic framework that's intricately planned out and intrinsically installed in the area's expected to remain after the BIG EVENT.

We will get to that after a bit.

First, did you notice it is stated, purple lights are blue? Well, if you get into reading all the linked articles you will see, one says that purple light doesn't affect our sleeping patterns, while the other says blue lights do. If [blue light causes issues sleeping](#), why doesn't purple? Theoretically speaking, it's because it's different wavelengths. To find the scientific evidence to get an answer to this question and other very relative ones, would take time and lots of study. There would be a substantial amount of evidence (data) compiled if we were going to answer in a way that does not contradict science. But shouldn't this data already exist for us? Shouldn't I be able to research these topics and not have differing opinions from different scientists? Why would scientists have any differing opinions when it comes to how light affects the human body?

Let's look at a bunch of different line items that are related to blue lights from the cipher.

1. [conventional electromagnetic](#) "A simple electromagnet consisting of a coil of wire wrapped around an iron core. A core of ferromagnetic material like iron serves to increase the magnetic field created. The strength of magnetic field generated is proportional to the amount of current through the winding." Using - [Iron – which so happens to be a climate change topic](#) because of the Co2 emissions. [Electromagnets are used primarily to move things](#) and store information.
- [Electromagnetic wave systems – Onde Electro-Magnétique](#) (French for Electromagnetic Wave) According to Britannica, "the entire electromagnetic spectrum, from the lowest to the highest frequency (longest to shortest wavelength), includes all radiowaves, (e.g., commercial radio and television, microwaves, radar), infrared radiation, visible light, ultraviolet radiation, X-

rays, and gamma rays. Nearly all frequencies and wavelengths can/is being used for spectroscopy. (Electro. Wave, Brit.) Electromagnetic wave systems are advanced. There are a great deal of science/medical journals regarding [DNA waves and their applications in biology](#), which is in an area called genomics. DNA is formed by the joining of quantum particles, like electrons and charged atoms. (NIH, DNA Waves)

- [Researchers developed "radio-genetics."](#) which is: a division of radiobiology dealing with genetic systems. This system uses a low frequency signal or magnetic field, to activate ferritin particles. This is much more advanced than the normal signal produced after tuning into a specific wavelength (or frequency), where the radio receives the electromagnetic wave and converts it into mechanical vibrations in the speaker.
- [Extremely low-frequency \(ELF\) electromagnetic fields cause DNA strand breaks in normal cells.](#) An analysis of 100 Hz and 5.6 mT **electromagnetic fields**, "continuously and discontinuously, on the DNA integrity of Vero Cells assessed by alkaline **Comet assay** and by cell cycle analysis." 45 mins of electromagnetic fields - in the cited range on the Vero cells - shows damage. (Pubmed, ELF., 2014) Wouldn't extremely low frequency come out of mobile phones?
- **Vector wave** – In [physics](#), is a **wave vector** (or **wavevector**), it's a [vector](#) used in describing a [wave](#), it has a magnitude and a direction. It is always perpendicular to wavefronts. A closely related vector is the **angular wave vector**, It is common in several fields of physics to refer to the angular wave vector simply as the wave vector, in contrast to, for example, **crystallography**. It's not just useful there though. "Within the past 5 years, the gene therapy field has seen a wave of drugs based on **viral vectors** that have gained regulatory approval that come in a variety of designs and purposes." ([Feb. 2021, Nature](#)).
- **Gene therapy** occurs at the viral **vector** platform.
- [Thermo-Fischer Scientific](#) "provides high-quality lentiviral vectors for **gene therapy**."
- **Scaler wave** – Are two of three possible wave types (**electric scaler wave**, **electromagnetic wave**, and the magnetic SW). Scalar waves are a type of electromagnetic wave that are parallel to the direction of propagation, unlike the **perpendicular transverse** waves of electromagnetism. They are also

called **longitudinal waves** and can be created by a pair of identical waves that are out of phase with each other. Scalar waves are claimed to have special features, such as lossless transmission of energy and information, faster than light speed, and ability to pass through solid metal objects. ([here](#), [here](#), [here](#)) They're also known to lengthen the life of plants. **Scalar waves are used to help people not feel "fuzzy, tired, and sleepless" using fa Quwave EMF pollution protection.** [DNA and Cell Resonance: magnetic waves enabled](#) – "Scalar energy strengthens chemical bonds within DNA, making it more resistant to damage, and triggering an improvement in our overall immune function." ([here](#))

- **Scalar waves** are related to [CELLULAR COMMUNICATION, SIGNALING, AND CONTROL FROM THE DIFFERENT PERSPECTIVES OF BIOLOGY, CHEMISTRY, AND FIELD PHYSICS.](#)

[A few related publications.](#)

- [Cellular communication by magnetic scalar waves --- Electromagnetic shielding devices](#)
- [Different devices exist to help with orgone energy replenishment.](#)

Blue and purple light is a part of the electromagnetic system. [Electromagnetic](#) energy travels as waves that vary in wavelength. ([Thought CO, 2019](#)) Extremely low frequency (ELF) electric and magnetic fields (EMF) occupy the lower part of the electromagnetic spectrum in the frequency range 0–100 kHz. ELF/EMF is what they call the result of **electrically charged particles**. Measurements of ELF EMF are performed in order to characterise emissions from sources and exposure of persons or experimental subjects. The strength of the electric field is measured in units of volts per metre (V/m). The strength of the magnetic field is measured in units of amperes per metre (A/m) but is usually expressed in terms of the magnetic flux density measured in units of tesla (T) or microtesla (μT). Another unit which is commonly used to measure the magnetic field is the gauss (G) or milligauss (mG), where 1 G is equivalent to 10^{-4} T (or 1 mG = $0.1 \mu\text{T}$). ELF EMF is produced by both natural and artificial sources. Naturally occurring ELF EMF is associated with atmospheric processes such as ionospheric currents, thunderstorms and lightning. Artificial sources are the dominant sources of ELF EMF and are usually associated with the generation, distribution and use of electricity at the frequency

of 50 or 60 Hz. Powerlines, electrical wiring and common appliances (electric blankets, televisions, hair-dryers, computers, etc.) all produce ELF EMF. The widespread use of electricity means that people are exposed to ELF electric and magnetic fields in the home, in the environment and in the workplace. Residential exposure to ELF fields depends on many factors, including the distance from local powerlines, the number and type of electrical appliances in use in the home, and the configuration and position of household electrical wiring. Background magnetic fields in the home are usually around 0.1 μ T. Background electric fields in the home can be up to 20 V/m.” (NIH Cancer) This tells us that the blue lights are traveling along a certain wavelength that can be measured using the RF frequency measurements.

SPEEC is Sonic propagation of electromagnetic energy components. The SPEEC hypothesis states “all sounds have an electromagnetic component and that *all electromagnetism is created as a consequence of sound.*” This means, there is a special relationship between sound and light. (Journals)

In the list above - about the different waves – we can see various topics applicable to the electromagnetic system. It seems to be clear. The different wavelengths are applied to different systems. It all depends on the wavelength. The different wavelengths can be used to make people feel better, strengthen chemical bonds in DNA, be used in cellular communication, physics, genomics, and to create a wide range of materials. It’s easy to look at this list and formulate an idea of what the electromagnetic system can be used for. When I was reading those terms, and looking at the associated information set I felt I had a 360 view of how the electromagnetic spectrum is being used.

There’s no doubt about it. There are a wide range of applications. Through reading article titles (on the key terms above) we are allotted a great deal of information. The information sets allowed me to mentally envision all the various applications related to electromagnetics while educating me in a profitable and applicable way as I searched to obtain a well-rounded and facts-based understanding of the significance of this topic, for the purpose of understanding Don’s directions.

Blue is merely a part of the electromagnetic color spectrum and there are technicalities to understanding that didn’t really excite my interests. In my journey, I realized there is so much more to learn than the basics. Some of that knowledge was useless if all I trying to accomplish is understanding what this guy Don was saying in his mysterious directions. However, the basics were

extremely important. We have covered those basics. Light and sound is a part of the electromagnetic spectrum. Sound is what creates it.

Let's pose a scenario.

If there is a blue light in a hallway at work, you aren't thinking about it effectively interrupting your sleep patterns. If it did. You would chalk it up to different irrelevant issues and possibly take a sleeping pill to mitigate it. You wouldn't be thinking, the light in the hallway at work is making me have trouble sleeping. Well... what if it was the blue light in the hallway at work? How would you ever find that out? Are the doctors and other professionals telling you about the effects of blue/purple lighting? If so, you're a lucky person. I've been to a boatload of doctors in the last few decades, and they've never clued me into the ways lights could affect my health. I believe this is far more important than not. We will learn why I say this later.

You can tell from the earlier notation of the blue/purple lights there are contradictions that exist within the simple search of the effects of light on the human body. I'm not making any of that up. The evidence is right in front of our faces. With the well-rounded view of the many applicable applications using the electromagnetic spectrum (from reading the key terms) we can easily surmise there should be no scientific findings that say blue lights don't harm you, and then, well... They can cause some issues. Why is one saying, they don't harm you and another saying otherwise?

Let me use this same topic to point it out again.

1. There are a variety of studies to look at when it comes to the blue lights. Ophthalmologists claim we don't have any reason to worry about the blue screens our devices put out when it comes to ocular damage, however, it can affect sleep. They claim you'd get more damage from the sun outside than you'd get from the devices. ([HERE](#)) While others claim blue lights kill all sorts of bacteria and germs. The light therapy industry is booming as medical sectors, airports, taxi-cab companies, and public transportation markets adapt their usage to control the spread of bacteria and germs, to mitigate a rise in deaths and the spread of a disease. ([HERE](#)) At the same time **photodynamic therapy** is a big deal.
2. "Blue light therapy becomes photodynamic therapy when it uses a combination of photosynthesizing (or light-sensitive) drugs and a high-intensity light source to activate them. The light used is a natural violet or blue light, and it's considered to be an alternative treatment." ([HERE](#)) The helpful bacteria is documented as being located

on the skin or in your gut or digestive system. They're called resident flora, or your microbiome, which are groups of microbes living in and on your body. Gut bacteria keep us healthy by absorbing nutrients breaking down food and preventing the growth of harmful bacteria. (Cleveland)

Blue lights can kill all kinds of bacteria and germs, and humans have good bacteria that the body needs to fight off infections? I have seen videos of people recording buses that have the blue light. When passengers get picked up. Are these blue lights killing the healthy microbiome passengers need?

If not, how is it not?

They say it doesn't, and that makes no sense to me. It can work on a bus, in an airport, on a plane, but it doesn't work when you cross it? It doesn't work when we are using our devices or sitting in front of a television? But it can affect melatonin levels and have a greater influence on the body within these studies produced on it?

Make that make sense!

How would the blue/purple street lights not be? This is the only thing you can count on researching any of what we find in here. There will be endless amounts of contradictions. I mentioned this earlier. From my findings and Don's directions, this narrative seems to be a business model the elite have employed to keep people from coming to the knowledge of the FULL truth.

Let's cover some random key terms:

- **Non-ionizing radiation:** [is a form of energy that travels through space and matter. It is produced by a wide variety of products found in the workplace and in our homes.](#) Lasers, power lines, tanning beds, household appliances, cell phones and radio's. The most common non-ionizing radiation is said to be radio frequencies and ELF's. (Utah.gov) It is a type of radiation in the electromagnetic spectrum that does not have enough energy to remove an electron from an atom and turn it into an ion."
- **Interventional radiology procedure:** Interventional radiologists diagnose and treat disease. They treat a wide range of conditions in the body by inserting various small tools, such as catheters or wires from outside the body. X-ray and imaging techniques such as CT and ultrasounds.
 - Humans generate these electromagnetic fields. Like, with x-rays. Once an x-ray machine is turned on and in use, electricity comes out of every power socket and that is categorized as low frequency electromagnetic

fields. I've been seeing a lot of pink in the sky. They tell me and you. Don't worry, they're just solar flares, and we just blindly believe them.

These are terms NASA would deal with

Electromagnetics) NASA: Virtually every endeavor that NASA undertakes requires communications or data transfer via the electromagnetic spectrum. NASA is known to rely solely on **Space Communications and Navigation (SCaN)** to provide this vital service to all missions. The different systems NASA has to map the depth of snowfall, see if a sinkhole is going to open up, and map lava changes is pretty interesting and far more advanced than you would imagine without the movies giving you clues. You could get lost in them (seeing as there is more than one system) for hours, days, or maybe even weeks on end.

- **NASA | Radio frequency RF telecommunications systems:** You may recall NASA claimed to go to the moon. They now run the **DSN which is deep space network**. NASA has an international array of giant **radio antennas** touted as supporting **interplanetary spacecraft** missions. They say. There are spacecrafts orbiting earth. The Deep space network provides radio astronomy observation and radar "to help improve our understanding of the Universe." It's run by JPL (who also man's interplanetary robotic space missions). There are three facilities that are spaced at equal distances from one another near **Madrid, Spain, Canberra, Australia, and Barstow, California**. It is said that these locations were strategically placed 120 degrees apart so the sites can allow for constant communication with spacecraft as the planet rotates. The frequencies NASA uses is the same as the one used to beam TV signals from the moon, which happened July 20, 1969. They're called **S band, X band, and Ka band**. The NASA website currently states: "The intent of this subtopic is to seek innovations in RF **telecommunications** systems in support of the Exploration Systems Enterprise plan for manned and unmanned exploration beyond **Earth orbit**, resulting in a permanent human presence throughout the Solar System. NASA says they "envision a future including manned and robotic missions to the Moon, Mars, the asteroid belt, and beyond."

I find it interesting that NASA "envision a future including manned and robotic missions to the Moon and Mars" because NASA is speaking as if this is later in life, not now. Oddly, they claim they are currently using robots to scout Mars. Now, not later.

Why speak that way? Aren't these guys smart enough to know that the future is now? Could they not articulate this on the website? Or are they lying, and the lies are so grandiose they can't seem to keep up with them? I get it. This agency brings in billions of dollars from the federal government to support operations there's no way they could be lying. Oh, friends. Please, stick with me till the end.

Now, really think about this. If NASA were created to help hide science or something more nefarious, how would you or I know? I've been down every rabbit hole and the one that I found to be the hardest to believe was space. Space couldn't be a lie. Yet, to my surprise. Don showed me something that's irrefutable. If NASA fed humanity a bunch of lies about space - that could keep a bunch of people entertained (like circus clowns) - how would they be able to keep that lie up? Wouldn't we - the people - figure it out? Ya know, it has become widely known that Buzz Aldrin has told people they never went to the moon. There are recordings of him telling this to a little girl when she asked. Why have you guys not been back to the moon? Then there are all kinds of skits with him saying that he hasn't been there, to make a laugh. I think they've had him do the skits so as to cover-up his mistake of telling the truth to the little girl while her parents were filming it. They're making a mockery of the truth and most people chalk it up to 'entertainment.' There are skits, movies, and cartoons depicting the same scenario. Is this really because they wanted to make people laugh or is there something else happening? Let's allow the evidence to speak for itself. I don't like speculation.

[The Ka band \(pronounced as either "kay-ay band" or "ka band"\)](#) is a portion of the microwave part of the electromagnetic spectrum defined as frequencies in the range 26.5–40 gigahertz (GHz), i.e. wavelengths from slightly over one centimeter down to 7.5 millimeters. X band and S band is also a part of the electromagnetic spectrum with different wavelengths.

These bands of frequency are now being used to send signals from aerial craft to submarines.

- **Mass, matter**, energy, Rf frequency, etc. are all measured in different units. For an example: Every country has its own measuring system. Different ways of making measurements lead to different units. Foot, pound and second are used in India. Mass ranges from 10 to negative 30th power for electrons and 10 to the fifty-third power for universe. To measure the same area of space, time, or matter. You would need a different unit to measure each part individually. A reason is because, bodies differ in order of magnitude significantly. (BYJUS)
- Each one of these applications have there own special unit of measurement. There are only some that have the same unit.

Thrust and pressure

Thrust and weight

Force and pressure
Weight and pressure

If you really believed me - when I just told you - all these have the same unit. You are in danger! Only one of these have the same physical quantities thereby they have the same unit.

Thrust and weight.

Thrust is the **force** which moves an aircraft through the air. Pressure is the force per unit area. Weight is the gravitational attraction force. Thus, thrust and weight both represent, the force. So, they have the same unit.

Look, I did this to make a point. Don't just trust people cause others do or because they have always seemed to be telling the truth. Don't believe something just because the world does. That's called going along to get along. If you are living like that. You aren't truly living at all. Research everything you're told, and I mean, everything!

- A little leaven will leaven the whole lump!! (Galatians 5:9)

Okay, okay, I will stay serious here... Although, you do get to see small things like thrust and force are also embedded into the cipher.

What if I told you all of this has to do with the light housed within our bodies?

Common forms of energy include solid mass or as non-solid matter, such as heat, light, electrical, sound, gravitational, potential (stored energy) and kinetic (energy of motion). Quantum physics states that mass and energy are interchangeable, and consequently that mass is merely a manifestation of energy. This means that everything, including humans, is simply energy stored in mass particle form."

Everything is matter.

You are matter.

Yes, you matter...

Light emits energy or energy emits light. You are energy. Your energy emits light, and is affected by light. It would not be wrong to say light affects humans since we are "simply energy stored in mass particle form. We can then say, light and energy go hand-in-hand and are one in one.

Light Quantum - which is essentially a photon that comes from Ancient Greek (φῶς, φωτός (phôs, phôtós) 'light') - is an elementary particle quantum of the **electromagnetic field**, including electromagnetic radiation (such as light and radio waves), and the force carrier for the electromagnetic force - it can drive the body's processes and produce different effects at different frequencies.

All matter is composed of atoms. Atoms themselves are composed of smaller parts called *subatomic particles*. ([WIKI](#)) Atoms are neither created or destroyed by man. They retain all the chemical properties of an element. The word *atom* comes from a Greek word that means "indivisible or uncuttable." If you didn't know. Atoms bond to each other to form elements. Those elemental compounds form people (or objects).

According to certain schools of thought. The cosmos is formed by a collision of atoms that gather into a "whirl", and the drum-shaped earth is located in the center of man's cosmos. ([here](#)) BTW, a drum shaped earth would depict a closed system of a flat stationary plain that's encapsulated by a firmament below (water) and one above (water). Anyhow, the modern atomic theory says, "atoms of one element are the same, while atoms of different elements are different." Atoms are basically the smallest part of our universe. They're constantly in motion, and through their collisions, and regroupings from various compounds, they can be changed. This is also **quantum theory**. They intertwine.

Atoms and molecules follow the rules of chemistry and physics. They can be manipulated using quantum physics. This is also a multi-layered field.

Don calls the stuff I'm explaining, **connection-oriented data**.

An atom is the smallest unit of matter that retains all of the chemical properties of an element. This means; at the smallest level our atomic structure has all of our **chemical properties**. Mind you, atoms are neither created or destroyed during a chemical change, rather they are rearranged to produce substances that are different from those present before the change. ([Libretxts](#)) So, if my atomic structure is rearranged. I would be, look, or feel different. My atomic structure could/would rearrange by specific foods that give a chemical base that I didn't have before. We see this happening daily with people getting cancer from certain foods or talcum powder. These elements were put into the food - or powder - and that chemical base caused cancer to develop from within the cells. This is because there was a chemical change. But the atoms needed to be excited. An electrical pulse could do that. Electrons inside of the atoms are easily excited by striking photons or electrons, and electrical fields. This can be done using magnetics in a closed

system. Mind you, they've been using remedies to change and rearrange chemical bases for hundreds of years. That's what mushrooms, herbs, and all that stuff does for the body, which is why inflammation can be taken care of using things like turmeric.

Related key terms:

- "**Atomic manipulation** has been around since the 90s and is the process of moving single atoms on a substrate **using Scanning Tunneling Microscope (STM)**. Atomic manipulation is a surface science technique usually **used to create artificial objects** on the substrate made from atoms and to study the electronic behavior of matter. The microscope is controlled by **dedicated electronics and a computer.** ([Journal](#))
- "**Atomic spectra** has been around since the 60s and is the study of atoms (and atomic ions) through their interaction with electromagnetic radiation. When light travels from one medium to another, it either bends towards the normal or away from the normal this is called refraction of light. The phenomenon of **refraction** is mainly attributed to the difference in the speed of light in various mediums. The speed of light depends upon the nature of the medium through which it passes." ([here](#))

History says, philosophers came up with a materialistic philosophy back in the fifth century. (BRIT) This is what they say.

"The entire universe was composed exclusively of atoms and void, which meant that even the gods were subject to natural laws."

This supposedly came about when philosophers and theologians wanted a theory to explain the Universe that encompassed everything from humans to material goods. Science only makes up one aspect of this broad philosophical system that appears to be "homo" (meaning same). ([learn more here](#)). Philosophical men, went as far as keeping certain terms "to honor the ancients." ([here](#)) This is why most of these words have a Greek etymology. Do you think these highly esteemed professionals were just going to up and quit honoring the ancients (aka gods)?

Philosophers and theologians are also embedded into the ciphers contents.

Do you honestly think our ancestors would be honoring the ancients by not passing knowledge down so that work in that arena could be finished? Anyhow, atomic physics is vital to these systems. Playing a major role in many of the important applications. Over the last few decades atomic physics has "proved to be a spectacularly successful application of quantum mechanics, which is one of the **cornerstones of modern physics**," which is the study of the structure of the atom, its energy state, and its interactions with other particles and with electric and magnetic fields. This is essentially the same thing NASA studies to keep the ISS people in top condition.

Did you catch the wording? "One of the cornerstones."

What is a cornerstone?

1. An important quality or feature in which a particular thing depends or is based.
2. A stone that forms the base of a corner of a building, joining two walls.
3. A cornerstone is the stone ----- >that forms the base of the corner of a building. So, atomic physics has been around longer than the narrative claims. We know this because they were looking at matter and mass as far back as the fifth century.

So based on the foundational meaning of the wording related to atomic physics we can see an unbreakable relationship with atomic manipulation, quantum computing, worm holes, time machines, etc., which allows us to see the connections with important topics today using theology or philosophical ideas. "[Electromagnetism](#)," is a part of physics in that there is an interaction that occurs between [particles](#) that are [electrically charged](#) via [electromagnetic fields](#). In other words, electromagnetic force is responsible for many [chemical](#) and physical phenomena observed in everyday life.

The field of quantum physics came about in the late 1800s earlier 1900s. The word quantum has latin roots, and it means "how much." To apply this in a visionary statement we can say. How much photonic energy is needed to affect one particle in the centers of a man's Universe? This can also be said, quantum (x) photon is needed to affect one particle in the center of a man's universe. It's a mathematical equation, however, it's also a statement. You can write a mathematical equation out in the form of a statement. If I wrote a statement out in the form of an algebraic equation is that different than the statement? No! Not at all. If I elaborate on the equation by explaining the x or

the γ in the equation, am I talking about something different? No!! I'm giving further details on the equation. I'm not deviating from it.

Quantum physics is said to have been developed around the same time photons were said to be discovered, and philosophers were coming out with their theories on matter. (TELEGRAM SCIENCE Exchange) Should we pretend as if these aren't related?

Popular reports say that atomic physics didn't come out until the 1920s. How is that possible? **Quantum mechanics** is a fundamental theory in physics that describes the behavior of nature at the scale of atoms and subatomic particles. ([Wiki, quantum](#)) You can't have a theory of something without that something being present! Historical accounts say the recognition of quantum physics came about in the earlier 18-1900s. That's a hundred year difference. If atomic physics didn't come around till the early 1900s, which is when they began developing this system within our system, how the heck was quantum mechanics around? The problem here is atomic physics would've needed to be conceptualized prior to quantum physics. When I started looking at the different reports, I knew there was something 'off.'

And it's not in just this aspect. It's in every part that you can imagine. I highly doubt the powers that be would let me produce the evidence on a timeline charted. They'd screw that up every time. I know. I've tried sharing certain things and to no avail.

Are you even aware of the fact that our bodies emit light? You should, the medical journals entered talk about it, and it seems to be the main driver as to why all of this stuff exists. There is a man that studied photobiology, which is known to be the study of light on cells. It's a **bio-chemical process**. These studies are known as Popp's studies and they seem to be hidden from most of the medical journals. I had a hard time finding it.

['Popp's studies' told the world, "WE KNOW TODAY THAT MAN, ESSENTIALLY, IS A BEING OF LIGHT"](#)

This statement, in the study of biophotons - by Fritz and his partner Naghl - is extremely satisfying. It adds validity to the written Word of God and my knowledge of it. After all, it is written in

- [Psalm 82:5](#) They know not, neither will they understand; they walk on in darkness: all the foundations of the earth are out of course. 6 I have said, **Ye are gods**; and all of you are children of the most High. 7 But ye shall die like men and fall like one of the princes.

- [John 10:34](#) Jesus answered them, Is it not written in your law, I said, **Ye are gods?**

So, these findings really do back-up and or support what is written about who we are, which makes the Doc's statement (and other medical journals about humanity being "light beings") that much more interesting and believable!

As mentioned, [Popp's studies](#) are relevant to [photobiology](#), which is the study of light on cells. It's a bio-chemical process. And with just about pretty much everything else. There is a mathematical equation that could demonstrate what this means. Or what it will look like.

The photobiology phenomena recorded by Popp's studies is not hypothetical. Nor is it something new to the people. This means that those lights on the streets are affecting the human bodies that cross them, and no matter how you look at it, it is a huge part of [particle physics](#) and [atomic manipulation](#).

Living or not living cells can be affected by the light spectrum. We know this from simple facts - like plastic leeching into water in a bottle when left out in the light. Or the body producing vitamins when in the sun. These are essentially the same. In that they are of a similar kind. They're related to physics, which stems from energy fields around us. Light is the force carrier for the electromagnetic field. What type of light force do you emanate? Or are you in darkness? Because that statement alone says we power the world. Our light in us drives much of what we see around us. I believe enough evidence exists to prove that we are the center of the Universe and they built the entire system to make you unaware to your position and theirs. All to take every human they can to the pits of hell with them - seeing as we are merely angels having a human host body experience.

There is an old saying that goes. "[Theology as Queen and Phsychology as handmaid](#)," which resulted in a lot of research papers, journals, and articles to explain the connection between theology and philosophy. In reading some of those works I'd come to realize theology was created (or existed) to explain away biblical concepts. This piece of knowledge told me biblical teachings are a primal factor in the direction of theosophical views, which speaks volumes to me. After all, "honoring the Ancients" was/is a primal factor in the direction of the world. I believe they created all types of narratives to keep the world from knowing their roots, the power of the light they house and how they can re-connect to their Creator to empower them and give them authority in this life. So, in order to do so. They needed

to change history little by little and erase some earlier findings all while making the ancient history appear as if it was a mystery.

Dr. Fritz - in the 80s - is quoted as saying:

We are still on the threshold of fully understanding the complex relationship between light and life, but we can now say emphatically, that the function of our entire metabolism is dependent on light." Dr. Fritz Albert Popp

He goes on to say, "Increasingly science agrees with the poetry of direct human experience: *we are more than the atoms and molecules that make up our bodies, but beings of light as well.*"

They knew we are light beings having a human host body experience back in the 80s according to this statement. However, I strongly believe that is when they were coming out with their findings only to set the stage for their final global push.

His work didn't just confirm the existence of biophotons (which are particles of light, with no mass, that **transmit info** within and between cells). His work also "shows that DNA in a living cell stores and releases photons creating **"biophotonic emissions"** that may hold the key to illness and health." He said, "the function of our entire metabolism is dependent on light" because they studied this on humans before. ([Biotology Arizona](#))

This research was conducted in 1983. Just 20 years after **NASA** began messing with the electromagnetic fields. If they didn't have human subjects to try this stuff out on, how in the heck did they know in the 80s our bodies were dependent on light? Then, according to the narrative they managed to lose that understanding, to get to the point where they needed to study it again so that they could advance technology to create super soldiers?

There is a lot in the cipher that pertains to this biophotonic study that we are going to need to cover – just to get a good understanding of what they know and why they're doing what they're doing.

My friends, these aren't rat studies. I don't care what anyone says. ([Biotology Arizona](#)) Look at the history. Most people were illegal and **unethical experiments**. This is why the U.S. EPA's new protections for subjects in human research rule exists. This came into force in April of 2006, and it was created

because there was a need to “tighten ethical guidelines controlling nonmedical human experimentation.” (NIH, PMID 16759973)

Just two weeks after that rule was created a group of labor and environmental interest groups filed suit against the EPA to challenge the rule’s ethics and legalities. Was this rule put in place to sell the people out to big businesses? They thought so. (NIH, PMID 16759973)

The **(AMA) American Medical Association** was created by Nathan Davis as he was calling for a national medical convention after the New York Medical association in 1845 first proposed it was needed. What was going on at the time that called for it?

A book by Samuel White 1777-1845 talks about the physical well being of a human and how it’s all about “matter” a matter of the mind. Samuel give details of how irritation is “specifically acting on the brain, and nervous system, and sympathically on the vascular, may define the phenomena of insanity.” (NIH, Samuel White)

How did Samuel know to talk about atomic structures and the different aspects of the matter that makes up our cardiovascular system, our mental states, and our physical well being if they hadn’t of identified the atomic structures that make up our bodies? He describes the circulatory system in detail and inflammation that may be caused within as well. How would he have known any of this if there weren’t any good microscopes to do that back in the late 1700s early 1800s?

The **National Library of Medicine** has a publication titled *Mapping and Sequencing the Human Genome* that specifically says,

*“for the first time we can envision obtaining easy access to the complete sequence of the 3 billion **nucleotides** in human DNA and deciphering much of the information contained therein. Converging development in recombinant **DNA technology** and genetics make obtaining a complete ordered DNA clone collection indexed to the human genetic linkage map and realistic for an immediate goal. Even determination of the complete nucleotide sequence is obtainable, although ambitious. The DNA in the human genome is remarkably stable, as it must be to provide a reliable blueprint for building a new*

organism. For this reason, obtaining complete genetic linkage and physical maps and deciphering the sequence will provide a permanent base of knowledge concerning all human beings – a base whose utility for all activities of biology and medicine will increase with future analysis, research, and experimentation.”
(NCBI)

(I should also point out. There are a lot of misspellings on the copied and pasted quotes from the alphabet agencies websites. Those are NOT my doing. They are found that way on the linked sites. Go look at it yourself. I do have an idea as to why. But that’s another topic that doesn’t need to be explained here. So I did want to clarify that I do see the misspellings and did not correct, for the sake of pointing it out. Look for future work. I hope to put my theory as to why according to what Don says.)

CERN Feb 27, 2014, Principal Investigator publishes landmark paper on gene sequencing. The CERN foundation and **St. Jude’s for children research hospital in Memphis** identified the most common genetic alteration ever reported in the **brain tumor ependymoma**.

This now places CERN in the field of genomics.

[The NIH webpage gives us a bit of insight on DNA.](#)

[Genome.gov](#). The website says, "Genome is a fancy word for all your DNA". So we know genome is DNA.

"DNA was first discovered in 1869 by Johann **Friedrich Miescher**, a Swiss biochemist working in **Germany**. The first extracts Miescher made from human white blood cells taken from easily accessible bandages with pus gave him the ability to isolate a material rich in **phosphorus**. He called the phosphorus from the cells **nuclein**. This Nuclein was also found in other types of cells from different species, like **salmon sperm**. Miescher's **chemical tests** showed that DNA is acidic and suggested individual molecules are very large. It was not until the 1930s - when **biophysical techniques** were applied to DNA - that his work was appreciated. He now has a research institute named after him in **Basel, Switzerland**. ([NIH website](#))

My point here is to ask you. Are you positive they used salmon and old gauze pads of patients to extract his specimens? I must point it out. Why are all these key terms in the cipher alongside all these agencies? Why do we the people blindly trust people that have a title after their name?

DNA, [is essentially code](#). Scientists have been mapping chemical sequences for DNA and found the chemical letters that make up the DNA's template has a hidden code that every human has. The DNA has 23 pairs chromosomes from one parent – 46 from two – the x and y chromosome.

The order and combination of the code provides instructions for creating organic material. For instance, your specific code will tell you the color of your hair, eyes, and health status. Segments of DNA convert [amino acids](#) into [proteins](#). Proteins do all sorts of things, *including create new cells*.

DNA is composed of 4 elements hydrogen, nitrogen, oxygen, carbon, when put together these form Y-H-W-G. (Carbon is what makes us physical and earthly beings. When [carbon](#) is replaced with [nitrogen](#), we have all colorless, odorless, and invisible gases! H*) They form the letters Y-H-W-H which is the name of Elohim. To do this you simply apply the discovery that converts elements to letters. Just so you know. These letters are based on their matching values of [atomic mass](#). This find supplies proof that God exists and there is something unique about each one of us that is found embedded into our DNA code. You have YHWH written in every DNA cell in your body and that's in addition to the specific special code you were given at birth. How freaking amazing and cool is that?

Scientists can analyze your DNA to find out everything about you. They can determine [what meals are good or bad for you](#) and they can determine your ancestral roots. They've been doing this a long time. It's also clear to me that they can create viruses to attack specific [blood lines](#), which is why blood groups like ['colton'](#) are written in the cipher alongside the [12 tribes of Israel](#). Yes, this is all in the cipher.

Key terms related:

[Medicinlineplus.com](#) states: "DNA, or [deoxyribonucleic acid](#), is the hereditary material in humans and almost all other organisms. Nearly every cell in a person's body has the same DNA. Most DNA is located in the cell nucleus (where it is called [nuclear DNA](#)), but a small amount of DNA can also be found in the mitochondria (where it is called [mitochondrial DNA](#) or mtDNA)."

- **Vanadis** allows any laboratory, hospital, or OB group to analyze cfDNA in-house (VANDIS)

I know we can agree – just from acknowledging what we've read - there are advanced systems put in place that have to do with lighting, which is also called a **photon**. So then, all this stuff exists around it, how do they not have a cut and dry understanding of it? Are you going to tell me they didn't know about Popp's studies? Do you really believe they currently don't know the exact influence color spectrums have on the human body and they are merely trying to study it? Keep reading, cause that's exactly what they're telling the people.

With the way the world is, most of the time, people don't have time to study each topic on their own. So, they tend to trust those in power to tell the truth. I've done it. It's what we were taught to do. When we (the common people) go to study stuff there are conflicting statements. A lot of jargon seems too technical to understand and it's time consuming.

Light sources produce light by converting energy into electromagnetic waves. Light sources used in practical applications emit waves with a broad spectrum of frequencies or wavelengths. Light consists of those waves that the human eye normally perceives. A normal eye interprets the wavelengths as colors, the shortest wavelengths being recognized as blue, the longest wavelengths as red, and intermediate wavelengths as green, yellow, and orange. The eye also recognizes differences in intensity of light, or levels of illumination. This means when you are driving down the road and you see, white, yellow, purple, blue lights there are different light sources affecting your mood and your health, and the reason you are seeing the different colors is because you are interpreting long or short wavelengths of electromagnetic waves into colors. ((CIVIL))

Did you know there are Ancient Origins of color?

In fact, color was used in ancient Egypt, China, and Greece to evoke emotions, aid in spiritual practices, and treat a variety of conditions. Johann Wolfgang von Goethe published the theory of colors in 1810. Most people believe this is when the 'work' on or in colors began. I feel like that's where we make our mistakes when it comes to understanding. Johann knew then, how much it affected people's emotions, but ancient civilizations knew about it too. This just tells me; it was hidden until the right moments called for them to bring it into the limelight. At this point, they're using the color spectrums at the molecular level to do all sorts of chemical alterations on people, plants, and other materials. Am I supposed to believe in 1810 is when the work on colors

began to be explored? Are you going to tell me the ancients didn't pass this knowledge down and we have merely grown in understanding it? Wouldn't it be more plausible to say, Johann just helped to bring the work on colors into mainstream society? I don't/won't believe what they say anymore in any of their publications. After covering all there is to know about it. You may not believe what they say is true either.

Let's be reminded that these are the industries in direct relationship with the electromagnetic spectrum.

They are as follows:

- ✦ Science and Technology
- ✦ Space Technology
- ✦ Scientific Techniques
- ✦ UFO's
- ✦ Specific Targeted Research Projects
- ✦ Medical Sector/radiology, ontology, etc.

Like I mentioned earlier, these branches of disciplines can be broken down into smaller branches. For instance, the medical sector would be using technology based on electromagnetic principles. Then you would also see them using instruments to determine a person's genetic make-up. These systems they're using in space technology are also being used in the medical field.

I'm assuming that's why there are fields labeled '**interdisciplinary**' within these directions. Then you find companies, Institutes, or organizations associated with the big names operating on research/development, engineering, and implementation. I've had to stress this and a few other aspects to be very clear on certain topics and give a real clear view on why all the different line items would be put into the character names the way they were. Plus, it allows me to show you all the line items in context as well. This way when you go to study any of this on your own some of those questions that had me pretty stumped are already outlined for you, and you can just expound on them on your own.

To describe what I mean.

Here is a list of techniques or technologies available that are using - or would be using- electromagnetics:

Cell phones, Cell towers, Vehicles, Headphones, refrigerators, wifi boxes, heart monitors, CAT scans, satellites, cars, lights, heavy machinery, MRI machines, x-ray tech, local oscillators, inverters, fiber optics, microphones, satellites, and internet boxes.

None of these technologies would be made possible if we didn't have the electrical grid. Devices to create **static electricity** began in the 1700s. Did you know that the US **electrical grid** dates back to 1882? History says the first electrical supply was just a year prior in the United Kingdom.

Militaries are now using these systems to gauge the weather and to engage in enemy targets, **geo-engineering** facilities would use these systems to help make it rain, the **medical sector** would use these systems to help a patient feel better by implementing frequency-based healing techniques and to gauge the health status of communities. There are also systems put in place that record illnesses, bomb threats, air quality, earthquakes, land changes, and more. The thing about this is. Militaries used these systems long before they were installed.

Here are a few related mentions in the cipher who would be actively using technology and software in direct relationship to.

- ✚ [NOAA](#) tracks the weather – space weather – this corporate technology would allow them to see what weather is, measure electromagnetic fields, and even help them in launching rockets at a specified target.
- ✚ Local news networks use the radar Doppler that tells the weather or what the air quality is going to be.
- ✚ [SOHO – solar weather](#) is measured and made available for the public. To keep us alert to solar flares and other space weather anomalies.

The support systems and subsystems enable a smooth transition from order to execution and all of it is documented via radar systems and databases.

- ✚ [Spaceweather.com](#) helps people keep up and make some sense of the jargon you didn't learn in school. There are interesting topics relating to **geomagnetics, geostorms, and solar weather**. If you would like to get geoeengineering information -that's reliable and professionally proven to be accurate, you should probably look at [Dane Wigingtons](#) material on his website, and even think to join global fighters in his call to action.

The list is not limited to this and far more extensive.

The book that prompted me to develop the cipher itself had some interesting statements that I do believe may be wise to point out.

On 29 "Therefore, my dear boy, make ready and go forth once more in search of new marvels. The Learned Don Fum's chart will stand by thee like a safe and trusty counsellor."

In this book, the writer references a kaleidoscope and how you can pull it out to extend it, then you can see more. The cipher is like a microscope that you can extend. When you magnify (pull out the extension) you can see things down into their lowest component. At the smallest point, there are nothing more than all those things you see on the surface, which in this case would be those things I placed in the lists above. When you expand on those you see chemistry teams, minerals and chemicals used, business models, technology, software, and smaller businesses that are related. That is why I am weaving in and out of the higher aspects into the lower. Most of what I've stated is not proven yet either. When we lack information in certain areas we can't make viable assessments.

In an interesting tidbit concerning the grid.

Nearly 30 years after **Thomas Edison** unveiled the country's first power plant the Spanish flu came in and wiped a heck of a lot of people out. He unveiled the country's first **power plant** in lower **Manhattan** named **Edison's Pearl Street Power Station** first powered 85 customers and made enough power to light 5,000 lamps. (EIA) As you can see, Thomas Edison and electrical grid are line items from the cipher. So is the location in which the first power plant was created. Historical moments and important names are a part of these strange directions. Since I pretty much slept through history class, and there wasn't a real interest to learn anything about the past, (up until I was engrossed in learning and researching these contents), it was not until recently I found some really interesting tidbits pertaining to the energy grid. When you look at the history regarding electricity. It is said, "it improved the quality of life for many people." But I don't believe that to be true now, because of what Don showed me and the many questions that formed when looking at the history (all of which I keep pointing out).

History tells us, in the early 1900s competition led to growth of unregulated electric companies. This doesn't seem important, even though it's a piece of history, but to look at things from a different perspective and analyze why all these different line items were in the cipher together, I had to ask myself some hard questions along the way.

For this cause, I'm being hypothetical here.

Is it possible these different electrical companies were strategically placed to cause people to get sick? Is it possible that they targeted entire communities or specific bloodlines? Is it possible that Ferguson establishing "separate but equal" zoning ordinances that specified, white, mixed, or black districts had something to do with it? After all, it was around 1910-1915 that many large and mid-sized cities adopted **racial zonings**. (WIKI,Racial) And, to make matters worse (or more insane) to think about, **blood groups** and ethnicities are also embedded into the cipher. Why else would blood groups be embedded into Don's directions? Then you also have locations as a grid and certain areas in different states being targeted based on **demographics** and **financial status**. Am I supposed to assume this is only a coincidence?

Let's cover some facts, more key terms found in the cipher related to this and pose some more questions. Otherwise, we are lacking too much information to come up with a plausible answer.

Energy lines – or electrical lines – create **magnetic fields** whenever power is flowing. (Nagwa) This should tell you. We are surrounded by magnetic fields (unless you live in the middle of nowhere with no power and even then, you encounter it daily.) This isn't a topic to be brushed over lightly either. It's imperative for you to learn more about it.

The electromagnetic spectrum is the range of frequencies (the spectrum) of electromagnetic radiation and their respective wavelengths and **photon energies, which is light energy**. Photon energy (light energy) is energy that's carried by one single photon. The amount of energy it carries is directly proportional to the photon's electromagnetic frequency, which makes it equivalently, inversely proportional to the wavelength. The higher the photon's frequency the higher the energy.

To calculate anything related to light energy, electromagnetics, or photons you'd need some skill in physics and a knowledge of the different forces. That's where our **physicists** come in to play. We aren't going to come close to their level of ability reading anything I produce. But we will get close to forming equations needing solved, that they would deal with, in a way that a kindergartener would understand the main goal, its drivers, and anything else related to it. I can assure you. Don understands this system better than the worker bees in the system.

Pink is the highest frequency color we can see. When pink is around us, the electromagnetic wavelength is at its highest strength. This is greater photonic energy. If we were to enquire about what we would call someone that studies

electromagnetics our answer would be an **accelerator physicist**. If we have any questions regarding these life forces, looking up **accelerator physics** would prove to help. Although, it seems to me they try extremely hard to make it appear as if you have to be really smart to know what they're talking about (and in some ways they're only right because of the jargon they use) it's wise to note that you can understand anything you set your mind to learning. So, don't be afraid to venture off into those topics you didn't go to school for.

In March of 2023, **The University of Sydney** and the **University of Basel in Switzerland** demonstrated the ability to manipulate and identify small numbers of interacting photons, which are packets of light energy. The Universities publication says. "Research could advance medical imaging and quantum computing." They say that the way light is observed to interact with matter "continues to entral scientists and the human imagination, both for its theoretical beauty and its powerful practical application in fields like metrology and computing."

CERN was created in September of 1954. The instruments at CERN are *purpose-built* according to their website. (CERN, about) They research atoms. How did they not know anything about atoms and the light associated with those atomic structures to research them? I mean, according to what we have learned. It's not possible that they knew about the light in cells until the 1900s.

At an intergovernmental meeting of **UNESCO** in **Paris** in December of 1951 the first resolution concerning the establishment of a **European Council for nuclear research** was adopted. CERN says, their understanding of matter goes much "deeper than the nucleus." Let's also note that CERN is often referenced as the **European Laboratory for Particle Physics**. So what we are being told is they knew matter was what the world was made of, so they were researching it and they didn't learn that man was made of matter and it housed light until 50 or so years later?

That makes no sense to me.

- [Brigtenyourmood.com](https://brigtenyourmood.com) has an article that says: "Over the past thirty years, there has been intense research on the role of natural light in regulating seasonal cycles, circadian rhythms as well the functioning of the endocrine system. These studies are increasingly finding that when light is **intentionally directed toward the eyes**, it can be effective in **controlling the body's** biological rhythm".

Oh wait!! A television and a cell phone both intentionally direct light into our eyes. But this can't have any relationship. Or could it?

Light affects people to the point of being able to take over the bodies biological rhythms. This sounds pretty advanced to me. But why are they saying they're just now looking into it? Does this mean light beings can be controlled by light? How freaking wild is that thought? Might I add? This sounds like a sci-fi plot! Could there be any truth to it? Were the movie producers aware of this being the case because they were prophetic in nature or did someone know something and was trying to prepare us for it a long time ago.

What if I told you the truth sounds more like the sci-fi plot than the narrative? Would you believe me without a substantial amount of evidence? Well, it's good I brought the evidence. Cause this proves what we read in scriptures and then the work around it makes it undeniable. Let me emphasize here. If you ask leaders in the industry they will tell you, we are many years away from developing systems to control humanity. But I can assure you. These people are either lying or they're simply uneducated.

Heck, I might as well ask. Isn't it funny Star Trek had flat screen TV's long before they supposedly came out? If they weren't already developed when we had our big tv's on the floor how the heck did we see them on the big screens? Did they have CGI to manipulate the big ones to look that way? Or were they showing you something and you didn't catch on to it? Anyhow, I bet that means nothing.

At least for those who refuse to acknowledge the truth.

An [article published on March 8, 2023](#), talks in detail about researchers who are trying to harness electricity in the body. In this publication. The author Sally Adee says, "scientists are looking into ways to manipulate the body's natural electrical fields to try and treat wounds, depression, paralysis, and cancer." She has a book titled: [We are Electric](#). This book is about medical and tech researchers experimenting with ways to manipulate the electrical fields for the human body to treat or cure disease. The linked article about Sally Adee's book says, "it is believed that conditions like broken bones, cancer, and paralysis can be rectified with the electrical waves."

A 2023 publication is saying this is hypothesized and not developed yet. Well, is Sally telling the truth?

The funny thing is, in 1930, [Dr. Royal Raymond Rife](#) invented the Rife machine. Dr. Rife presented patients who were ill with cancer that used [frequencies to heal that cancer](#). The overall gist of his work was based on microscopes that made it so he could see the smallest cells, and he knew they were based on a color spectrum, so he created sound waves to target those cells and manipulate their behavior. This is in the 30s! How did this guy even know he could do that?

There had to be studies and other leaders to give him some idea of all the basics (at the very least) available to Dr. Rife for him to come to his assessments and development of the Rife machine. Is someone going to try and convince me they didn't know anything about this?

Rife's work said, cancer cells and healthy cells would have a different color when viewed. He was able to use this knowledge to apply frequency to the patient and people healed. Ole' Raymond passed away at 83, and reports said, "he died unhappy that he failed in his work," but there is something extremely odd about this report. Just before he passed away, they gave the man a banquet called "the End to All Disease." Then in 1934, the **University of Southern California** appointed a special committee to research the possibility of him healing cancer with frequencies. 16 people with cancer were called in, and in the time of conducting the studies, all 16 people were cured.

So, how did the guy fail?

His grandson is now teaching some of those things he knew about his grandfather. The story he tells helps us to understand. He thinks they killed his grandfather - cause just after his death people came in and cleaned out the guy's offices - (Btw, no one knew who they were) and his work remained a hidden secret from the public for many years to come. Why else would they hide his work, and why do they tell the people, he was disappointed in himself cause his work failed?

To make the story more intriguing. In 1987, a company that goes by [jwllabs](#) began selling rife frequency instruments. That is over 30 years ago. How much information did the company have about Doctor Rife?

Royal's grandson says those machines aren't what his grandfather developed. He says they're basically a generic version (or a knock off.) He began having the RIFE machine made the way his grandfather did because there were papers found elsewhere - that those men who ransacked Royals offices - didn't know about. (Smart man Dr. Rife) This allowed Royals grandson to replicate the machine. It's on the market today. Please, go check out Matthew Rife and buy you a machine. Tell him a girl named Carmen referred you (please and thank you). I'd like to contact him myself. Cause I need one of them machines.

This happened in the 30s.

Dr. Rife knew all about frequencies healing people, which is why the **University of Southern California** threw a banquet for Rife called "the end to all disease." On another note, let's also point out this author Sally Adee's "we are electric" book

was just put out. Why did Royal Rife know this in the 30's and Sally is claiming they're just now learning about it?

Could it be that Royal Rife knew about the work CERN was doing?

Need I prove that there is a broader meaning to the brightenyourmood article's statement of controlling the body's **biological rhythm** that says light interacts with DNA? Because light interacts with DNA, the light we have in our homes, in the workplace and places we visit, would affect us. Why don't we know more about this as a whole? If you knew the blue-light screen you're holding to read this is effective at controlling your body's circadian rhythm would you use it nearly as much as you do?

Why is Sallee Adey saying that they're just now looking into it? Why is the University of Sydney and in Basel, Switzerland just now saying they have demonstrated the ability to manipulate and identify small numbers of interacting photons, which are packets of light energy, as if this is a new finding? Are you going to tell me you expect me to believe that they had no idea Rife's work existed?

Seriously? Come on.

Okay, Okay. Let's rationalize this.

I realize that we have a lot of missing context at this point, but I'm going to rectify that situation, with all the key terms we are about to explore. Before doing so I must say.

It isn't hard to conclude (without a doubt) that DNA responds to and interacts with the electromagnetic fields (that make up the fields of light around us) and they knew this back in the 30s. However, it's become evident to me that someone (or someone's) went through great lengths to ensure the people did not know.

Is it possible that CERN was actually being used to manipulate matter in groups of people to cause them to die at an earlier time?

The DNA, and the health of the body are **very dependent of light** and this applies to a lot of matters in life. For instance, if you celebrate the pagan holiday - known as Christmas - (Christ Mass) and you had known this before, would you have been selective on the lights you leave in your home - at that time of the year? I've met a guy who leaves Christmas lights on all year long simply because it helped him to feel cheery all year round.

These are the sorts of questions everyone should be asking themselves. After all, regular light bulbs have now been banned, and LED's is all one is able to use. Shall we just ignore the many health issues the world has and the relationship between light and life? Is this why there is an LED push to ensure they're used in all homes? If it is being done under a guise, how can it be for anything other than nefarious purposes, and how would one find out without studying it a lot or listening to those who have? Who will talk for people when all those who do talk get killed (unless they're covered under the blood of Jesus and there are very few of them anymore). Heck, have you ever independently thought about these things?

The information we've covered already tells us that the blue lights are traveling along a certain wavelength that can be measured using the RF frequency measurements. So now, light is a product of electromagnetic waves that operate as frequencies. **RF frequency** is a part of **Telecommunication**. The telephones from back in the day were a major advancement in the widespread use of **RF frequency**. That doesn't mean that's when it began or was just discovered either. This just means that is when mainstream took to widespread use.

The **FCC** is independent and federally run by Congress. It was created by the **Communications Act of 1934**. They combined and organized federal regulations of the telephone, telegraph, and radio communications. These are the guys who should regulate anything that could harm us or the environment. (BJA, The Communications Act)

The Radio waves are said to be entrusted to the public. That doesn't mean they are. Citizens are told it is and for the most part we the people believe that to be the truth. However, that doesn't make it the truth. Industry leaders say the people are "to use this publicly owned resource for the greater good." In regard to the radio waves. However, conjecture from people who know the history says. "The people are not in control. It is the **Federal government** who controls what we hear and see. It is also widely known that there's a totalitarian power over the broadcasting industry." We are now easily able to identify them because of the control of information we see happening on a wide scale in every sector.

I'm not the one who said it! I'm just telling you what I learned! Why would there be a totalitarian power (a dominating force) who wanted to control the radio waves?

Congress oversees FCC regulations such as "radio, television, wire, satellite and cable in all 50 states, the **District of Columbia** and U.S. territories." The FCC is required by the **National Environmental Policy Act of 1969** to evaluate

the effect of emissions from FCC-regulated **transmitters** on the quality of the human environment. This means that they're supposed to be looking out for the citizens. Even though our immune systems show the world that we are unhealthy - and dying at an alarming rate - there is no federally mandated radio frequency (RF) exposure standard because they say, "you've no reason to be concerned." And everyone blindly believes that nonsense. Those who don't are ostracized.

We are told the **FERC** is a notable and trustworthy source serving as an economic regulator for **interstate transmission** of electricity. You should already know electricity is part of the electromagnetic spectrum. We don't really see lights coming from electrical lines though. They have a thick plastic cover over them, but if one snaps and the power is on, you can see colors flying then. The electricity in transmission lines is transported at voltages of over 200kV to maximize efficiency. Voltages of 220kV to 500kV are typical. The supply in our homes is 230V. However, it's still much higher to deliver it into homes. The semantics and specifics found in the electromagnetic systems are terms that you and I, unless you are an electrician or working in the energy sector, wouldn't ever really need to understand in their entirety. So how would either one of us know if those numbers are higher or lower than the ELF/ELM numbers (using their respective measurements) that are laid out by regulators? I mean, without going to school for it. What need do we have to learn?

FERC oversees the reliability standards for the bulk **power system**, the interconnected system of **power plants** and **transmission lines**, and our health is supposed to play a huge role in those standards. Heck, it's the reason these agencies exist. The **FCC** would be the ones citizens count on to keep NASA and the **Department of Defense** in check. They would rely on the FERC to set standards that wouldn't harm human health.

These agencies are to be **Ethical in Legal and Policy (research issues)**, and you trust that they will be, so you don't ever think to question them. Is there any reason to question them? Well, if you ask me. You would really never have an inclination to do so. The world stands behind them. So why would we doubt? Besides, that would take a lot of people to back a lie so paramount. Right? So, that's impossible and we really shouldn't even consider it, because that's so big, it would be impossible...

Or would it?

One of Darpa's webpages says they have found **energy in history** with "transport breakthroughs like the **Roman roads, railroads, mechanized**

warfare, and air-refueling tankers that more rapidly and resiliently flow energy through the battlespace.” (DARPA)

Darpa’s POWER aims to create a “**revolutionary power distribution network.**” They want to leverage **wireless power** beaming to create a “dynamic, adaptive, speed of light wireless energy web.”

In [2012, DARPA announced](#) another project in which they were “soliciting input on a wireless communications foundation that would provide high-speed streaming” (100Gbps). Their goal was “to utilize airborne assets to provide high-capacity data streaming over 100 kilometers for ***air-to-ground links*** and 200km for air-to-air links”. This communication goal of DARPA’s would be directly related to the fiber optics system.

Dick Ridgway is quoted as saying, “Providing fiber-optic-equivalent capacity on a radio frequency carrier will require spectrally efficient use of available RF spectrum.” The biggest “***challenge at the time was the weather.***” (CNET)

Ah, this may seem a bit off to say. However, they fly over me all the time every freaking place I go within two weeks. When I go places that aren’t in a normal flight pattern it is often said. How strange we don’t normally have fly overs soon after my arrival. They hover over too (as if they’re monitoring someone). I just so happen to know. That somebody is me. This tends to scare people and they try to distance themselves away from me because of it.

Anyhow, according to Don and the encrypted grid it seems they accomplished the goal of taking full control over the weather.

Think about this. Modern technology is being implemented to predict storms. What if that same technology can be used to create the storms? How would we the people know?

Media?

Don’t you know they’ve been known to lie? After all, they’re owned by a handful of people and laws around the sector give power to lie so as not to “stir up the American people.”

Let’s cover some more key terms.

Southern oscillation, northern oscillations, is a part of this system of electromagnetic waves. In theory, it is relative to space weather. However, there

are so many other applications, technologies, and systems that use the electromagnetic spectrum that would also have some kind of relationship to these terms.

Southern Oscillation is a [oceanography](#) and [climatology](#) term, related to [atmospheric pressure](#) over the tropical **Indo-Pacific region**. It's called **ENSO** and you can find details on the [National Weather Service](#) dot gov site.

The **Optical Local Oscillator** is one of the key terms. Another is Local oscillator. "In [electronics](#), a **local oscillator** (LO) is an [electronic oscillator](#) used with a [mixer](#) to change the frequency of a signal. This frequency conversion process, also called [heterodyning](#), produces the sum and difference frequencies from the frequency of the local oscillator and frequency of the input signal. Processing a signal at a fixed frequency gives a radio receiver improved performance. In many receivers, the function of local oscillator and mixer is combined in one stage called a "[converter](#)" - this reduces the space, cost, and power consumption by combining both functions into one active device. Local oscillators are used in the [superheterodyne receiver](#), the most common type of [radio receiver](#) circuit. They are also used in many other communications circuits such as [modems](#), [cable television set top boxes](#), [frequency division multiplexing](#) systems used in telephone [trunklines](#), [microwave relay](#) systems, [telemetry](#) systems, [atomic clocks](#), [radio telescopes](#), and military [electronic countermeasure](#) (antijamming) systems."

A local oscillator would/could and is acting as a collaborative tool.

. As an interesting tidbit about my experience with one of these. There was a time where I was out and tried to use my phone and they were using a **jamming system** to keep me from being able to make calls. It would be nice if I had an **anti-jamming system**. ([WIKI](#)) I must admit, at that time, I was petrified of what they had in mind to do to me. My heart raced and my mind thought of all kinds of sick things. I was absolutely petrified.

Do yourself a favor and be sure to really look at the list of associations a local oscillator has. You should see they're used in devices you have in your home and by militaries.

If this one device is being used in radio's relay systems, microwave relays, and in devices you find in your home. Do you believe they can access that? They use them in their very own devices, would be good at using them in different ways - or in different applications to achieve whatever the goal **target analysis** or **reconnaissance** would require - how would they not be able to access the ones you could find in your home?

They developed the system and just let us use it. They didn't get powerful cause they were stupid. They've kept secrets men die over for many centuries. Ignoring their presence is ignorance at best.

An **autonomous system (AS)** is a network or a collection of networks that are all managed by a single entity or organization. It's also considered a **heterogeneous network** typically governed by a large enterprise. An AS has many different **subnetworks** with combined routing logic and common routing policies. A **heterogeneous network** is a network with connecting computers and other devices with different operating systems and/or protocols.

Simply using local oscillator, we can see how it could be used in one network and employed with subnetworks as well. So, this means, a distributor of local oscillators would have militaries world-wide as a consumer and local cable network providers would be too and they would be able to be tied into the head of all the systems.

Artificial intelligence:

The list is fairly long, but here is one example of recent headlines.

[SAS commits \\$1B to AI-powered industry solutions - PRN India News - Webindia123.com](#)

If we looked at some of the lower-level key players here is what we can see:

Here are a few electrical companies listed in the cipher:

- General Electric
- Électro Gaz Diffusion (French: Electric Gas Distribution)
- Ohio electric motors (est. 1917)
- Électricité Générale Domenoi (French: General Electric Domenoi)
- Ormat Nevada Inc. (energy firm)
- Emerson Electric Company St. Louis MO (control techniques)

Department of Defense website.

*"The U.S. electric grid is made up of more than just power plants. It includes transmission lines designed to **transport energy** over long distances, and **distribution systems** that carry electricity to the individual customer. It is a complex network of asset owners, manufacturers, service providers, and government officials at the federal, state, and local levels, all*

working together to provide reliable, resilient, and secure electricity.”

This public statement from the D.O.E. says there are **interoperability requirements** and **data interoperability** between multiple federal, state, and local governments. They work in conjunction with **asset owners**, manufacturers, **service providers** and electrical companies.

It is commonly known that wireless communications began with the understanding of magnetic/electrical properties that had been observed by Greek, Roman, and Chinese cultures, in the late 17th and early 18th centuries.

The US Government is recorded as having sent the first telegraph “What God hath wrought” in 1844. This is nearly 100 years after the first demonstration of electricity. What an interesting statement to make in the first telegraph. If God isn’t real (as so many believe) why do we base our calendars on the death of Jesus, and why do governments pay homage to Him? That makes no sense whatsoever. Considering the circumstances in which I’m writing this - that’s an interesting first message to realize they sent.

I don’t wonder what God they serve. It’s clear to me. They are satans puppets. Unfortunately, for them. We can spot them much more easily these days because their fruit is bad.

Anyhow. This is nearly 100 years after the first demonstration of electricity. Is it possible it took them a 100 years to get people to accept electricity because they knew in their hearts something was wrong with it? Or maybe – just maybe – the people felt the differences when they were around it. After all, we’ve been around it most all our lives and think it as normal. I’d never had of questioned whether it would make me sick. If that were the case. I’m sure we’d find no stories on it. However, look stories up online and you see people commenting about how they get headaches around towers and so on. Why isn’t any of this in medical journals? Oh, wait! It is, it’s just been hidden from the people. Also, do books that talk about the subject of matter (like the one Samuel White wrote) exist because they’d already been studying matter for quite a long time, and they were looking to find ways to introduce it on a wide scale, in the 1700s? Is that why there seemed to have been a huge discrepancy in historical accounts and that’s why the **mudfloods** of Tartaria conspiracy has been floating around? Did they create that narrative so that the people would never put their finger on

the technology aspect and connect the fact that they had this technology long before they ever implemented it on a widescale?

That's a thought I will ponder for awhile. (chuckles)

A PubMed article states: "In 1820 a Danish physicist Hans Christian Orsted discovered the electromagnetic field. Then in other reports. In 1864, [James Clerk Maxwell](#) is documented as having been the one to demonstrate a connection between two kinds of forces associated with electricity – electric and magnetic. He was able to show these two forces involved the **velocity of light**. The world's narrative currently says, 1864 is the documented era scientists began to show this idea that "light was an electric phenomenon." There was also the discovery of radio waves, and the [theory of relativity](#), which brings us to where we are today with present-day physics. This means that Fritz's work in photobiology isn't an accurate account. Unless they're saying that they never tried to look at humans in the same manner that they viewed the Universe. Yet, that wouldn't make sense either seeing as Philosophers developed the theory on matter and man was at the "center of the cosmos" back in the 5th century.

It doesn't add up.

How did they not notice the waves could be generated and travel when they first discovered it in the 1820s? How did they demonstrate wireless communications in the 17th century then?

Also, why does the history of it all not just give timelines on when someone found and named something, and then place every learning curve on top of that, until we have an accurate historical timeline that shows its developmental stages?

Heinrich Rudolf Hertz, a German physicist is said to have been the one who invented electromagnetic radiation in the microwave and radio regions of the spectrum between 1885 and 1889. How did he invent it if Orsted discovered it? Then there is radio waves (which is the longest wave in electromagnetics) that's used to send the first telegraph. It was sent in 1794. So, how the heck was the telegraph sent when you have to send electric signals across wires if Hertz didn't show that could be done until the late 1800s. I know. I know. There will be those of claim I don't know what I'm talking about. But, come off your high horse. I may not be that smart but I'm also not stupid. It doesn't add up.

However, any one of us view it. There are many questions to pose. Can you see what I mean? Call me crazy. However, it doesn't add up and you can't

deny it. They say Hertz “demonstrated the generation, transmission, and reception of electromagnetic waves, which became the basis of **Radio Frequency communication.**” But didn’t Maxwell show they can be generated and travel through free space? How the heck is this any different? And how did they send the 1st telegraph then?

Do you get my drift? Do you see why I have chosen to really talk in detail about specific topics? It may seem repetitive (as it was purposefully done). But it has been for a good reason. I didn’t go to school for any of this stuff. You probably can tell I’m not qualified to even write about this stuff.

How does one man take credit for inventing something that the Ancient cultures knew about? Wouldn’t it be wise to notate that the Ancients were acclimated with the Universe of things given by God, or do you think I’m reaching? No one invented electromagnetic radiation. It existed before anyone of these guys ever showed it. Otherwise, there would be no ancient artifacts depicting these systems. Besides, how did the Ancient Greeks use this system for astronomy and to navigate the oceans if we didn’t learn anything about it until much later?

Moreover, why do those reports say different things about this very subject and where it generated from? How come they make it seem so complicated when it’s really cut and dry? Is there something they could be hiding? Of course there is.

No one invented electromagnetic radiation. It existed before anyone of these guys ever showed it. Otherwise, there would be no ancient artifacts depicting these systems.

Right now, there are some important “big names” dealing with technologies, software and more (besides the electrical companies) related to this grid based around electromagnetics in a closed system that are covered by **National Security Laws.**

["NASA's scientific instruments use the full range of the electromagnetic spectrum to study the Earth, the solar system, and the universe beyond. When you tune your radio, watch TV, send a text message, or pop popcorn in a microwave oven, you are using electromagnetic energy. You depend on this energy every hour of every day.](#)

This just says every time you send a text message you are using the electromagnetic system. It also says, the device you use to send that text message is capable of transmitting electromagnetic energy. But they tell us not to worry about it. It doesn’t affect you at all. So don’t even trip about anything regarding that subject

matter. Heck you're too dumb to figure it out anyways. You must be an astrophysicists or something to know anything about it.

Bull crap!!

You aren't dumb at all and how dare them insinuate that anyone of us is.

Related Key terms that Nasa would be familiar with:

- **Overland radar technology** in the early 60s the USAF defined new systems for airborne technology. This is right around the time NASA was created and then in 69 they claim to have went to the moon.
- **Spy-7 Radar** is the most advanced radar technology.
- Over roof-top (electromagnetic wave propagation) – there are three types of modes of propagation of electromagnetic waves. Ground waves, space wave propagation and Skywave propagation.
- **NASA Astrobiology institute**: These guys believe they can go on space missions that will answer the question of how life begins and evolves and does life exist beyond the Universe.
- **Notifiable avian influenza (surveillance system)** the **USGS National Wildlife Center** conducts surveillance in wild birds to facilitate early detection and situational awareness for high consequence pathogens...
- **National Aerospace Initiative** was conceived as a joint effort between the DOD and NASA to sustain their aerospace leadership of the US through the acceleration of selected **aerospace technologies**.

SETI institute studies radiofrequencies to see if they can communicate with **extraterrestrials**. The institutes mission "is to lead humanity's quest to understand the origins and prevalence of life and intelligence in the universe and share that knowledge with the world."

How cool is this? Can you believe it? Maybe your kids – or even mine – will one day have full-fledged conversations with aliens? What do you think? You are paying to find and talk to a bunch of aliens. This has to be far more important than the homeless veterans who need to find housing. The real problem here is. You are the alien. But I'm going to stray away from that topic, for now. You can bet your arse I'm going to leave you with the links to get that truth from a very awesome Prophet who comes with supernatural teachings and the love of Jesus. Don't forget to look for that at the end!

NASA works with RF frequencies in their "space missions." SETI – is another agency **Federally funded** and run alphabet agency – who are aiming to meet ET's outside of our Universe, using frequencies to send signals.

Does it take a rocket scientist to surmise how essential it is for the American people to hold these agencies accountable? I can assure you, someone needs to 'man them' to make sure they're doing everything by the books. But then again. They're alphabet agencies who work with one another! Who cares? Right? We should not question them guys! How dare I do something so crazy and anti-American of me! What a disgrace to humanity (hand on face)...

21 billion dollars for NASA, 4.119 billion for DARPA, and 388 million for the FCC isn't nearly enough reasons to question anyone of these agencies. Besides, the American people holding these guys responsible shouldn't be our duty. Especially because working with Russia and China on the downlow seems to be a fashionable statement in the intelligence industry. Normalizing these underhanded tactics make it okay. And if you dare step out of that normal box of thinking. You will be targeted, called out for your inability to believe them, and quite possibly jailed for thought crimes against them.

What a freaking JOKE!!

You need to repent NASA!

Heck, I found out NASA has relationships with both Russia and China, which wouldn't be weird if these nations weren't threatening to bring war onto American soil. A quick surface-level google search turns up articles saying most of NASA's cooperation with Russia is conducted through Roscosmos. It was established in 1992, as the **Russian Space Agency (RSA)**. In 1999, RSA's mandate was expanded to include the **aviation industry**, at which time its name was changed to Rosaviakosmos, **United Rocket and Space Corporation "Roscosmos,"** and United Rocket and Space Corporation (URSC). "This is all in the name of "human space flight activities." It's weird how an entire **aerial network** is put into the cipher and it's freaking global at that. Who could think this stuff up? Surely not me. I'm way to ignorant for that.

Mind you, NASA also cooperates with the following organizations:

Rocket and Space Cooperation (RSC) Energia, **Khrunichev** State Space Research Institute of Engineering (TsNIIMash), **Mission Control Center-Moscow (TsUP)**, Gagarin Cosmonaut Training Center (GCTC), and the **Institute of Bio-medical Problems (IMBP)**. In space science, NASA also cooperates with the **Russian Academy of Sciences (RAS)**, including the **Institute of Space Science (IKI)**. Russia and NASA have a long history together. One of the major topics...

DRUM ROLL PLEASE...

Space biology and medicine. The cooperation between these two began in the 70s. Right around the same time Steven Spielberg produced Close encounters of a third kind. Surely there's no relationship. I'd be crazy to think there was, wouldn't I? It may also be wise to point out the origin of NASA relates to a German Scientist behind the secretive experiments pulled off in Hitler's day. But they severed them ties, so there couldn't be any relationship there - Right?

But, what if there is?

What if they began testing this stuff on the people in the 70s on a larger scale than ever before? Could that be part of the reason why Agent Orange was such a big deal in the 70s and is being brought out now (as if they really want to do something about it?)

When the **Soviet Union** was dissolved, the relationship appeared to be as well, but working in the name of secrecy for **research and development** of Russia's instruments in the **robotic probes** to the **Moon and Mars**, research on Russian **bioscience spacecrafts**, and the support of the successful **International Space Station (ISS)**, which is a multinational effort with participation by the **United States, Russia, Japan, Canada**, and 11 member states of the **European Space Agency (ESA)**, is important enough to sweep under the rug the status of that relationship. Heck, I wonder how American political leaders felt about that? What about JFK? Did he know something, which is why he did the President verses the Press speech? Could what he have known have to do with this? After all, the press is directly linked to telecom.

Mind you, you hold that device as you send those messages. So, where are all the studies on how the public health has been since they brought out the cell phone?

A [Darpa webpage](#) reads:

*"Radio frequency (RF) and **microwave signals** invisibly permeate the environment around us, carrying everything from radar signatures to the data **from our mobile phones!**"*

Our cell phones emit radiofrequency radiation (radio waves) from their antennas. Studies have been conducted to show the effects radiofrequency fields on the brain **electrical activity**, **cognitive function**, sleep, heart rate and

blood pressure (and they claim it's all been done 'on volunteers'). Its documented, "research does not suggest any consistent evidence of adverse health effects from exposure to radiofrequency fields at levels below those that cause tissue heating," by the ([WHO](#)).

Both optical and [RF signals](#) are part of the [electromagnetic spectrum](#), with RF having longer wavelengths and [lower frequencies](#) than [optical signals](#). The RF part of the electromagnetic spectrum is in the 3 kHz to 300 GHz range, while light (infrared, visible, and ultraviolet) is in the 300 GHz to 30 PHz range. In a [PubMed journal](#), it is reported that cell phone usage [induced stress](#) and had other "negative effects on the central nervous system nerve cells, including [neuronal cell apoptosis](#), changes in the function of the nerve myelin and ion channels; RF-EMF act as a stress source in living creatures." They go on to say, the effects of the RF-EMF on the human body "needs more study." ([PUBMED EF Field](#))

So why is there such discrepancies between medical journals and world leaders?

Looking at the history of [DARPA](#) we see they were formed in 1958 by President Eisenhower in response to the Soviet Union's successful launch of the first satellite ([Sputnik](#)). They've recently celebrated [60 years of accomplishments](#). If it weren't for DARPA's accomplishments materials science wouldn't be where it is today. [Radar absorbing materials](#) is a product of [materials science](#) and things like [polymers](#) are the base products.

DARPA's 'Metabolically Dominant Soldier' program, or later, 'Peak Soldier Performance' is their superhuman or super soldier program that's a direct result of this wireless grid they wanted to install. DARPA's performance enhancing strategies revolved around the subject of powered exoskeletons and other types of equipment like fabrics with interwoven "[nanomuscle fibers](#)". This 2002 program aimed to help troops with sleep issues, stress, fatigue, pain, and more using materials science based applications. [DARPA has a pretty lengthy history](#) and without their accomplishments we wouldn't be where we are today.

At the [Department of Energy's dot gov site](#) this excerpt can be found:

In 1959, the famed physicist Richard Feynman said in a [prophetic lecture](#) that there was "plenty of room at the bottom." Feynman meant that exploring and manipulating materials almost atom by atom would create huge

opportunities for new science and important new technologies. Today that "room at the bottom" is called nanoscience. It is an important part of research in physics, chemistry, materials science, and biology.

We can see here the D.O.D has outlined an infamous statement of Richard Feynman related to **material science**, which is a part of the cipher and **materialistic philosophy** is another line item, knowing the difference between materialistic philosophy (**materialism**) and **material science** becomes important to further our knowledge base.

To help formulate the mental picture these directions give we need to explore some things more than others. This is one of them. Materialism has been criticized for reductionist tendencies, which limits peoples' understanding of complex systems by focusing exclusively on their constituent parts. Some critics argue that materialism neglects the emergent properties of complex systems such as consciousness that can't be reduced to the behavior of individual particles. Others have mentioned limitations of our empirical methods may prevent us from fully understanding the nature of reality, and that alternative approaches, such as those based on intuition or introspection, may also be necessary. The weird part is, they've found a way to override humanities consciousness and take over the neural processes of the mind, and your thoughts are really not your own. We will see how this is being done before you know it.

Materialism is a philosophical concept that holds that physical matter is the only fundamental reality, and that all things, including a person's mental state and consciousness, can be reduced to material processes. This means, if they want to persuade or even change a person's mental state all they had to do was reduce it to a material process. What do you think owning a mac versus a Microsoft product means? I believe we see that happening today. Science, on the other hand, is a systematic and logical approach to discovering how things in the universe work. In the context of science, materialism is in close relationship to the concept of reductionism, ***which holds that complex systems can be reduced to the interactions of their indivisible parts***. This idea is said to be applied more often in physical sciences, where scientists try to understand complex phenomena by studying the properties of **individual particles** and forces that make up those systems. In the field of psychology and **cognitive science**, materialism is also closely associated with the idea of "**eliminative materialism**," which holds that **mental states** and processes can ultimately be explained in terms of the activity of **neurons and neural networks in the**

brain. Overall, the relationship between materialism and science is complex and multi-faceted, but generally characterized by the belief that the physical properties of matter are the fundamental building blocks of reality, and that all things can ultimately be understood in terms of these properties." ([Emergence, WIKI](#); [Space](#))

Folks, this is exactly what is happening right now in so many ways it's unreal. There is a complex system unfolding within multiple sectors using reduced aspects as propellers within alphabet agencies and their constituents who collaborate using these collaborative tools being mentioned. It's been so reduced that people aren't really able to see the bigger picture.

This need to break things down comes about for a reason. I think that reason has to do with the creation of philosophical men and then theologians. ([here](#)) When they went to develop these systems we are talking about they developed various schools of thought about the nature of matter so as to break it down and then fully implement it in segments. They knew they couldn't present the long term goal to the people. So they had to break it down and implement it in pieces. In fact, historians say [Leucippus](#) in the 5th century BC stated matter is homogeneous. ([Miletus](#)) This historical excerpt allows us to see, these systems were thought about and considered to be broken down into smaller topics and subtopics in the 5th century.

FOR A VERY GOOD REASON!

Homogeneous is one of the main key terms, which is an adjective, that gave me a lot of understanding. It describes something that is made up of the same or similar kind, nature, structure. That can be used to make up people, things, or elements that are alike. The word itself comes from the **Greek homogenes.** ([here](#), [here](#)) but consists of infinitely of small indivisible particles. The system of systems outlined in here is homogeneous and the small parts are indivisible.

I know I just said this. But let's pose the question again. Could it be they used philosopher's, theologians, and schools of thought to find a way to break things down and implement them little by little up until the point where the entire indivisible system was installed? Is this why Southern California University is still a part of the elaborate system outlined in Don's directions? Could it be why they erased the "end to all disease" aspects of Rife's work? Did they know that the world wasn't ready to accept the final goal?

I'd say so. In fact, Don shows me this homogeneous system is the backbone to his directions and it has many layers. The conclusion of the full picture

wouldn't be able to be made possible without knowing many more things in their lowest degree. For instance, understanding materialism, philosophical views, and concepts used, we are able to deduce that they broke the system down into parts and sub-topic parts, without these terms there's a lack of information. Besides, it's hard to make sense of it if we are just looking at it from one direction. And let's not forget. When I first proposed some of these scenarios without showing the evidence it had to have people a little flustered that I would consider such a thing. It's the same thing for all the other aspects of these directions. So, we need to jump from one organization, business, institution, University, technology companies, and processes for us to formulate the proper picture. And we must also be able to make the connections clear. So, this isn't easy. Besides, I'm highly unqualified for all of this. Surely you can tell that by now. Otherwise, all of this would be structured a bit differently, which it was till the saboteur's kept messing with me. (hand on face)

This attribute - of breaking down an indivisible system - works well for every system. It is a corporate model that's employed in **drug trafficking**, **child trafficking**, and materials science too. There isn't a business endeavor this wouldn't work well for. For instance, assassinations. When you're trying to catch someone to kill them for talking - not everyone will kill people. However, a lot of people will get paid good to keep tabs on or report seeing someone - with a ticket on their head - not caring why the one paying them is looking for them in the first place and asking them to be delivered as well. All the perp has to do is find, stalk, report, and then the one who snaps them up - that's a different guy - and delivering them over, well, only the assassin knows what happens then. Heck, even the guy who buries the body may be different. This works in **organ harvesting**, child trafficking, and **molecular biology** systems as well. And since the blue bloods run this world...

Making a homogeneous system that can be used in every market across the board, could not have been easy, but it looks like it was made possible via the minerals of the earth and compartmentalization. It took market readers, analysis, simulations, theologians, and philosophers, and then many years to develop it, take over markets, and to end up where we are today. If you look at the history of taking over the oil industry, the banking system, and the Rothschilds, Bilderberg's, with the other 11 top families you will understand clearly that which is hidden. I haven't found it again so I could put it in this writing. However, I noticed there is an international school that was made to research how to socially steer entire nations. They use specific movie plots, color schemes, and certain topics to do so.

From a corporate business model into action across all channels is considered **market segmentation**. It makes for a **multiplex system**. *The families who rule this world had a vision that's playing out in the name of corporate goals. I must admit. It is a brilliant system. A system of systems with more sub-systems, which is why they reduced all of it and created organizations around those reduced parts.* The result is a **strategic ecosystem** that gives full control to one governmental system globally – just as the prophets of old said it would be.

Written and established long ago by the prophets. Bible prophecy tells us that an end-time power will dominate world trade, international politics and have a global military power, and will lead humanity to the brink of total self-destruction. This has been going on since the tower of Babel. The most recent moves lining them up to achieve their goals come at the end of World-War 1. Misinformation could be spread among target audiences at the time using mass communication systems. ([Wiki, WW1](#))

This is an international goal. A goal to control the entire world, and to do so entails, implementing the mark of the beast aka the RFID chip. It would appear they managed to pull this off using legislative processes (among other things) - across the globe - while shifting people around within their circles of technology advancements and medicine to take control using tyrannical control in the medical sector.

MARK OF THE BEAST

Needless to say, it is very important to understand how it all came together, how they can't be stopped without targeting the root (which is why we need Jesus' cause Satan is the root problem who wanted to rule the host body world.)

Let's look at some more key terms and relationships.

Targeted Neuroplasticity Training is a DARPA project "to stimulate the peripheral nervous system, the network of nerves on the outside of your brain and spinal cord, to facilitate the development of cognitive skills." Let me tell you, I can see how this has affected my nervous system, and it's a pain I can't describe in the pits of my stomach, I have to ask God to help me not to be angry, bitter, or wish people harm because of what they've done to me. Good thing Jesus tells me He will restore the years that the locust and the cankerworm has eaten. I believe it!

It has been suggested that the paralyzed may receive a little device in the spinal cord that will enable them to walk again. I know this firsthand from a paralyzed friend whom I've known for most all of my life. He was told this back in 2016 or 2017. It is called E-Dura **neuroprosthetic implant**.

A quick search shows in [2015 Swiss Scientists announced Jan. 9](#), a **flexible implant** that can be used to help people walk again. However, this wasn't the first device of its kind. There are other devices that have a similar function. (i.e. sending signals to the spine) but are reported as being "too rugged" in the spinal area. They rub against nerve tissues when in movement - which causes inflammation and scar tissue buildup - that makes patients reject the device.

These devices would operate within the same system as one another. They would also use some of the same type of software. These would complement one another.

On another relevant note. Rejecting devices is now a thing of the past. That hurdle has been jumped - back in the 90s - by the way of research and development on unsuspecting citizens (*Morgellons*), and they're onto bigger things.

Get this, advances in molecular biology have been closely related to the development of new technologies and their optimization. These advancements are being implemented now into the human host body for a genetic take-over. On the surface we are flesh and bones. But at the atomic level we are nothing more than a ball of energy or electricity, a whole lot of atoms, that make up our molecular structures. Every one of us have our own unique molecular structures.

The **National Academy of Science** gives out awards in molecular biology supported by **Pfizer. Inc.** The first award was given out in 1962 to Marshall Nirenberg for his studies of the **molecular mechanisms** for the biosynthesis of protein. Jason McLellan received the 2023 award. Biosynthesis of protein is also called **translation** in which mRNA, which transcribed from DNA, is translated into protein. (UT Health)

The spatial arrangement of an atom's material can provide scientists with a lot of information useful to determine specific attributes. This is how they re-create crime scenes and identify people (who otherwise can't be because of body decomposition.) Our atomic structures tell scientists, eye and hair color, personality traits, and everything else that makes you up. This is what is meant by mapping the genome.

The human body is made mostly of water (a molecule composed of two hydrogen and one oxygen atom) and of “organic” molecules, which consist of a skeleton of carbon atoms bound to other elements.

Look friends, not a day goes by that our bodies don't take in new atoms from the air we breathe, the food we eat, and the liquids we drink. These atoms are incorporated into our cells and fuel the chemical processes that keep us alive.

DARPA has been known to use methods - such as the nasal sprays - to put a specifically made substance into the body to help soldiers beat sleep.

According to WIKI:

“Niels Henrik David Bohr was a Danish physicist who made foundational contributions to understanding atomic structure and quantum theory, for which he received the Nobel Prize in Physics in 1922.”

The spatial arrangement of the human body can be seen in the Human Reference Atlas (HRA) and is defined as a comprehensive, three-dimensional atlas of all the cells in the healthy human body. This atlas was compiled by an international team of experts who develop standard terminologies linked to 3d reference objects, describing the anatomical structures of the body. Our eyes pick up on body features. As “an observer you are sensitive to a human head and body, and these features allow observers to quickly recognize and encode the spatial configuration of a figure.” (NIH, How Bodies are special) Essentially, everything we do, see, and portray is encoded into the cells and translated as a mathematical equation.

Colour polymorphism refers to the occurrence of multiple discrete colour phenotypes within populations that result directly from genetic variation. Direct genetic causality distinguishes colour polymorphism from polyphenism, whereby identical genotypes possess the ability to express varied phenotypes depending upon the environment. **Ecologists** and **evolutionary biologists** would be those who concern themselves with this topic.

“Newly synthesized organic molecules can be tuned to emit different colors depending on their molecular structures in crystal form. **Molecular switches** are chemicals with molecular structures that can be shifted between two or more stable configurations in response to changes in their environment. They are of great interest in the development of molecular computers, molecular machines, and drug delivery systems.” ([SCITECH](#)) So, if

we are using colors at the molecular level to identify phenotypes and see different genetic variations – and we are - how possible is it that there is no other reason for the blue/purple lights on the streets other than a defect? I think we will see. This narrative doesn't add up.

Orbital hybridization: [Chemist Linus Pauling](#) first developed the hybridisation theory in 1931 to explain the structure of simple molecules. It is the concept of mixing [atomic orbitals](#) to form new [hybrid orbitals](#) (with different energies, shapes, etc., than the component atomic orbitals) suitable for the pairing of electrons to form [chemical bonds](#) in [valence bond theory](#). Valence bond (VB) theory is one of the two basic theories, along with [molecular orbital \(MO\) theory](#), that were developed to use the methods of [quantum mechanics](#) to explain [chemical bonding](#). ([WIKI 1](#), [WIKI 2](#))

In short, they're using [quantum mechanics](#) to bond two different forms of energy together and color is helping them to identify the different structures. As you can see, these are line items from the cipher. This, in laymen's terms, as I've just said, is using color spectrums at the molecular level to do chemical alterations. So, they aren't in the learning stages. They've advanced well enough into the future they can easily change, alter, and even create their one molecular structure. They can even use color to change your molecular structure.

Key terms:

Sagittal translation is an accidental event that surgeons commonly encounter during spinal osteotomy in ankylosing spondylitis kyphosis. ([Springer](#))

Transmitter/receiver unit (cellular systems)- They can send and receive information in atomic structures. (MC, Molecular Communications) ((pdf found on website)

Covid19 is an **opportunistic disease** that was said to be so bad people needed to be taught how to "fight" the virus via their new experimental vaccine using a man-made nanostructure in the form of a cell called a "protein" - as if our own immune systems do not work and need help to operate.

By reviewing the [history of Covid-19](#), how it began long before this pandemic, and how they have been carrying out its delivery, we can see a pattern. I somewhat noticed the pattern when researching all this stuff and it seems to be the same pattern throughout history. This pattern is a business model. One hid from the public's eye.

I think we should talk about and analyze this in detail. If we applied what little knowledge we have about C19 and the blue lights thus far, we could say, they're using the lights to kill Covid19 in public places to keep the people happy and not afraid of going into public places. At least, that's what they are saying. But there is more to it than that. Remember, blue light kills healthy microbiome on the skin. There is also a correlation between healing cancer and healthy levels of microbiome in the gut.

Messenger RNA is a technology. They say this technology does not change your DNA. They also claim that it is not gene therapy. I say they lie. They say I lie. Who is telling the truth here?

The mRNA gene therapy was pushed onto tens of millions who were in fear of losing their jobs. My son, despite my warnings, took one of the jabs. Some even believed they would be thoughtless and cruel to not get the jab because it could make people around them sick. If you really look at the situation with a fine-toothed comb there's a bunch of situations that would make anyone believe, there's something bigger going on. In my writing this book, I came across one of the more major recent disclosures that helped me to understand.

At an EU Parliament International COVID-19 Summit 3 in Brussels, Belgium held on May, 2023, a US businessman - who specializes in patent auditing named David Martin - spoke this important message.

"In 1965 coronavirus was isolated with the common cold and it was then decided that it was the first infectious replicable model that could be used to modify a series of other human experiences the human condition experienced. At that time, Coronavirus was identified as a vexing respiratory infection called 229 E. In 1966, the COV model was used as the first transatlantic biological experiment in human manipulation."

David goes on to tell us that "nature was hijacked, science was hijacked." This presentation - at the EU Parliament - stems from spurred talk about Nuremberg trials. Sadly, I know a bit more than others because of the blueprint of their plan in the cipher. They're merely admitting to their evil deeds, letting the truth come out, and knowing, there's something far more sinister unfolding. David told meeting attendants. "None of this happened overnight," and using public domain sources he goes onto prove "this was long in the making."

Martin says, just after the 1966 biowarfare situation between the United States and the United Kingdom “they started learning how to modify a coronavirus by putting them in animals such as dogs and pigs.”

News reports currently say, they need new labs because there is a disease that’s mutated and can be given from pets to humans. Don shows me people would be delivering these diseases to the people and pets. I warned people not to eat deer more than three years ago. I also told people how household pets will soon be getting and giving disease from humans.

This is what led to the first coronavirus spike protein vaccine by the US pharmaceutical giant Pfizer in 1990.”

This is not what our current news reporters are telling us is happening right now, and this would be 33 years ago! Current news tells us,

Scientists came together in 2003 to learn how to combat SARS at the atomic level. That’s not what David Martin disclosed. Scientists are recorded BY MAINSTREAM MEDIA as being able to “quickly identify and stop the spread of SARS-COV with around 747 people losing their lives” in 2003. However, they do not mention having the mRNA already developed at that time and according to science journals CV19 is a mutation of SARS. [PMID 33498787](#)

“THE GLOBAL RESEARCH AND DEVELOPMENT OF MRNA VACCINES HAVE BEEN PRODIGIOUS OVER THE PAST DECADE, AND THE WORK IN THIS FIELD HAS BEEN STIMULATED BY THE URGENT NEED FOR RAPID DEVELOPMENT OF VACCINES IN RESPONSE TO AN EMERGENT DISEASE SUCH AS THE CURRENT COVID-19 PANDEMIC. NEVERTHELESS, THERE REMAIN GAPS IN OUR UNDERSTANDING OF THE MECHANISM OF ACTION OF MRNA VACCINES, AS WELL AS THEIR LONG-TERM PERFORMANCE IN AREAS SUCH AS SAFETY AND EFFICACY.”

Prior to David Martins testimony Don’s directions had me thinking. The experimental vaccine came out so quickly after they announced there was a pandemic I would go as far as saying. I went as far as saying it is NOT experimental. Heck, the medical journal tells us these vaccines have been **“PRODIGIOUS OVER THE PAST DECADE,”** WHICH TELLS US THEY’VE BEEN AROUND LONGER THAN WHAT THE NARRATIVE SAYS.

TO TOP IT OFF. NO MORE THAN A YEAR AGO THE CEO OR PRESIDENT OF PFIZER SAID THE SAME THING. THEY’VE BEEN AROUND SINCE BEFORE THE PANDEMIC.

Currently, more and more doctors have awakened to the tyranny and are fighting back refuting the narrative. They are saying the pandemic was planned out by an elite group with nefarious plans against humanity, which is why many are calling this thing a bioweapon. The craziest part is found within the history of conspiratorial groups. Many conspiracy theorists had been saying the elite were aiming to stage pandemics to scare humanity into medical tyranny for the last 20 years. You ever read behold a pale horse? There was so much truth in that book. It is a must read. Bill was one of many conspiracy theorists said the pandemic would be planned out and the elite had patented bioweapons. In fact, they say the reason Obamacare was instituted had to do with this very thing, which is why they purchased 30,000 guillotine under that umbrella term. This is the same thing as to what the docs are currently saying. How did conspiracy theorists know more than 2 decades ago what doctors are claiming to know now? Are we to chalk this up to coincidence?

Countries are reporting low birth rates, The death rate in Ireland has soared to over 17% higher than last year. Our neighbors here in America are ill. I see reports of suddenly dead daily. I also see reports of injuries. When people talk about their injury. They are banned and censored. Is this not something bigger than what we see on the surface?

Mainstream media – of course - says something different. From my perspective. They never give the truth. We can see this when they say. The vaccine isn't harming people. Nor is it killing them either. Have you seen the science yourself? If you haven't. You need to dig through the 11 different Vaers system.

Okay, so the people are getting sick. We know this because of the death rates going up. That doesn't mean they're sick from this thing called Covid-19 in the way that the mass media is portraying it. I believe they knew long before development what they were doing long before any of this transpired and the evidence to why is already out the bag. I'd felt that way long before any of these whistleblowers came out! So, when they came out. I felt vindicated. It's clear to me. David Martin told us. They were doing experiments on the people in the 90s.

Wasn't this around the time that Fritz and Naghl's work on photobiology was produced? Tell me that's not weird.

Why keep it so secretive unless there are bigger connotations?

Well, remember I mentioned the Spanish flu coming through and wiping out a lot of people?

Haemophilus influenzae just so happens to be noted as “the first bacterial genome to be sequenced.” ([Stanford](#)) (((WAS THIS RELEASED JUST AFTER THE SPANISH FLU? WHEN WAS THIS STUDY CONDUCTED?))

I brought this up earlier and didn't expound in it. So, let's talk about how thirty-one years after the electrical grid began being laid out the first Spanish flu case at **Fort Riley in Kansas** was recorded. (Purple Death) Conspiracy theorists claim the Spanish flu was caused by electricity. **Reuters**, who is an 'everything' news column, published something back in 2020, saying. Facebook posts claim the Spanish flu was from electricity, not a virus, and that simply isn't true. (Reuters) Reuters also appears to be a by-product of one of the media outlets owned by **Thomas Reuters Corporation**. The largest shareholders of Thomas Reuters are **Fidelity Investments** then **Manulife Investment** is the second largest. These are all listed in the cipher.

As I said earlier, when you look at the history regarding electricity it reflects an “improved quality of life.” However, I don't believe that to be true now either, because of what Don showed me, and my studies around that show this to be more of a narrative and not the truth.

A Reuters journalist will tell us,

*“There is no link between the Spanish flu pandemic and the increased use of electricity as a power source. Electricity does not produce **ionizing radiation**, which can **remove electrons** from atoms and molecules ([here](#)).”*

It would be nice if I could include the studies on the health of people around the areas where the electric grid was installed. The Lord God willing, I will do something on it soon. However, for now, some things you're going to need to study on your own. I'm one person on a short amount of time. ((this book shouldn't have taken this long)) I would put money on it though. The health of the people does not accurately reflect an improved quality of life; like the journals say they do. Instead, I would say, the true history reflects segregation and the electrical grid do play fundamental roles in why people got sick with the Spanish flu.

The **NIH PMC PubMed Central** has a medical journal titled “Destroyer and Teacher.” The journal says,

“the Spanish flu arrived in the United States at the time when new forms of mass transportation, mass media, mass consumption, and mass warfare had vastly expanded the public places.”

There were a few interesting tidbits that came to mind when I read this.

1. Public health officials came out asking the public to wear masks and limit going out into the public, because of CV19, just like they did with the Spanish flu. Well, at least that's what the journal says. If this were true. It appears to be a repeat model. I'd also like to note. This has badly weakened our economy. People who are making 80k a year are unable to afford all of their meals anymore. How come? Was this really to protect the people? Don't go out in public, wear a mask wherever you go, and by all means lose your livelihood, because the government knows there's a deadly virus coming to get you! Does that really make any sense? When you look at the history of this pandemic, you can clearly see an issue; if not 10 issues. The first one has to do with the masks. Those masks are said to do more harm than help. Also, why was the narrative shaped around the Spanish flu findings? Public places are making you sick? Is that the truth? Or did they develop this model back in the early 1900s and replicate it?
2. It may be wise to inform you. Simultaneously, microwave towers were going up around the nation, reports of blue/purple lights were on the rise and talk about smart grid smart cities, and **electric cars** became a hot topic. Trump is a big one pushing the smart cities and claiming its for the good of the American people.
3. People also took to doing their work from the comfort of their homes.

It wouldn't seem too irrational to ask. Why are medical journals publishing works that say, crowded places make you sick and chemists like Joe Imbriano are saying, that's not true!? How would you or I know who is telling the truth? Have you studied this stuff? Joe Imbriano predicted a virus would come in and people would be forced to take a vaccine long before the pandemic based on the microwave towers projected to go up. How did he know that? Do you think people couldn't/wouldn't be lying about history?

I can hear the naysayers now. No way! A vast amount of people would not be keeping silent if electricity were making us sick! I can hear them now. Burn

her at the stake for asking! However, if you are inquisitive – like I am – you'd have to investigate it. What is/was Joe saying? What did the other professionals say? You'd find out, the people who speak about these topics are silenced. The people in power don't want people to hear what these people are saying. Why, if there is nothing to hide? I would know firsthand. This book has been a living nightmare to get out. If you only knew the hell, I went through to produce this writing to you for free. You'd question why the hell I carried forward in it. It doesn't even have all that I originally intended because of the sabotage electronically.

In the H1N1 journal (where it's being compared to the Spanish flu) its documented, "Bacteriologists could never identify the microbial agent of influenza." Could it be because the symptoms of the flu are the same symptoms of oxygen depletion in the blood from electricity? The fact that this question hasn't been asked and researched from that time up until now is strange. That's alarming in and of itself. Look around, there are smart phone's everywhere and 5g towers aren't suffering a shortness. Ever since the towers were installed I've had 3 neighbors come up with cancer. They are all in a perpendicular line from a new tower placed right up the street. One man, I helped for a short time, died quickly.

It's so sad. The other guy lost his eye and he is extremely skinny (just like Gary was just before he passed away). Here is a reason to keep more secrets.

[In a published work written by](#) John C Carlton, Dr. Robert Malone - who is the inventor of the mRNA platform - is said to have revealed. "Moderna was essentially founded by DARPA." If we were to study that further. One could find publications telling everyone about grants in the millions. And these were what built the vaccine program!" Moderna is documented as refusing "to disclose DARPA awards in the patent applications filed for the new vaccine technology." Is it possible that John is reaching when he says, "**DARPA is behind the mRNA spike protein experiment, with help from the NIH**"? Heck, even the DAVID Martin guy didn't mention this factor. So there must be where the secret lies to continue forward no one can know...

[NIH has received almost 4.9 Billion to date to fund research on diagnostic tests, treatments, and vaccines. More than 940 million came from the CARES Act.](#)

In [September of 2011](#), NIH, DARPA and [FDA](#) collaborated "to develop cutting-edge technologies to predict drug safety."

President Obama announced that these three agencies would “develop a chip to screen for safe and effective drugs far more swiftly and efficiently than current methods, and before they are assessed in humans.” The chip will be loaded with specific cell types that reflect human biology. It will be designed to allow multiple different readouts that can indicate whether a particular compound is likely to be safe or toxic for humans.

DARPA and NIH will run separate and independent programs, but “they will work closely to ensure maximum benefit and efficiencies.” In that publicized announcement, a man by the name of Collins said, “We know the development *pipeline has bottlenecks* in it, and everyone would benefit from fixing them. What we need are entirely novel approaches to **translational science**, to take full advantage of the deluge of new **biomedical discoveries** that have been made in recent years.”

NIH is the primary federal agency to conduct medical research. They investigate causes and treatments for common and rare diseases.

The United States government planned to implement this type of technology (mRNA) way prior to this life changing situation.

In 2015, three groups of researchers received support from the NIH to improve artificial limb technology. The awards came from DARPA which are part of **Hand Proprioception** and **Touch Interfaces (HAPTIX)** which aimed to enhance neural prosthetics in corroboration with one another.

[NIH's news](#) quoted Roderic Pettigrew, Ph.D., M. D., director of the **National Institute of Biomedical Imaging and Bioengineering (NIBIB)**, an NIH **institute** staff member that supported the research, as saying. “This is a wonderful example of how NIH’s investment in the development of novel biomedical technologies opens up a range of possibilities for treating different medical conditions. We are thrilled to see this technology move forward with new and impactful applications.”

NIH research was said to be contributing to the following HAPTIX efforts:

- Implantable **Myoelectric Recording array** for control of a prosthetic. The goal was to develop a device that’s convenient for patients to use and will create a more natural feeling by implanting a wireless device directly into the muscle.

- Multisite, **Intrafascicular Stimulation** for Stance; A tiny device can be implanted into the peripheral nerves and communicate with nerve fibers and control movement of the muscle.
- Enhancing **Neuroprosthesis** Performance with Nerve Cuff Electrodes; Patients with spinal cord injuries will get an implant, develop, and test high-density electrode nerve cuffs.

They have developed chips to implant in people that will allow them to move their arms better in about the same timeframe in which they were laying the groundwork for the mRNA development. Do you think this was by design or just another coincidence? Also, my kids dad lost his arm in a car accident back in 93 or 94 and he was offered to get a prosthetic arm that would help him move better. They claimed he would be able to move his arm just by thinking about the movement cause the prosthetic arm would be connected to his nerve endings. So, they've had this around for quite awhile. They just implemented the subatomic aspect of it first. That way people wouldn't grow concerned and start fighting against it.

They're trying to say that they just began understanding atomic structures and quantum theory around 1922 when Bohr was awarded the Nobel Prize to develop a timeline for when these things were thought out and understood as if it is when they were developed. Yet, that narrative doesn't line up. Do the math yourself. They had to have known what they were doing with the electrical lines and magnetics that would've been put in place by the time NASA claimed to go to the moon!

If we follow what the narrative says we will believe that they developed schools of thought in the year 500-401 BC only to abandon the matter in the 1900s. This sounds lunatic. I chuckle thinking humanity is clueless because no one really sits down and puts modern day physics and theology or philosophy together. Yet, they're like a hand and a glove.

The rulers of this world identified matter before Christ! They began playing with and manipulating it long before the 1900s. So, why are there so many people who don't know the truth behind it? By taking matter, developing schools around the nature of it, they were capable of breaking down a large goal into smaller goals (and then them into even smaller goals), which allowed them to achieve the main goal by segmenting every market!

It is a brilliant model.

- Segmentation; The idea of segmentation entered the United States marketing thought in the 50s with the work of Smith and of the group

around Wroe Anderson (Smith 1978) with the German book trade. By the 70s it was a major research issue in academic marketing. (Acrwebsite.org)

- Compartmentalizing, is a word that comes from the noun compartment, it is found in information security, it originates from the old French compartiment, "part partitioned off," from the late latin compartiri, meaning "to divide." (Wiki, Compartmentalizing)

Can't you see it?

They made their systems usable to take pictures, then to play music, then to transmit messages long distance via phones and they commercialized it piece by piece while they brought in rules and regulations to protect their own arses.

I couldn't help but think, it's almost as if they purposely strayed away from the research. Don says, that's exactly what they did. In fact, there's a line item that says "**assassinations**" and "**hitmen**." It appears that Don believes they killed anyone who spoke against it and could have an influence, or they bought them. So, if you ever wonder why anyone goes along with this, now you know. Doctors are either scared to stand up and speak out, or they simply don't care about humanity. There are plenty of holistic doctors who have ended up murdered and so have pharmaceutical whistleblowers too. Like Brandy Vaughn (who I mentioned earlier), everyone in the medical profession should know her story. She was an admirable and brave lady. I sure hope she knew Jesus as her Lord and Savior.

You should have noticed the higher up agencies **overseeing** anyone who is involved in that market are also embedded into the character names. What if they were ensuring the truth of it all doesn't dominate the market? What if conspiracy theorists were right? Is it possible a totalitarian power took over every market and in the highest positions?

Listen, even social media is banning anyone who claims anything different than what the narrative says - regarding the Spanish flu and Covid. Then they're telling you and I that it's misinformation that could harm lives. How come they don't let the science speak for itself and let the people decide? Make that make sense.

On another important note. This means finding the truth isn't as easy as one would think. So, unless you are hungo on the truth one could easily get hung up in the lie. The other important thing here is. It seems **exploitation** of a system was the purpose for building any and all systems in the first place. Otherwise, **system exploitation** wouldn't be embedded into the cipher alongside all this other stuff. Even though we have regulators and people who are supposed to be going to bat for the health of our bodies, **that doesn't mean they are**. Friends, they are banking - big bucks - on our ignorance.

Do you go out an measure this stuff yourself? Does your family? What makes you trust these people to always be telling the truth? Have you not ever heard of corruption in government? Has it not been getting worse in the states?

Arpansa - Australian Radiation Protection and Nuclear Safety Agency - has a published work telling us what their guidelines are for extremely low frequency and magnetic fields: They say the ELF magnetic and electric fields are generated and transmitted via the electronics in our homes, power lines, and places around us. So, this (the sites appropriated to handle this stuff) isn't where the information is hidden. Public awareness of this exists. It's the science around it that seems to have a problem with telling the truth, and as I said previously, the lack of evidence should serve as evidence. You should notice that ELF magnetic and electric fields are generated and transmitted via electronics in our homes. They're also able to come through power lines that are around us everywhere.

Unfortunately, if you are an American, you have very little people fighting to give you information on this stuff. Well, let me rephrase this because they are fighting, fighting to keep us inundated with a boatload of lies. If we have no concern about these things, why aren't they talking about it more? Furthermore, why do they censor anyone who does? And even more so, why do they do all kinds of papers refuting what they call conspiracy theorists say? If the ones who tell us - this stuff harms us - aren't telling the truth. Why spend so much time, resources, and energy fighting them to say otherwise? Wouldn't the science on it back it up?

It seems to me the primal factor for the Spanish flu was the electrical grid. People didn't die from some virus. They died from the grid making them sick! RADIATION> Like we are currently experiencing.

Let me stress this one more time (it literally is that important to me and all of this). Don's freaking directions wouldn't allow me to let it go. I had to search deeper to see if I was blindly believing that all the rules and

regulations were put in place to keep me safe. I had to keep digging to see why all these key terms (that are related in that one wouldn't exist without the other) embedded into strange character names that came out of a book claiming to be a "secret vault." How is that even possible? So, what really is the connection and why are they hidden behind character names? And on a really important note. Why aren't the rulers of this world just coming out and saying what the heck their goals are? Why are they so hidden from the American people?

If we talk about this stuff online it's almost as if people are paid to come out and combat it. Could that be the case? Yes! I know it is.

Is it possible the elite have been using electromagnetics to reduce the population? At the same time they're setting the stage for their final showdown to gain power of the entire world using medical tyranny? Let's say this was the case when the Spanish flu came out. The elite could've easily set up other companies that they later brought down because they were "causing issues" in the industry to bring about regulatory agencies, laws, and regulations that would later prove to be beneficial for the totalitarian powers they wanted in place during the last phase of their plan. If they were capable of being able to come in and say, "this industry needs regulated," when no laws or regulations existed for it prior to this because of high bills, illness, or pollution (this way, they could establish the agencies they would need in order to force their final phase of the plan), which allowed them to put those laws/regulations into place in the first place, that would fit the "cause a problem to become the solution" model that seems to be what conspiracy theorists claim has happened. Those laws and regulations would then be used to monitor the science and direct the narrative. Through these laws and regulations, they would be able to initiate their final New World Order push. In turn, this allowed them to control who was or was not in the industry. I can only assume there has had to have been men out here who have died uncovering this.

Gosh darn it, it's brilliant! BRAVO to the elite family bloodlines who took all these generations to carry that out.

By analyzing all current situations up against all the past ones - that's placed in the cipher - I think we can see those things not otherwise evident, which is why I plucked away at this information in the manner that you've been seeing. I mean, I learned it that way anyhow.

✚ Why else would things like, the **Telecommunications Reform Act of 1996**, be inside the cipher? If it wasn't important. Why is it included

with the rest of these key terms? The reform act is a major reform of the United States communications law that aimed to let anyone enter any communications business and give the American public greater access to the federal government's records. They created the law so as to "let any communications business compete in any market against any other." It may not be widely known. I suggest doing a study on the totalitarian power in this industry, which is why I believe this act was originally created. I can't wrap my mind around another reason this would be in the cipher next to all these other terms.

Telecommunications resellers association (TIA) The Telecommunications Industry Association (TIA) brings together communities of interest across -- Technology, **Government Affairs**, Standards, and Business Performance -- to enable high-speed networks and accelerate next-generation Information and **Communications Technology (ICT) innovation**. They are the global voice for trade and investments, have over 400 big named companies globally, and they foster the idea of community. They are focused on built-in security and following regulations globally.

Cyber security is on the rise so they need a way to ensure that people feel protected on the internet. Without these regulations in place the people will feel to open to being hacked.

Sounds so good and honest.

✚ *THEY ARE LEADING THE SMART BUILDING SMART CITIES – If you don't know about this. GET EDUCATED – You will know the most important aspects of this before you leave this book alone. But some things you must study yourselves by visiting their websites and reading all there is out here on it. Knowledge is power my friends. Besides, once you know the truth; you're set free. And when you're free, your free indeed!*

✚ *((NEW WHITE PAPER [AVAILABLE FOR DOWNLOAD](#)))*

Telecommunications regulatory Authority they're the primary authority for communications law, regulation, and technological innovations. Interesting how they went from rotary dial telephones to wireless communications within my lifetime. I didn't imagine it growing exponentially (the way it has) in my lifetime.

Look into the "**smart cities**" idea. They want the common people to own nothing and be trackable via an RFID implant. This is bible prophecy unfolding.

Line item lists that have a role:

- [National Environmental Health Association](#) has a mission that is centered around "building, sustain, and empower an effective environmental health workforce. They produce a **journal of Environmental Health** that's published 10 times per year that keeps readers updated on current issues and more.
- National Health collaborative
- Neighborhood Emergency help center
- New England Home care
- Modern healthcare
- [National Committee for quality assurance](#)
- [Nightingale health](#)

If all the healthcare is government or privately owned and operated by corporations in direct relationship to the Corporation of America what would the ramifications of such be? What about if the world leaders have a depopulation plan put in place and they own and operate every aspect of the system would all this stuff compiled mean something alarming then?

This system of communication has blossomed into a world of fast electronics, digital banking, and healthcare that's completely trackable by governments worldwide. Why would anyone of us want to live as slaves to elite people? Have the people not heard the horror stories? This goes to show why the totalitarian power needed to exist within the telecommunications industry. No way you'd give up your liberties so easily! Yet, in many ways. You are. Sadly, most of you don't even realize it.

You can call a **psych doctor** or get you a **tele-dentists** in light-speed. What you need is nothing more than a click away, and they're setting this in place now, so that you accept artificial intelligence taking over. They're using it to say you can streamline your business, make more sales, and make life generally easier to leave time for more play or family gatherings.

Is it possible that artificial intelligence is nothing more than an ancient idea, an ancient tool, and a way to control all of humanity?

Causing a problem to become the solution has very powerful connotations. At the same time, you can put out a bunch of amazing games, technological weapons, automobiles, planes, or bionic man and woman toys, and keep people captivated for years before they realize there is a problem. If one wanted to gain the lead in controlling the information around any topic specific corporate goals can be outlined and executed years prior. Simulations would help show any outcome using real world facts and scenarios for industry leaders.

Have you taken the time to listen to any of the chats from the **Trilateral Commission**, the W.H.O, or **the United Nations**? What about the **G20 Summit** and the **technology panels**? If not, you're missing a lot of something.

I have to say Artificial intelligence is one of the great powers of the eye at the top of the pyramid on the dollar bill, because it's antichrist and a major powering source for the dragon to rule the world taking over every human genome the world has. Now you already heard me say that you and your loved ones are affected by all of this. Some of you may be thinking that is impossible. Listen, I don't say anything I can't prove, and if I'm speculating - because I've not found the truth - yet, I will tell you that. I won't pretend like I have something and be lying.

Don shows **ionospheric mapping radar systems**, and an **aerial system** is being used to biologically poison the people using **the Royal Airforce, Australian Air Force, Chinese Communist Party**, and the rest of those guys - which is one of the main reasons they made an **Open-air treaty** among the nations. They're doing all this under a guise of **climate change**. Poisoning us via the food, air, and water. Then blaming mother nature for the evil they are carrying out.

They tell us they need to monitor the air/wind/and whatever else you can think of (like terrorists attack threats) when they're monitoring the people and working under guises to do a total take over of the human genome under a guise.

There is an **aerial platform** with an **encrypted grid** embedded into all the character names. Part of it is for **space exploration** but the other part is for using **mouse units of biological toxicity** calculated by residential consensus. The **stratosphere, troposphere, mesosphere**, and the **ionosphere**, and **stratospheric aerosol injectors** are embedded into the character names.

There are also lists of patented viruses, and the grid they follow to spray them was allocated by region and dispersed on specified days of the week. These line items show us it's a system of systems that prove to be interwoven into **aerospace**. **Aerospace studies** and **applied science** would not only apply to the **aerial network** in terms of **commercial travel**, but it would apply to **top secret mission status** (say for instance, **missile systems** and **Military Science**) or the spotting of **UFO's** and the launching of **rockets**. I wasn't joking when I told you this cipher was packed full of information. And it's got **top secret** information that some world government leaders (probably) don't have.

They're the ones creating the storms. If they aren't how come things like intense hurricane is embedded into a name with locations that you can look up and find they've been hit with an intense CAT5?

Let's see more key terms related to this:

Radars are used in **surveillance measures**, which falls under defense, and are subject to regulations, however they work under umbrella terms, corporate names, subsidiaries, and institutions. They would also be used to fly these missions. Here are a few key terms that's related.

- Satellite Transmission
- Straight Tip (AT&T fiber optic connector)
- Sequential Timer (electronics)
- Slovenske Telekomunikacie (Slovak: Slovak Telecom)
- STMicroelectronics, Inc.
- Spherical Torus
- Simulation Testing
- Spherical Tokamak
- Surveillance Test
- Statistical Tolerance
- Document Release Order Technology, Space, Cosmos
- Design Requirements Overview Military, Army, War
- Aeronaves Del Noreste Airline, Organizations, ICAO Airline Code
- Destrutive Read-Out Technology, Telecom, Telecommunications

These line items are directly from St. Nicholas. ST is the derived acronym. You would think that you're critical thinking skills have began to wonder. How the heck did all these terms get put together in the character names? Are you going to tell me it's a coincidence? My explanation – no matter how remedial it is – holds NO WEIGHT on the fact that these key terms are together in a cipher created because of a book called the Marvelous Underground Journey of Baron Trump.

"**Spherical trigonometry** is the branch of spherical geometry that deals with the metrical relationships between the sides and angles of spherical triangles, traditionally expressed using trigonometric functions. On the sphere, geodesics are great circles. Spherical trigonometry is of great importance for calculations in astronomy, geodesy, and navigation." ([WIKI](#)) ([PDF UCLA](#))

Destructive Read Out Technology, Computing, Memory when data is read from the memory the stored data is taken out from memory and in the process the data is erased in the source. Because the data is lost, the process of that is referred to as destructive readout. – this is a big topic in the software industry. People who know the companies that will provide the software that's coming from a Corp (like INTEL CORP) - that have a trading symbol - would do well to invest early. ([Google Patent, US720672B2](#)) Can you envision how nefarious that knowledge is? Think about all the homeless.

These evil people!! PURE EVIL They even control the **stock exchange** and telegraph what will go up and what will go down.

Electromagnetics and Space Environment encompasses two technical fields: one concerned with issues of **electromagnetic transmission**, reception, propagation and interaction, and another looking at the troublesome effects of the **orbital environment**. ([ESA](#)) The Ancient Greeks used astronomy calculations.

Could the orbital environment be humanities genome?

While the relationship of some of these key terms - one with another - are technical, the relevance of understanding them to get the bigger picture, supersedes the technicalities of knowing the jargon and being able to apply it in its respective field for this writing. I mean, the more you study each one of these key terms and the relationship between these agencies a **top-secret mission status** starts to develop. Unless you've been in this field for quite awhile you aint going to know everything immediately. I could still learn so much more. Much of what I think about could be speculation. The problem is. This still comes together. Is this how philosophers were going to honor the gods? I guess it would make sense seeing as Corinthians 4:4 says the god of this world has blinded people's minds. While other scriptures say that some people would be cursed with a great delusion so that they believed a lie.

What lie?

Could it be the lie of going to outer space? So many people believe this and quite frankly that's being cursed. Hell is a real place despite what some people like to say. I know. I met Satan at 14 four times in the spirit. There's a video on it if you want to know more.

Could agencies have been covering for the elite who are using the RAF, Australian AF, UAF, CCP, and more to poison the world population via the chemicals in aerosol injections, balloons in the atmosphere pumped full of mouse units of biological toxicity, and rockets or drones? I mean, if people are paid really well to fudge on the science are you saying it's not possible to fill the position?

Get this.

Don showed me these things are nerve toxins (there are others which are listed in the key term section). They effect people differently. And they basically mimic a parasite in the form of a nanobot. Guess what? Stew Peters came out with a video talking about the vaccines having a nerve toxin in it. I wrote about that back in 2019 – way before Stew Peters even became a big name.

They're not going to tell you this and that intelligence would be highly protected. So I know that many will claim I'm telling a story. I will tell them, now. Stop lying! You are protecting your daddy the devil and you should really consider your ways! After all, the prophets of old talked about it. And there's a new prophet on the scenes that proves every Word of God to be perfect. A perfection that no man could've made to happen.

I like to say I've got my hands on satans' blueprint to take souls to hell. Can you see how much is lined out in Don's directions? Is this a coincidence that all of this has come out of the character names broken down taken out of that book? I got more information on me than any murdered soul (because of what they knew) out here. We aren't even a quarter of the way through it all!

There's an entire grid. I matched the cloud patterns to the grid that I took out of Don's directions, on the specified day, how the heck is that even possible? I've a video (actually 2) on the geoengineering aspect and you can't deny it. They're using the Universities as a grid line. Those Universities would have aircraft flying over from one to the other leaving lines behind them. Lines of mouse units of biological toxicity. That's why we have big X's in the sky!

If you're a doctor, lawyer, or even a judge you may live in a nicer neighborhood than I do, but you are breathing the same air as me, do you honestly think good doctors get great treatment (because of the favoritism you get from your title) and having access to great products is going to save you from the very things that attack those of us who have nothing? You're fooling yourselves and you don't think properly. Your logical thinking skills are gone. You're in a worse place - than I am - and I have nothing! You can hide

in your dooms day bunkers and I can assure you. Don shows me they have **bunker buster bombs** waiting to blow you up!

How's that for protecting evil?

You can't make this stuff up.

Heck, Don says **chelation therapy** would help people overcome the **biological toxicity** we are encountering. So of course, many would believe that they're in the safe zone. But they couldn't be more wrong!

Anyhow, the **earth's system** isn't as complex as people make it. However, that's neither here nor there. Don's directions are and I'd like to point a bit more out. But I guess that's where future work on this comes in. Till then, we are sticking to the basics. However so, I'd just like you to know as much as possible. For instance, the stratospheric aerosol injectors are related to aerospace. That's some basic stuff to know. The aerospace industry is found in the cipher. You can see that in the cipher that's been made available to you in the name Princess Crystallina would be a good start to see this. What you don't know is. They're using some bad stuff to spray the sky, and the purpose for doing so, has to do with taking you over from the inside out. They tell me - and you - it's to combat climate change. Don says, it's to poison us on top of convert you into a double-downer with no hopes of ever returning home. No people, I'm definitely not joking or trying to make a mockery of the truth. This is the truth!

Key terms related:

- Aerospace studies
- Aerospace corporation
- Aerospace society
- Aeronautical science
- Autonomous system (ATM)
- Air station
- Aerial platform
- Agent society (international society on intelligent agent technologies)
- Academy of Science
- Applied Science
- Associate of Science
- Complex
- Virtual optical network
- Voie on the net

- Off road technology (vehicles)
- Over Roof-Top (electromagnetic wave propagation)

I can't stress enough how the lists here are not comprehensive. They're very limited. I want to build upon them, but the powers that be keep destroying my work and its been made nearly impossible. I've included key terms at the bottom to show all those things that I couldn't in this writing.

Anyhow, I hate being a broken record. But let's keep it real. People are always twisting other people's words and saying something they didn't say. If I make it plain as day now, there will be no "I misunderstood you," on down the road.

Have you seen enough key terms to understand why they've not wanted me to get this out? They've targeted me hard. I've lost a boatload of weight in my attempt. I've suffered weird symptoms. Like my entire head burning as if someone lit a match. I've felt bands of something around my head. I know its frequencies. Maybe something like scaler waves? IDK, all I know is I could learn more too. Yet, I know we are running out of time. This is why I'm pushing this writing out even if it has errors. There's not enough time to have this distributed the way I'd like. Remember, I asked you to please send this to at least one person.

They want me to give up.

I refuse...

I honestly do not care about what the world thinks of me. I care about what Jesus will say when I'm standing in front of Him. There is no possible way I could know all this and hold onto it and not try to share it, to tell the world what I know is the truth. Your share would mean the world to me and it would make all this struggle worth it. Even if you don't think this writing is good. Still share it and let others decide. Okay? Thank you.

It's a fact, light interacts with the DNA. DNA responds to and interacts with the electromagnetic fields that make up this field of light. The DNA, and the health of the body are **very dependent of light** and they knew this back in the 30s. It is also true that DARPA is invested in creating a chip and that's the National Institute for health ministry goal. Now, in 2023, they're spraying the skies with chemicals that spread out like butter across the sky blanketing the sun and the beautiful blue we once saw frequently is now a powdery white - just like the book said it was. How did the author Ingersoll know that all that time ago?

Are you going to try and convince me that he and Trump are now both time travelers? Gee whiz people.

Look friends, they've known for quite a long time – at least since the 60s – that DNA responded to light. And I'm more than sure they used citizens as test subjects without their consent.

I am a victim.

You are a victim now too. Do you have the seal of the Lord thy God, Jesus? Are you on the rock?

Electromagnetic energy is invisible to the naked eye unless it's extremely high and this would cause us to see colors. Now, it depends on the wavelength of that energy, what color we see – if we see any at all. Light says, hey, electromagnetic energy is present. But let's add to that now. Light can interact with our bodies automic structures. You ever go out into the sun and get the feeling of being "charged up?" I always feel energized after I've spent a day in the sun, take a nap afterwards – because it can be draining - but feeling much more refreshed in the following days and this is because, I'm taking in energy from the sun.

It's reported, there are around seven health benefits from the sun. Like, it helps your body maintain **calcium** and prevents **brittle bones**, you get vitamin D to keep you from a deficiency. So... The **sun** is a good source for our bodies to function properly. If you are unhealthy your body won't be able to do these processes on their own. That's where **modern medicine** has its pitch. It is used to find a way to come in to manipulate the sick body to be healthy. The sun is a good source for our bodies to function properly. What if **NASA, Sandia Laboratoris, SETI, John Hopkins, WHO, DOD, DOE, DARPA, Bell systems, IBM, Microsoft**, and all them came together to harness the suns energy, redirect it to a specific targeted research project, to obtain a medical goal of tyranny under the instructions of a totalitarian power?

Isn't this the plot of a lot of strange movies? (hand on face as I shake it back and forth with tears swelling up in my eyes. Tell me you are beginning to see that this stuff isn't on accident?)

Doctors have said that UV damage can take a huge toll on a person's skin and the underlying connecting tissues. You can get wrinkles quickly from too much exposure, or cancer. John Hopkins has a **Sun Safety** publication that says the sun can harm the eyes and cause damage to our **immune systems**. Radiation can also harm the body quickly. I have wrinkles like crazy and they're not even genetic. I don't see how much harm is coming to the people

from the electrical grids they began installing in the late 1800s in any of their work.

Why? The sun didn't bother all the Indians for thousands of years. So, why would the sun be bothering people now? Could the sun harming people be a cover for the **wireless network** they've built and are adding to? The science and the data don't add up. Is it possible the truth is people are being harmed by the electrical grids and doctors are paid to blame the sun?

No way! They wouldn't do that, would they? If they did. Why would they? Make that make sense. Well, go add up all the funds available to these agencies that I've already outlined up until now. That should tell you how many reasons there are. Esau sold his birthright for a bowl of porridge.

I've always found it odd that they wanted us to cover up from the sun because the Indians lived long healthy lives and they were always in the sun. However, certain reports changed over the years and they told us the Indian people weren't healthy at all. Why did that story change? Think about it. The Indians wouldn't have been so dark if they weren't in the sun all the time. They were also a lot healthier and they lived longer lives than we did, and we know this because of all the old Indian remedies - the powers that be are trying to erase from history - tell us. So why does the sun magically harm us? The answers you can find out here are just as stupid as the answers to why we came from Apes and still have apes in the world that aren't turning human. Sadly, if you were to ask the professionals, they would tell you the Indians were sickly people. At some point, I realized that all the times they declared to have made a discovery, was really the moment they were going to bring others into their web of lies, they were building the foundation for their framework that the philosophers broke down many years ago.

You see, the human computer interface that will be tied into the intranet of Bodies (iob) is biblical, not fantasy fiction, Sci-Fi, or something made up by humanity. No, it is in fact, biblical in nature and the implications behind are startling.

Revelations 13:16 And he causes all, both small and great, rich and poor, free and bond, to receive a mark in their right hand, or in their foreheads: 17 And that no man might buy or sell, save he that had the mark, or the name of the beast, or the number of his name.

This mark is known as the RFID in the intelligence and technological community - the Radio Frequency Identification. People all over the world are saying it would never happen while a small handful - such as myself - are

warning of the framework already being in place. There is only one thing in the way.

America

I believe those that say it won't happen are either saying this in ignorance (or they say it because they're helping to advance the enemies' plans - so that it is too late to stop what's happening.)

David Martin told us how they tested their software on the populace in the 90s. The NIH says that they tested it out on mice (or rats) in the 90s. Someone is lying.

A bunch of targeted individuals are victims to this horrible secret. People were the same way. When something foreign comes into the body it must be expelled, which is why we find ourselves sick sometimes. I almost died in 2007 after being sick for a period in time and I now feel as if I have more than enough evidence to determine I was infected with their tech. This is why computers used to act crazy when I went to pay a bill or buy a product. The documents are surely "classified." It doesn't mean I'm lying or reaching. It is a fact. These guys have been working under guises for such a very long time.

My question is.

Could I have been one of them subjects? Actually, it's dumb of me to say that, cause I know darn well that's what they did. This is one of the things God showed me via these directions. It truly explains so very much. Too bad for them that lambs blood is an antivenom to neurotoxins aka snake venom.

Who among all these participatory agencies would have the information on me? I submitted a **FOIA** from the **D.O.D.** They told me they didn't have information they could give me. Does this mean they have information that they can't?

What the hell are they hiding about me, from me? I know it's something. My life itself provides evidence that I'm heavily targeted and they want to finish me off. Unfortunately, for them, I'm covered by the blood of my Lord and Savior Jesus Christ. After all, break-ins to my home began in 1996 and it absolutely was medically related. I have the health records to prove it. I still suffer to this day. But Praise Jesus. He is the Great Physician. I was almost dead. He gave me many more years to live. I know. This is exactly where targeted individuals come into play. My life reflects it, other targeted individuals' lives reflect it, and Don says this is the case.

I can't shake this story. I have to slide it in here real quick. There's this guy that was on TT who was saying his ex-boyfriend performed sorcery on him. He said there were 6 other people involved and they were controlling his hands and mouth. I wonder what happened to him. He was fighting himself in one video for the phone. People was talking all kinds of bad about him. He told us his family told him he better take them videos down. I've not heard out of him in almost a year. Then there is John Guard Music. He is also no longer on TT. He was live every single day. There are a bunch of people coming out as being a crazy psycho who is shooting people up or driving through crowds of people that are under their control.

In my life, there were "ops", operatives, and when I first began to notice them, I realized 'they' stood out from other people cause they would wear things (like black glasses and a hat). They would also all make baseball signals to one another in public. It's strange how people in public places are in such a trance they can't notice them. I thought I was nuts at first. I felt like Neo from the MATRIX. What the heck was going on? I'm so blessed to not have been fully taken over by them. I've been through a nightmare. However, Jesus has to love me. If He didn't I would be dead.

Anyhow,

It is natural to swipe the nose – as if you are wiping it – and pick up the hat and put it back on the head (as if it needed adjustments.) Someone within eye view will do the same thing. Whoever is involved will be doing it. It's natural movements. If you are in the store and see 10 people do it, it may seem strange. However, for the most part. People just think it's an 'odd moment' and chalk that up to 'weird.' Two or even three people in a public place, and you may not even notice. The point I'm getting at is. They're all around us.

They are consistently targeting people. Torturing them with technology far more advanced than what they lead the people to believe. And this is what they are doing to every human being on the face of the earth under the guise of climate change, medical tyranny, and sustainable development. I'm not reaching. You go on and research what I say. When you are done with this. Don't stop until you know that you know the truth.

A young lady - who was an air force soldier – came out telling us how there were high levels of **barium, strontium, and aluminum** found to be being sprayed onto the populace. She also tells us how her whistleblowing has earned her a spot on the long list of targeted individuals. Her whistleblowing testimony tells us how nefarious some people are and what lengths they will go through to keep a secret. You must imagine, power and influential people

would go to any extreme to protect this intelligence that I'm trying like hell to get to you for free. They know (and so do I) they're sending rockets up with poisonous substances to hit the dome and fall back down onto the people.

No one is questioning them guys about the rockets, are they? But people sure are coming out saying. We are finding all these metals, and we have no idea where they're coming from!! No one is asking anyone about the substances they put into them rockets either. But people are going to the doctor with nerve damage, kidney and liver issues, and heart problems on top of respiratory issues blamed on Cv19! Look at the list of chemical names or compounds (whatever they're called) at the bottom of this, in the resource section and look up the sales of those things. The increase is astronomical.

But, let me move on.

In an article recently published. They said a "shocking **regulatory gap** exists" in relationship to the frequencies (that are causing people to argue over science with regulators.) This regulatory gap they mention is for a very good reason. Anyhow, not one federal agency has a mandate to assess the harmful effects of wireless radiation from cell towers, nor is any monitoring regularly conducted of the levels of wireless radiation in our environment from the several hundred thousand operating towers in the U.S."

Citizens are actually going near towers and getting readings that are 10-70 times over the regulated guidelines. How long would it take for anyone to come out and say anything?

The **US EPA** has a [Federal Guidance for Radiation Protection](#) last updated in the late 80s. Per EPA Website:

"In 1970, Congress gave EPA the responsibility for establishing generally applicable standards for the protection of human health and the environment from radioactive materials. EPA standards set protective limits on the radioactivity in soil, water and air that comes from human use of radioactive elements such as uranium. These radioactive elements emit ionizing radiation, which can damage living tissue and cause cancer. Learn the radiation basics. EPA does not regulate the non-ionizing radiation that is emitted by electrical devices such as cell phones. In 1970, Congress gave EPA the responsibility for establishing generally applicable standards for the protection of human health and the environment from radioactive materials. EPA standards set protective limits on the radioactivity in soil, water and air that comes

from human use of radioactive elements such as uranium. These radioactive elements emit ionizing radiation, which can damage living tissue and cause cancer.

“EPA does not regulate the non-ionizing radiation that is emitted by electrical devices such as cell phones.”

Why is that? Isn't the **FERC, EPA, or the FCC** supposed to concern themselves with these sorts of things? Might I add that nano-cells or nanoparticles are made from minerals. And when you have a bunch of minerals floating around your blood stream radiation probably affects you much more differently. Heck, the changes in my body are astounding. So, people simple aren't concerning themselves with this market. Those who are say. “There's no reason.” Should we just believe that because the FCC said so or because Congress backs that up? Well, who would care if the people involved in these markets are owned by the people trying to control the narrative?

Green approaches for **metal nanoparticle synthesis (MNPs)** are made strictly by metals precursors and can be synthesized using chemical, physical, or biological methods (Ray, 2018) They use numbers of different metals like **silver** and **gold NP** (Bhatia, 2016) MNPs have a distinct **opto-electrical** property. In the visible region of the UV-Vis spectrum you find **Cu** and **Au** have good **optical phenomena** (Khan, See, &Khan, 2017) Metal Nanoparticles (MPNs) are used for **optical applications**, in **biomolecule sensing** and imaging, and for **ecological and bioanalytical applications** (Murphy et al., 2005) MPNs can be organized into 1D, 2D, and 3D structures, which have been used in **nanodevices**. (Rao, Kulkarni, Thomas, & Edwards, 2000) Metal nanoparticles have been used in space and **microarray**, **chemical** and **biomolecule sensors**, and **single-electron devices** (Fedlheim & Foss, 2001) An example given in the linked science direct article tells us that **Silver (Ag)** is used as a nanoparticle and has been “widely utilized as antimicrobial agents, ointments, and lotions. He also mentioned how it's been used for wastewater treatment and in textile industries.” ([Pooja, 2021](#))

The **National Geographic Society** also has a publication on nanotechnology, which says, “Nanotechnology is the study and manipulation of individual atoms and molecules. Nanotechnology is the understanding and control of materials on the molecular, atomic, or even subatomic scale.” ([NGO, Nano](#)) How nice of the NGO to give us a little information about it. Wonder why they didn't tell people that the **green nano initiative** has nanoparticles in the operations?

According to Don, nanoparticles are being sprayed on the world's population and they're being put into the food supply, plus used in **wastewater treatment** operations. How come **science direct** mentions the MNPs have "been demonstrated" in wastewater? As you can see, thus far, from the different short lists above. The line items vary. There are technical sides that would be related to office work or corporate America. For instance, the different waves are related to space weather, DNA resonance, and healing. Then, you can find laws and legislation, rules, regulations embedded into this thing. It's so packed full of information - you may think I'm making it up - but the line items being yellow highlighted and bolded should really go to show; this is one hell of an elaborate plan that wouldn't have been accomplished easy. It took time, dedication, and a heck of a lot of money, on top of generations to accomplish. Who else would have the power to create all these business terms, goals, applications, software systems and processes, law, rules, and regulations, businesses, organizations, public offices, and more into character names of a book? Who decided who would name what and how it work together in the end to telegraph the plans of it globally? That sounds like an intelligence that we simply do not see here on earth. Is that why there's all kinds of movies about mad scientists? We haven't even covered a quarter of the information found in the names.

The **Parks Act** is one of many congressional proposals that's set the stage for increasing ambient exposures to wireless radiation, "an agent that the government's own studies have found causes cancer and DNA damage in animals."

What a perfect time for all this stuff to come out into the public eye? Yay!
Someone is coming to save us all!

Or are they?

You should hear the many stories of brain cancer in humans. A whole sophomore grade of college students died from a tower that was just outside of their dorm. But they hid that story. So me telling it is fruitless to a people walking blindly. The **U.S. Department of Health** and **Human Services National Toxicology Program** researched cell phone radio frequency radiation in mice and rats. The findings were disturbing.

The NTP studies found (900 MHz) used by cell phones was associated with

- Tumors in the hearts of male rats
- Tumors in the brains of male rats
- Tumors in the adrenal glands of male rats

- The NTP scientists also found that RFR exposure was associated with an increase in DNA damage.

First off, we must emphasize 'DNA damage...' If cellular use could cause cellular damage in rats. What could it do to people who are full of graphene? They said, "it was unclear if tumors observed in the studies were caused by exposure to RFR in female rats (900MHz) and male and female mice (1900MHz). **NIEHS** scientists in the Division of **Translational Toxicology** supports the **National Toxicology Program** and they are working on understanding the reports of RFR on the rodents. These people are supposed to be extremely smart. What is there to not understand? Maybe they're thinking about how big all this shit is and they don't know if they want to tell the truth? That sounds more feasible to me.

Why are they not looking into its effects on humans? Seriously, think about this question. Here, let me give you a reason to do so.

Neuroblastoma Cell is a line item found in the names with NA acronyms. "[Neuroblastoma is a highly malignant tumor in children. A cancer](#) that develops from immature nerve cells found in several areas of the body. Neuroblastoma most commonly arises in and around the **adrenal glands**, which have similar origins to nerve cells and sit atop the **kidneys**. However, neuroblastoma can also develop in other areas of the abdomen and in the chest, neck and near the spine, where groups of nerve cells exist. Neuroblastoma most commonly affects children age 5 or younger, though it may rarely occur in older children."

Because Cancer has been on the rise. Scientists have been working feverishly to eradicate it (even though Dr. Sebi proved it can be healed already. His work would essentially end the need for pharmaceutical companies. They can't make money that way). These - hard working - scientists have found [Neuroblastoma has the highest rates of regression](#). With lots of investments from **GlaxoSmithKline** and **Merk** (for a couple of patents on methods that will help them identify neuroblastomas) Dr.'s are working hard to eliminate this cancer that is said to [account for approximately 15% of all pediatric fatalities from cancer](#).

Let's quickly look at the market size of neuroblastoma.

The major companies in the global pediatric neuroblastoma market report include **United Therapeutics Corporation**, **APEIRON Biologics AG**, Baxter, CELLECTAR BIOSCIENCES INC., PROVECTUS BIOPHARMACEUTICALS, INC.,

Pfizer Inc., MacroGenics, Inc., **Bayer AG**, Clarity Pharmaceuticals Ltd, **Eli Lilly**, PersonGen BioTherapeutics (Suzhou) Co, and around 24 other companies other key players you can find in this [Delveinsight pipeline insight 2023 report](#).

New Drugs are often coming down the pipeline from the ones I just mentioned above. These drugs aren't limited to these:

- **Racotumomab**
- 67Cu MeCOSar Octreotate
- LY3295668
- SACT 1
- TAA06

The Delveinsights| pipeline insight 2023 report goes into detail. When you look at the details about the drugs, you find a classification of how they're administered. Just below that. You see a section with the heading of.

MOLECULE TYPE.

DARPA created 1600 molecules. Would they find some benefit if they could implement this and show people are doing better? Is there other reasons and possibilities? Mind you, the goals of the current research efforts into the effects of RFR (**radiofrequency radiation**) is a component of electromagnetic energy from the frequency range of 3 khz-300 GHz. These studies are rodent studies to:

- Determine the impact of RFR exposure on behavior and stress, including the real-time assessment of activity and response to system-generated noise and RFR signals.
- Conduct physiological monitoring including evaluation of heart rate.
- Investigate whether RFR induces heating.
- And further evaluate whether RFR exposure causes DNA damage.

(Quoted from the ntp.niehs.nih.gov) publication.

Records indicate. The GSM signal operates at 900mhz, 1800 mHz and 2250Mhz can cause harm to human tissue. This means that, humans don't have to worry because it isn't high enough.

But is that true?

Did you know that some watches can take your blood oxygen level, count your A1C, and monitor your heart rate? What if they're doing it on you through an app (like google or the meta verse) that you're plugged into. How would you know, if it was a big secret they were keeping?

Have you ever heard the story of Monsanto paying off scientists to lie about Agent Orange in the 70s? You should check that out. Tell me they can't do that again. Don says they can, they have been, and the bible says they will until HE returns to cleanse this place.

(2008 Oct., PMID: PMC2569116 | PMID: 18941554, Cancer: Strong signal for Cell phone effects)

There are 3 billion cell phone users in the world and more than 260 million are in the UNITED STATES. 46% of that number is kids aged 8-12. **Nielson Mobile** released Sept. 10, 2008, pub. that says, the most recent attempt to view data on **epidemiologic evidence** for an increased risk of **brain tumors** related to the use of cell phones is indicative of an increased risk of tumors. May 2008, issue of the **International Journal of Oncology** published they found that there is a significant association between long-term cell phone use and brain tumors. It is quoted, "We found that cell phone use is linked to gliomas, which is malignant brain tumors, and **acoustic neuromas**, which is benign tumors of the brain" and this stuff isn't showing up till around a decade after the individual began using the cell phone.

Process that. Study that in more detail when you're done reading this. I've said numerous times there is a boatload of information and the only way to obtain the truth of it all is to look deeply into the key terms presented in this writing.

Did NASA really go to the moon? Did the challenger team really die? How did all of them have twins with the same names who are still living today? Well, one guy died. Heck, there may not be any time left to find the answers (the way the internet is being scrubbed of the truth.) Anyhow, research everything you are told. Do not just believe because they're the popular source either. I can assure you. Don says medical and technological journals are fraudulently inserted.

Heck, everything we have covered thus far intertwines one with the other. Those who have been in control have worked feverishly to keep everything so compartmentalized that people would never see those important issues as they are unfolding. Those who do see it are highly paid. They could even be bribed, coerced, or be happy to go along with it.

People are told **NASA's launch services program (LSP)** is responsible for launching rockets that deliver spacecraft to **observe the earth**, visit other planets and explore the Universe. So, it would not ever cross anyone's mind. These rockets are sending up poisonous stuff into the stratosphere, ionosphere, and mesosphere that allow them to control the weather and drop mouse units of biological toxicity onto the people.

Then they use their uncanny ability to manipulate the digital systems by going into backdoors of the software systems they've managed to get distributed into the government and private sectors. Who else do you think is training people to accomplish the cyber-terrorist attacks that are happening at such an unprecedented rate these days? Do you really just blame China? Like, seriously people snap out of your daze for crying out loud. I so happen to know they can get into the medical systems software systems to obtain the results of their **biowarfare**, because I've dealt with the crap! I earn no kind of living and I've freaking been unable to claim disability when I have 4 qualifying disabilities. How do they expect me to live? Ah, dumb question. They don't care. Every time someone gets sick and goes to the hospital it is recorded in a digital file. Blood work is also recorded in a **digital file**. NASA operations are top secret or highly sensitive.

Their role is extremely important, and I believe I know why now.

Related Key terms:

- Biomedical and environmental sciences (Est. 1988; journal)
- Behavioral Science
- Bioengineering and environmental systems
- Biomedical engineering systems
- Biomedical engineering society

Whenever NASA uses the electric fields created by differences in voltage, there has to be some kind of "ripple" effect that would reverberate through our atmosphere. I mean to say. That is – if – what they told the world were true. If they were really sending signals out to control a rover spacecraft on the moon, those signals used to beam would have to also be sent through the ground stations, and their very own journals say "on a flat non-rotating disc." From this statement alone we should know that their systems are most definitely affecting the citizens of the world.

But, since I'm not a scientist and I've been outcasted from my own community you couldn't believe that, now could you?

So, let their work talk to your hearts and touch one of your logical thinking cap **neurons**.

If the United States were to have a totalitarianism, what kind of totalitarianism would it be?" Margret Atwood in the book, **The Handmaids Tail**. You can't tell me she didn't have some knowledge of the future state of America. Otherwise, her book wouldn't seem eerily familiar to modern day situations, which is why it was a widely sought after book around the 2016 presidential election. ([Sojo.net](#)) My point here is to show that a totalitarian regime was showing significance back in the early 1900s. People had to have some idea of the power of the elite groups who sought to rule the world. What that may have been isn't something I understand. In fact, if Don didn't put it together I'd not had any idea this stuff connected.

On another very relative and most important note. One must understand that there are spiritual principalities in place working feverishly to take as many souls to hell as possible. 2 Corinthians 4:4 says, the god of this world has blinded the eyes of those who don't believe. This tells us. There is a god that isn't into letting people see that he exists. He doesn't want them to have the truth. Gee whiz there shouldn't be this many liars among our people. That's probably one of the only reasons that I find all this hard to believe myself.

NIMH, is a part of the National Institutes of Health (NIH). They fund and conduct research to help answer important scientific questions about mental illness. They claim to use the research to help find good treatments for people. **NIMH Division of Neuroscience and Basic behavioral Science** (DNBBS; provides support for research programs in the areas of **basic neuroscience**, technology development, resource development, **drug discovery**, and disseminating research) and the **Human Genetics Branch** in the NUMH **Intramural Research Program** have been studying and supporting research on the human genetic variations that contribute to the risk for mood and **anxiety disorders** for a better way to diagnose and treat these disorders. The NIH is also a part of the **BRAIN Initiative**, which is a way to solve the mysteries of the brain in science. NIH touts it as being a way to help people with **Alzheimer's disease**, **Parkinson's disease**, autism, epilepsy, schizophrenia, depression, and traumatic brain injury. It is said that the cause of these diseases or injury is unknown.

On the NIH website a question is posed. Why is now the right time for the **BRAIN Initiative**? The answer:

In the last decade alone, scientists have made a number of landmark discoveries that now create the opportunity to unlock the mysteries of the brain. We have witnessed the sequencing of the human genome, the development of new tools for mapping neuronal connections, the increasing resolution of imaging technologies, and the explosion of nanoscience. These discoveries have yielded unprecedented opportunities for integration across scientific fields. For instance, by combining advanced genetic and optical techniques, *scientists can now use pulses of light* in animal models to determine how specific cell activities within the brain affect behavior. What's more, through the integration of neuroscience and physics, researchers can now use **high-resolution imaging technologies** to observe how the brain is structurally and functionally *connected in living humans*.

According to [american.edu](#): "**Nanoscience** is a subfield of physics dealing with measuring 1-100 nanometers. These are extraordinarily small particles which are engineering processes and tools that **allow the manipulation of individual atoms and molecules.**" Nanotechnology allows for **gene-editing**, additive manufacturing (3-D printing), artificial intelligence, space craft, and quantum computing. Therefore, we can say nanotech has a wide-spread use of applications. All of which are commonly used today, and many more that are set to come out into the forefront, in the very near future. Some - if not all - of these current/future advancements are listed in the cipher as well, unless they admended the plans after the fact.

Gene-editing is done at the nano-level. With gene-editing we are easily able to conclude. The human body's molecular structure could very well be manipulated via particle physics. Could it be one major factor as to why DARPA and NASA are long time partners? Could it be why CERN exists? Also, on Jan 23, they made public intentions to collaborate on the [DRACO program](#).

Did DARPA create some molecular structures that allowed them to manipulate the human genome? If they did it would absolutely be a game changer for the field of defense. Covid initiated defense measures.

Let me switch the subject and come back to this after a bit. That way the naysayers don't throw this down because of all my wild claims. I'd like to address them.

I've already brought some of this up. Yet I didn't go into any more detail. n the cipher a couple of very relative names are mentioned that I've not yet included. Smithsonian,

UNESCO World Heritage, History Channel, PBS, and United Nations, NATO, CCP, World Health Organization, and Russia, plus let's not forget the ones in the earlier list, and a few more. At first, I didn't understand what their relationship would be to one another. But after studying for a bit, it clicked, and I just can't help but commend these guys for the brilliant work they carried out. I will explain as I go along. Maybe this will help to make all this technical jargon a lot easier to read and listen to. Stick with me. The shit gets deep. **It is a global corporate endeavor I'm talking about. They've got a club that we aren't in.**

Scripture points this out in Psalms 2

*"Why do the heathen rage and the people imagine a vain thing? The kings of the earth set themselves, **and the rulers take counsel together**, against the LORD, and against His anointed, saying, let us break their bands asunder let us cast away their cords from us. He that sits in the heaven shall laugh: the Lord shall have them in derision."*

I defy their systems. They've not taken over my limbs and my vocal cords. They do not project voices into my head. But that isn't the case for everyone.

The **Smithsonian** has a story in their magazine called, "[The True Story of Brainwashing and How it Shaped America](#)", with a Subtitle of, [Fears of Communism during the Cold War spurred psychological research, pop culture hits, and unethical experiments in the CIA](#). It was published on May 22, 2017, by Lorraine Boissoneault. Lorraine starts her detailed writing talking about a Journalist named Edward Hunter. She said he was the first person to "sound the alarm" about mind control and the direction of the CCP in an archived Miami Daily News article posted in [September 24, 1950](#), titled "Brain-washing Tactics Force Chinese Into Ranks of Communist Party." Edward warns the people. "There are no exceptions as to profession or creed." To be considered someone that could be trusted you had to undergo brainwashing in Mao Tse-tung's "New Democracy." Without this, you were not going to be depended upon, and as Edward put it, the official expression is worded, to "lean to one side" – Soviet Russia's – in all matters, to react with natural obedience to every call made upon him by the communist party, through whatever twists or turns or leaps policy may take, and to be ready with the right answer for whatever contradiction or evasion may be found in Party statements." Edward goes into more details about how difficult this task is. Saying, "you

have to “change your brains” this is done, too, although not yet as thoroughly or efficiently as in the other satellite nations or in Soviet Russia itself.” Friends, this is a great way to express. We are following the footsteps of Nazi Russia back in the 50s. Have you ever heard of what happened to the Nazi scientists behind all the brutal torture and murder of the Jews? They were brought to the **USA** by the **CIA**. They were given new names and great careers to continue in their horrific crimes against humanity. This is how MK Ultra became an issue (among many other crimes). Honestly, Edward’s little story really gives a complete illustration of what is happening in the United States – just under a guise – and the evidence exists with all the targeted individuals’ stories. Nazi Germany did not end when the war did.

The Smithsonian magazine article gives their rendition of ‘mind-control’ and how it has been used, or continued to evolve over the years, but (with them being in the cipher as a false news propagandist.) I’d have to say they’re not going to tell the full truth. However so, the article gives plenty of details about the course of mind control – that’s touted as “brainwashing.” Of course, this would be why Lorraine ended the article with “for now, the only examples of “perfect” brainwashing remain in science-fiction rather than fact. At least until researchers find a way to hack into the [network of synapses that comprise the brain.](#)”

Scientists had made these discoveries long ago. This is a guise. They’re bringing this stuff to the forefront by saying. Oh, we can possibly help your mom with her dementia. Let us try these types of techniques - or use this type of technology – to run some experiments and see if it works. They know darn well. It works. They just don’t want y’all to know what they know. They’ve been using it to make people go mad and shoot up a school or whatever else.

Meet [Mr. Phillip Douglas Walker](#) he is a victim of **remote neural monitoring**, aka, **mind control**. (pdf) Symptoms of remote **electronic harassment** and mind control technology, “Anything you can think, say, feel, hear, see, smell, taste can be re-created in the same way via this electromagnetic weaponry. Basically, they try to control, torture, and harass you with the range of symptoms they create. These could be anything from physical pains anywhere in the body, to mental fears, to any negative emotions, to torturous/manipulating/undesirable thoughts that are being transmitted. Anything to destroy your life.”

Ever heard of [Neuralink?](#) It’s a breakthrough technology for the brain used to help “restore autonomy to those with unmet medical needs today and unlock the human potential tomorrow.” They say, it has the ability to make peoples lives “better.” Yeah,

just like the grid did when the Spanish flu arrived. Right? I briefly mentioned, there's an old retired navy man who has this implant that goes by John Guard Musik on **Tiktok**. He had been (I say had because his channel vanished again) sharing his story of how he can predict things like the lottery. He even won 50k and sent it to a random address. He did all that because he has this powerful tech in his brain.

I could list case after case for you.

Mind control operating systems would fall under different categories within 'interdisciplinary fields' of researching and discovering materials. On the [neuralink website](#) we are told the N1 implant is "hermetically sealed in a biocompatible enclosure that withstands physiological conditions several times harsher than those in the human body."

This is materials science.

Materials engineering is an **engineering field** of finding uses for materials in other fields and industries. So, when you have tech that can control the mind – but don't have the people down with the program (yet) – then you have to implement it in other ways. Think along the lines of something that can read your blood pressure and monitor the health of your body. You – in the tech industry – would definitely want to know every field you can employ this tech in. In this way, the slow injection of it into society doesn't raise any red flags. Once you find the need. Then you can market and sale to the general public. Until then. Well, let's just say you need a lot of money to know about these corporate technological advancements. If you use the technology for something simple in the beginning, but end up using it for something related, this would be **technology development** and innovative new tools. Do you somewhat grasp why terms such as, 'the **new technology initiative**' would be embedded into the cipher, at the same time as it is used to fulfill job requirements allocated for the installation and **social adaptation model** set forth by Corporate gurus looking for a world based on "more security?"

The medical sector is employing it in pills, the tech companies are selling it as watches, the smart phone app developers are putting it out as an app. Why do you think people reported being put into quarantine camps for 14-21 days because they didn't download an app?

In 1962 a Spanish neuroscientist named Jose' Manuel Rodriquez Delgado took a hand-held **radio transmitter** and transmitted a signal to an implant that was planted in a bulls brain to demonstrate how they could suppress deviant behavior to achieve a "psychocivilized society." Tell me they weren't aiming to employ this in military applications (at first). I will show you otherwise.

As I write this, Israel is under attack by HAMAS terrorists. This event is one of many that will cause humanity to cry out in need of a savior. Their answer will be related to this very topic of mind control. Imagine a world where terrorists can not reign because they've been subdued by the **neuralink** implant or given the **VMAT2**.

Laser beams, ultrasounds, electromagnetic pulses, mind altering, and direct current stimulations and other methods have interested mad scientists for decades. However, it was put on the backburner because there were plenty of people who opposed the idea. No, not the case. They kept advancing the technologies under top secret classifications for the defense industry. Now, people like Elon Musk and Mark Zuckerberg are pouring millions of dollars into the development of **brain-computer interface** (all of which has been created, which is why neuralink exists) as if it's a new revolutionary thing that they're just now developing. ([Quantum Mag](#))

- [DARPA has created an initiative called Electrical Prescriptions](#), or ElectRx, to investigate how light, sound waves, magnets and outside electrical pulses could help soldiers heal. The agency announced it will be awarding grants to seven different teams involved with mapping and treating the **body's electrical systems**.

So, how will they help soldiers obtain these goals while they're out in the battlefield? Where is the system of things to deliver the light, sound waves, magnets, and outside electrical pulses while these soldiers are out in the battlefield?

- [Doug Wever, Electrx program manager says](#): "The peripheral nervous system (communicates) a vast array of sensory and motor signals that monitor our health status and effect changes in brain and organ functions to keep us healthy."
- We should also not forget about using light to control neurons in the brain that the Department of Energy talked about.

My apologies Lorraine. However, you know you're misleading the people for monetary benefits. All one needs to do is research it. Mind control technologies have been developed and they're simply using innovative new tools to slowly inject it into society until they have all the necessary regulations in place that will force humanity to plug themselves in. Lorraine left that Smithsonian article with a link to the **MIT** website about "Complex networks that form the backbone of modern society:"

(Do you notice the words, "forms the backbone of modern society?") They're already in full swing to obtain this. We will see how shortly.

“the internet, the aviation network, the pattern of connections between individuals. And more complex examples are constantly emerging—the way genes interact in cells, how information flows through the banking system and the ecosystem,”

Lorraine said the same thing these other agencies are saying. Remember DARPA talked about bottlenecks in the industry? What do you think Lorraine is talking about here? This was published in 2016. To sum up what the article is about. Let's just say. Don knew MIT would be an extremely fundamental part of the **neuro networks** DARPA is aiming to take lead in. However, I can almost bet my last dollar the Chinese counterpart of DARPA will be the one to take the lead.

The article is essentially about using modern medicine to help the brain concur things such as Parkinson. Then from a more nefarious point of view. “How to control the brain using the electrical activity in the brain's fronto-striatal circuitry.” Well this is weird.

How come Lorraine didn't know any of those things that I'd come to learn with some research?

They're looking to control neurons in the brain. How are they unable to process nucleotide sequences in proteins if they're aiming to control neurons in the brain and have given tens of millions the mRNA protein? And isn't the neuralink already making that happen? Wait, does that mean the mRNA can possibly help them to control the brain?

In order to 'finely tune' a system they must have the capabilities to do the initial job. This means they're not developing it. One must become acclimated with the word play these people use. As I just said. The tech to control the human mind already exists and they are extremely advanced already. They're just slowing implementing it. That's why smart watches and certain video games exist now. They found a way to market it and apply it in other ways other than the main reason it exists.

Mind you, There was a targeted individual that said he was in a group of 16 people that are all dead now who they tried this tech out on in the late 90s early 2000s.

One morning we were stuck in Upstate New York with a problem to our RV because someone cut the bolts off our gas tank and it decided to fall off after we dropped 100\$ in the tank. A random man – who was soiled all up – got to speaking to me. He steered the conversation, as I gave him my attention, this man - out of no-where - begins telling me Hitler was the one who created mind

control. It floored me to see how he outlined it for me using a pen and his newspaper with illustrations of what looked like a coronavirus. Why did this guy just start talking to me about something I'd seen in a cipher? I'd not even thought to write this all out, yet. The Smithsonian is one of the top names in Don's directions. Of course, there would be documented references to the line items in publications, journals, and online materials associated with big names found in the cipher as well. So NGO talking about those things found in the cipher is expected.

I'm no history buff. Heck, I slept through history. So, if I get any of this wrong. So be it. According to this soiled and dirty old man in the gas station, the endeavors to control the human mind started unraveling around WW1 with Hitler. It was his dream, and it has merely grown in its capabilities.

I do believe that we can see evidence of it from one administration to the next. For instance, with President Woodrow Wilson, during his crusade to "[make the world safe for democracy](#)" (who aimed to become a member of the [League of Nations](#)) it is widely known that Wilson suffered neurological issues associated to as many as 6 strokes. He also endured other neurological issues such as temporary blindness, transitory weakness, limited paralysis of limbs or fingers that afflicted mostly the right side of his body. ([HERE](#)). At least, that's what they say. Unfortunately, all we can reference on it is NIH journals, and some journalist publications rehashing the events, because his medical records were destroyed. ([NIH, Woodrow](#)) Needless-to-say, his condition didn't stop him from the getting the 14 terms necessary into the Treaty of Versailles that would be negotiated at the **Paris Peace Conference**. ([here](#)) This model for the **League of Nations** was not welcomed by senate because they felt Wilson's terms would "require the United States to send troops to every conflict that was triggered anywhere in the world." ([here](#)) Sounds like they were right. It appears America has had the need to fight in every war ever fought in my day. Anyhow, By June 28, 1919 the **Treaty of Versailles** was signed. ([here](#)) Guess they made it look like the 'people' wanted it by sending the President out on a tour through the nation to win over the American people.

Because of all that I have come to learn. I know history is the elite's novel of bull crap conjured up in someone's basement or at some satanic ritual of the elites gathering like Bohemian Grove. Guess they made it look like the 'people' wanted it. How do we know this wasn't the narrative they needed to follow to help this end time deception seem that much more real?

We are in our final phase and all of what we see is merely a vessel to obtain the long-standing goal in man's heart - since just after the flood of Noe's day - because the god of this world wants and needs to be honored. This - to me - was obviously another guise to gain a stronghold in industries and markets they otherwise wouldn't have been able to, which is why they were the first worldwide intergovernmental organization (whose primary goal was to maintain world peace), which was nothing more than a good story board to con people into believing all of

it. The International goals were being implemented in the subatomic format that they broke down in the early 5th century.

Why else would all of this be mentioned in the cipher? Remember I said the main goal is a one world government where a mark is going to be enforced? This is an international goal. A goal to control the entire world and to do so entails implementing the mark of the beast aka the RFID chip. It would appear they managed to pull this off using legislative processes (among other things) - across the globe - while shifting people around within their circles of technology advancements and medicine, to continue their medical tyranny. They also appear to have been setting that stage using a narrative that would make it make sense to the people. If the president had neurological issues. Then we better make sure we can take care of people with neurological issues. Now, because of this narrative. Tens of millions in tax payor money would be made available for research and development of remedies. In this case, the remedy is tied to technological advancements. This is why there are aged old books (in the 1700s about people who were insane. It's also why we had all those insane asylums back in the day.

I must also mention. There is also the fact that these historical concepts are also tied into the character names, which is why they're **bolded** and **highlighted**. Think about the possibilities, reasons, and probability all these terms would be placed together inside of character names in a book that talks about being a cryptic vault.

Right now, [Nonsurgical Neuro Technology](#) is a Nex-Gen Nonsurgical Neurotechnology touted by DARPA as:

The Next-Generation Nonsurgical Neurotechnology (N3) program aims to develop high-performance, bi-directional brain-machine interfaces for able-bodied service members. Such interfaces would be enabling technology for diverse national security applications such as control of unmanned aerial vehicles and active cyber defense systems or teaming with computer systems to successfully multitask during complex military missions.

DARPA tells us that researchers are aiming to “develop solutions that address challenges such as the physics of scattering and weakening of signals as they

pass through skin, skull, and brain tissue, as well as designing algorithms for decoding and encoding neural signals that are represented by other modalities such as light, acoustic, or electro-magnetic energy.”

Can't you already see it with this little information I've provided thus far? DARPA is playing with the electromagnetic energy spectrum, acoustic soundwaves, and light to help soldiers (or robots) stay healthy and fit to complete their military tasks, explain to me why they aren't using these systems to keep 'we' people healthy? Don't you think these agencies could use what they know to help humanity? Well, that's where the imagination must come in...

Before we go there.

Project Pandora is another DARPA project that used the microwave electromagnetic system to control the brain, which allowed another person to control the actions of someone else. In 2019, DARPA announced to resurrect the program. ([here](#)) We can prove the stuff (I've eluded to since the beginning of this writing) has been going on for decades.

[National Security Archive Posts, 'Special Declassified Collection on Microwave Transmissions Aimed at U.S. Moscow Embassy in 1953-1979.'](#) It's 2017, and the 5th anniversary of the CIA's decision to pull their people out of Cuba (because they were struck with Havana Syndrome.)

The **havana syndrome** is a nick name for showering people with microwave transmissions – in other words – electromagnetic radiation. It's not widely known, because they hide this stuff from the people under the umbrella terms of national security. However, now that they've released this information to the public, we can definitively say, the US Embassy in Moscow was hit continually - by Soviet Intelligence - with these microwave transmissions back in the 50s. Was the Soviet people's heart in the right place when they created NASA?

Operation Paperclip is where they brought NAZI scientists, that were behind horrific crimes during the holocaust (and later charged in Nuremberg trials where the nurses were sentenced... just not the big guys overseeing them) nope, they brought them into the US to continue the Soviets insanely criminal mission with taxpayer dollars. So, when I say, these are the guys behind the development of these systems (that are causing countless citizens sickness from electromagnetic radiations aimed at people) we can't exclude the American governments involvement. That one factor proves to anyone - with any common sense - that governments have closer ties than what we

understand because of what we are told. The stuff that applies to the grid also applies to all of the systems employed by NASA, and those systems aren't regulated, which is absolutely insane when you think about it. The guy behind the creation of NASA was a NAZI Scientist. Haven't you heard what those guys did to humanity? They're cold blooded.

The declassified report says, in 1964 numerous "bugging devices were discovered." They had been "hidden in the walls of at least eleven Embassy offices—including the office of the U.S. Defense Attaché." It was then that a series of countersurveillance measures began that focused on an energy beam directed at the building. In 1953 US technicians had first detected energy rays, not long after the Embassy opened. However, they didn't actually take initiatives to monitor those rays until the early 60s. About three years later, a State Department staff member identified the beam as microwave radiation and that it was 50 feet across. That's when they decided to make more of an effort to understand why it was directed at the Embassy. Under codename "TUMS" (**Technical Unidentified Moscow Signal**) then by 1970, a second signal was identified and they changed the codename to "MUTS." This is the basis of **project Pandora** and BIZARRE studies, which included:

- Project Big Boy: crew members aboard the Navy's aircraft carrier Saratoga were monitored, tested, and evaluated physically and mentally between distinct groups of the crew members who were subject to microwave radiation generated by the instrumentation.
- The Monkey Experiments: Chips and monkeys were involved in radiation experiments. They tested if there were any changes in behavior modification, and other things. Poor animal care was reported by RAND Corp and animals died from it.

Planning for human experimentation: HERE is where things get interesting. Declassified meeting notes says they were planning to experiment on human subjects who would not be aware of the radiation tests. This is a common practice of these agencies. They didn't do it one time and stop because it was unethical. The only reason they've brought anything out on it, is because they're always having to cover-up what's happening in real time. This project was closed in 1970. (Or so they say, and quite frankly, I believe nothing of what they say.)

- The **State department** also played a role in that they commissioned **George Washington University's** Human Cytogenetics Research Laboratory to conduct a secret study called Cytogenetic Evaluation of Mutagen Exposure. "The study gathered, coded and analyzed blood samples taken under false pretenses from U.S. personnel posted in Moscow. They were told that the State Department Medical Office was monitoring the spread of Russian viruses. Publicly, the research was given the innocuous title: "The Moscow Viral Study." If they didn't have the geospatial technologies being used to track this stuff on a wide-scale then, how the heck were they keeping track of this stuff? Also, take note of how they tell the people lies to cover their tracks!

This is just a brief history of these alphabet agencies. They've been doing this. It's deeply woven into the framework of our society. This is why the declassified report has an incomplete history, much of it is still TOP SECRET, and other organizational involvement is also classified. This confirms, that over the course of more than a decade, people were subject to these microwave rays and there were people that had no problem ciphering through data sets compiled by medical professionals to monitor the effectiveness and results thereof.

As I mentioned a moment ago, I know from my own experience. These techniques aren't new. Nor, are these technologies just being developed, tested, and implemented. They've been being used in a much more nefarious fashion than most people could fathom.

Here is how I know. I am a victim.

Legislative changes are paving the way to a **digitized future** and world domination. While the people in the upper echelons assist in controlling the narrative. This way, they can sneak up on you and make you fall into the traps they set.

Don't you see what is happening here? Are you blind? We are a place of corporations with corporate goals. When 1% of society owns and runs everything controlling the 99%, guess what? You have no options for anything.

Medical Tyranny, it can fly.

Controlling the news, they can do that too. Heck, they began to do that in Woodrow Wilson's term when an executive order signed in 1917 created 'the

nation's first ministry of information' following the footsteps of the Germans ([here](#), [here](#)). American leaders must've loved the Germans /Russia because they've a lot of connecting factors. Anyhow, the **executive order** allowed **congress** to actively control what the news press put out. Since then, all the news agencies are owned by the top families. So they work feverishly to keep a narrative that is void of truth.

Now, it is larger than you can imagine – unless you've done this research yourself before – cause it's a larger than life lie!

International leaders concerning the grid and other relevant topics:

The **Council of Foreign Relations** goes into how the [US Power Grid Works](#) ([here](#)), and on their website, you can find information on the Smart Grid, how the US Grid is regulated, and how **greening the grid** would **affect the climate**.

The CFR focus on the energy grid is key to the narrative. These guys are the ones who control the start and ending of wars, foreign aid, and immigration. Why are we experiencing immigration issues here in the U.S. right now? Humph... Never mind that. They fund both sides of wars and have ways of making money to fuel it without ever doing anything more than earning more than before in the process. Bringing immigrants into the states will end up a win-win for them because of the end goal they're aiming to achieve.

DARPA's Power and CFR's visions are fundamentally complimentary to one another. Power is just a by-product of the Council of Foreign Relations goals. CFR had a goal to make changes that pertained to the grid because that's the direction the world leaders wanted to take. This energy grid - they began installing years ago – is headed into a faster, smarter, speed of light BY DESIGN my friends.

The point here is to point out. The technological advancements line up with the **new technology initiative** CFR set forth more than a generation ago.

According to Don, the world bank appears to be a global leader that bridges countries together with their focus to "end extreme poverty and promote shared prosperity in a **sustainable way**," there is something else they're promoting via the **Sustainable Development Goals of 2023, which** I will not go into full details about because there are plenty of resources to understand more - after reading this book – that are linked below. You can educate yourself further by researching the links provided below. The point is to point

out the 7th goal of sustainable development 'affordable & clean energy,' the 9th goal of industry, innovation & infrastructure, and the 11th goal of sustainable cities and communities. All of these different goals are a driver to a "new ecosystem" planned out by the elite that you hear others speak about often on their websites and in other public works. What most don't know is this ends in total and complete control over humanity.

The **World Economic Forum** seems to be what Don would consider as part of the **Executive Leadership Team**. This merely means they're doing the work of the world bank to carry out the sustainable development goals right alongside these other key-players. In 2018, they launched an initiative to protect and strengthen the global electrical grid.

The United Nations: Goal 7 is about affordable and clean energy, which is said to be the key to development of agriculture, business, communications, education, healthcare and transportation. It is said, "the lack of access to energy hinders economic and human development."

W.E.F reports, "the **Energy Information Administration (EIA)** expects the largest increases in the U.S. electricity generation this summer to come from renewable energy sources and **natural gas** contributing to a 15% reduction in **coal**-powered output from the previous year." Anyhow, they have a monthly energy report that comes out in a publication of recent and historical U.S. energy statistics. The publication includes **total energy production, consumption, stocks, and trade, energy prices; overviews of petroleum, natural gas, coal, electricity, nuclear energy, renewable energy, and carbon dioxide emissions; and data unit conversion rates.**

Oddly enough, well into my research I began seeing that history just doesn't seem to add up when you really research these things with a fine-toothed comb. I must tell you now, so you will pay close attention to it, all the different historical declarations of these systems of systems appear to be something that's been around for longer than what the world's narrative says. You should've already picked up on that.

What if I were to say, pretending like ancient history is lost and they've got to find it - to re-create it - was a purposeful act? I mean, Don alludes to them "fixing the science" which tells me they do things like kill doctors. So, they don't talk. A dead body is better than a loudmouth who will bring their plan out into the open (like I am doing here), which is exactly why they keep trying to sabotage this work!

People should collectively know this from scenarios such as the **CDC** scientist who said he knew something about the flu vaccine. He was supposed to meet with a guy, never showed up, and was later found in an embankment. The news told us he was suicidal. But they also tell us the same thing about different sketchy scenarios; like the 50 plus people who shot themselves in the back of the head (that knew the Clintons) or the many holistic doctors who were randomly murdered in freak scenarios. Heck, Brandy Vaughn who worked for Moderna should be more than enough reasons to get the picture here. But I would bet my last that most of you haven't even heard of any of these stories and if you have all you know is what the news has told you. Why would that be? Could it have something to do with the media? Why did it take me saying it twice for you to consider it?

Don has also said. There is a boatload of **false news** from every direction just to keep the people from understanding what's happening. Ideally, this would help them to keep the resistance levels at minimum. Resistance to what though?

How about making you into a

HUMAN COMPUTER?

(Magazines, publishers, radio stations, and media outlets are also all embedded into the ciphers contents.)

Did you know that the human heartbeat be [translated into a frequency](#)? Wouldn't it be easy for some terrorists to come into the battlefield with technology that could stop a heart in an instant? If the CCP decided to come claim their American land, would they be app to doing something of this nature? What would the repercussions for doing so be? According to legislation. The crime would not be penalized. Could this be one of the reasons "**cyber-security**" issues are on the rise? Would these two have an intricate relationship? It would seem to me. They're causing the problems, and pressing legislative issues, so they can change laws that will help them in the future, for the final part of their plan. They could easily be pushing hacking to cover the biohacking that's happening under the umbrella term of "national security" against people's own will and without their consent.

They cause problems to become the solution. They also like earning money off of people's pain. The more money they take out of your cities the less control you have over your own lives.

If you were infected with a nano-bot. Would you know it?

So, as you can see. These things do come together like a puzzle. Materials science is what helped birth nanotechnology.

On another note. Most people believe materials science and defense is only applicable to terrorists or military development. Oh, how man's beliefs of terrorists are skewed, because of what we've been told. I am considered a terrorist for taking this path I'm taking now.

DARPA said - the cellular network - is like the power distribution network they aim to create "once they concur conversion rates." In my studies. I realized they were talking about converting every small business, bank, and healthcare system into their artificial intelligence network. We see that happening right now.

The main operational goal for DARPA is to "make pivotal investments in breakthrough technologies for national security." I know people will want me crucified for this one. However, these investments seem to be put into people who will uphold a lie, and put forth exactly what the world leaders wanted, even if that means it costs people their lives. Secrecy clauses in contracts set forth to secure and hold a job would easily keep these people in a "lock-jaw" sort of position. Why else did COVID really initiate defense measures? Wasn't **TB** or the **Swine flu** just as bad?

Anyhow, DARPA has small satellites in **low earth orbit** (LEO) that's expanding space-based capabilities. They claim these are - "critical to both government and industry." ([DARPA](#))

Government and industry...

Like the semiconductor industry? Well, aint that just weird. China Nukes Taiwan or invades them. What will happen to the semiconductor industry then? It's probably aint wrong to also mention the brokers who are warning Americans to purchase up **precious metals** or invest in minerals. I'm not going to delve into all the details, however, Darpa's focus on materials science is a significant part of world leaders' goals.

Semiconductors and the likes are all in the line of things that DARPA would mess with. Well, that sort of stuff would be found in a computer.

Computer chips just so happen to be a critical piece of our economy and our **nations'** security. It is said, "*the federal government must protect and nurture its microchip supply.*" ([NSTXL](#)) Needless-to-say, the CCP is gaining leverage on the United States microelectronics economy. Then Don alludes to them taking over in artificial intelligence, hypersonic, and quantum computing.

In 2007, all Chinese citizens had to carry a national identification card with a microchip, and they were installing cameras with sophisticated computer software from an American financed company, to automatically recognize suspicious people and faces. This puts a little damper on the, 'China is our enemy' narrative. But that's not important. Or... Is it?

The chip I'm talking about has most all of their personal identification; such as **reproductive history, social score, and medical records.** (Nytimes) It's been reported that Chinese citizens have been denied the ability to fly, catch a bus, or buy groceries based on this identification system. Might I also add, it would seem to me, the world leaders are aiming to tear down America and make China the next world superpower. And someone is looking to lead the revolution with a good financial backing. The semiconductor industry could soon see a supply and demand problem.

I could talk more about that. However, I will leave that for a future writing.

The **Commission for Science, Technology, and Industry** for **national defense** is the Chinese counterpart of DARPA. I find it odd that agencies like DARPA and the Chinese counterpart of DARPA are embedded into the same character names found in a book. Heck, so is German agencies, **Australian forces**, and the **European Union**. As I keep saying, the list is extensive. **Iran, North Korea, Ireland**, and places that I can't even remember. It would be nice if my work wasn't always sabotaged. I could really show so much more than I will be able to share in this condensed version of what I know. Anyhow, the reason I say this is because of the global concerted effort to bring in the New World Order. The most detrimental aspect of that push has to do with this technology revolution.

It is imperative that we know the difference between a narrative and what the truth is. I had to pose a question. What was DARPA going to convert? What if I told you the primary goal is to convert YOU into their hive minded system? You are already being turned into a walking computer without your consent, because most of you have no idea how it's happening (or even that it is happening at all!) Heck, I must point out. They can kill off most of humanity using the electrical grid. This will fulfill the first commandment on the **Georgia Guidestones**. I feel like this is why they blew them things up. They are at the point where they can achieve it. And most of humanity doesn't even have the slightest clue that the electrical grid could do so much harm. It is true. The elite have a global execution plan for 7 billion people. If you don't believe this to be true once you're done reading this, your brain is either already affected by the lights and electromagnetic system and you are the walking dead, or you're simply in denial.

Ephesians 5:14 Wherefore He saith, Awake thou that sleepest, and arise from the dead, and Christ shall give thee light.

The Smithsonian has an article titled, [Mesoamerican Sculptures Reveal Early Knowledge of Magnetism](#), that tells us ancient cultures in the Americas and Greece (among other cultures) had knowledge of magnetic forces. The article even says exactly what my thought process concluded long before finding this article - magnetism shows evidence of being ancient knowledge and it seems we've merely grown in our knowledge base. (Smithsonian)

And as usual, you go to research this stuff and it's a bunch of different terminologies with different perspectives on how things went down.

Another interesting tidbit about history is found in similar writings to this PMC PubMed article that says;

"While their existence had been already hypothesized in antiquity, magnetism and electricity were first clearly described in the 16th and 18th century, respectively. In 1820, Oersted was the first to identify and report an interaction between electricity and magnetism by showing that a magnetic needle is deflected by electric currents." (google keep)

Do you notice that this PubMed publication does not reflect the same thing that the last one I quoted does? Do you find no issues with that? Heck, did you even pick up on the difference? Look, PubMed publishers know this idea goes back to our early ancestors, which is why they chose the wording used. The journal writer clearly knows how to play with words. This is a pretty neat factor I've come to learn about along the way, that helped shape a hypothesis based on my observations. I've already mentioned the most important part a moment ago. However so, this is still important enough not to leave it out. To say Oersted was the 1st to identify and report is not saying he is the one who first did work in the area. It's merely saying. He is the guy who presented it to the world with his demonstration of it. Not only do they not have a clear-cut timeline on the subject, but you can also say the same thing a few different ways and still never be telling a lie or being perceived as if it's not the same. It's pretty brilliant. This factor should be easily noticeable in this writing, which was a strategic move on my part. I did this in hopes of making you see it and grow annoyed by it. That way, you can go read up on some of this stuff and see how they talk circles around people using vocabulary. For instance, electromagnetics is rf frequency, has different waves, and can also be considered light energy or photon energy.

That's a simple explanation. However, when you research this stuff. None of this is outlined in a simple format.

Let me explain a bit differently.

Magnets and electromagnetism go hand in hand. But, get this, professionals claim they're different. Magnetism only discusses magnetic fields. Electromagnetism is a cluster of time variant magnetic fields and time variant fields. Ancient cultures knew about this force. ([Wiki](#)) Britannica says electromagnetic and magnetic forces have been known since antiquity and it wasn't until they could produce large amounts of material to make electrical goods did a bunch of research on it come out. Although there are texts, images, and carvings that suggest a force has been known and used by ancient cultures, they expect us to believe the ancients didn't pass this knowledge down to us. What could they be hiding?

And, just for contextual understanding, electromagnet is a magnet that's temporary. So long as there is a current flowing in a coil, the device works as a magnet. It is made by winding a copper coil over a soft iron core. A magnet is permanent. It doesn't need any electricity. If the magnet is heated above a certain temperature, only then, can it lose its magnetic properties. Energy lines – or electrical lines – create magnetic fields whenever power is flowing. (Nagwa) This should tell you. We are surrounded by magnetic fields (unless you live in the middle of nowhere with no power and even then, you encounter it daily.)

The differing of opinions about magnetism and electromagnetism is a narrative. As I said earlier, the truth is, these two terms aren't really any different. Look it up. According to Maxwell's 1873 paper on the subject, he proves these two are intimately related to the point where you don't even find a difference. In a natural magnet, not all electrons are found aligned pointing to the same side so that other electrons are repelled. Essentially both are electrons repulsing other electrons and attracting protons. That is simpler to understand than to break these terms down and pretend as if they are different using a bunch of useless jargon. The length of time it would take anyone of us to figure out these two are the same would be longer than knowing the basics of the difference, which could be easily outlined in the explanation of these two terms. I wasted nearly an hour learning something that needed 5 mins or less. They know you don't have any time to sit down and figure that out on your own. So, you're always going to believe the two terms are extremely different when they're basically the same.

Look at ancient hieroglyphs and tell me if Oersted or Maxwell created and demonstrated this stuff first.

You can't.

I find it interesting, all this study on electricity began around the same time electrical power began to show itself in mainstream, this causes a few questions to arise. So, this guy Hertz – a German Scientist – demonstrated that you could transmit and receive electromagnetic waves. How do we know they didn't do this over a city or a state? Experiments began long before the generation of our power grid in the 1700s. Look at the history of it. Around the same time Ben Franklin got credited for discovering electricity with the kite. Did he fly that kite over a city or neighborhood? How would you and I know? We weren't there. How do we know they did or didn't experiment on people long before the generation of our power grid? Oh, you should really enjoy the linked studies about:

- The Real Electric Frankenstein Experiments of the 1800s, The real Frankenstein experiments (ATLAS Obsura)
- NIH's brief history of experimentation on condemned and executed humans (1995)
- Humprey Jackson, F.R.S., 1717-1801 A Pioneering Chemist
- Secret War Experiments in Singapore, A story of the Japanese Army (2018)

These gave me a tad bit more context to understand the reasons, these also allow anyone of us to see there is no limit to their lies, and come up with a more believable historical timeline.

What if the ones who were being recognized were the ones who would hold up the narrative that the rulers wanted them too? We looked at magnetism and electromagnetism and found they're basically the same. What a waste of people's time. Wanting to learn more about specific topics isn't wrong. Some people are very versatile and want to have knowledge of multiple markets, but with useless jargon dominating the markets, one could take 10 mins to see the similarities – or weeks to study the differences – only to find out the two are the same except for the one attribute.

Needless to say, the way information flows make this situation strange in and of itself. Think about it. Why would the leaders of our world want to make things so simple seem so difficult unless there were something to hide? How many people have the time to prove these things out? Shouldn't industry leaders be oversight

for the people, which would prompt them to cut out all the confusing jargon, so you could easily understand it? Also, let me point out, this writing proves you can say the same thing multiple times and not say it the same way.

Let's really use our **critical thinking skills** (yes, that's in the cipher too), and analyze some of what we have learned, after we cover a few more topics.

Let's keep in mind some really important details. Darpa is researching and implementing technologies that work on the available RF spectrum.

1. SETI is working on technology used on the available RF Spectrum
2. NASA is working on technology used on the available RF Spectrum
3. CFR's focus is clean, green energy and smart cities centered around the RF spectrum.
4. [The United Nations](#) is focused on ensuring access to affordable reliable, sustainable and modern energy, centered around the electromagnetic spectrum, which includes the RF spectrum.
5. The World Health Organization (as of the time of me writing this) has a webpage about the Elf and ELM that's down. They're the ones who are supposed to be acting as a regulatory mediator to ensure the RF Spectrum doesn't cross their boundaries and harm the people.

These different systems are a factor in the environment around you and me, which is why we have different agencies overseeing them! This agency is supposed to work on our behalf to ensure we aren't being harmed by their emissions. When they tell us there is no reason to worry about these things who wouldn't want to believe them?

Thunderstorms produce electric fields by local build-up of electric charges in the atmosphere. How can thunderstorms produce local build-up of electric charges if we aren't in a closed system? There are a lot of questions to pose. But we won't cover them all. I'm just saying. If thunderstorms can occur from local-build up of electrical charges than NASA's equally spaced out locations could also be a primal factor in making these electric charges occur in the atmosphere around us!

Don shows me. They are controlling the weather. They're just telling you that people are lying when they say they can do that. Friends, they have been creating these storms that take out entire neighborhoods.

Don lists

- Hail storms
- Thunderstorms
- El Nino
- El Nina
- Hurricanes
- Tropical Storms
- Flooding
- Landslide/mudslide

There is even a grid associated to show the areas storms, fires, gas leaks, and water main breaks will hit (among other things), just like the grid about the clouds. All of this is compacted into the cipher.

Heck, I can show you in the cipher where locations outlined in the area that has Intense hurricane mention the locations were hit with an intense hurricane. What are the odds of that crap? I don't care what you say. I know, they're steering the atmospheric pressure systems. NASA posted a new look at earths lightening 1995-2020 on its website and tells us they've been studying lightening since the 90s. They have the ISS LIS and the OTD that enables them to measure lighting all across the globe. They know the length of time a lightning bolt strikes for, the length of the bolt, its direction, and whatever else is related to lightening. Is this because they've been creating the lightening storms? I'd say so.

The different chemicals, viruses, bacteria, placed into aerosol injections, and even how it will affect the people are all embedded into the cipher. This would be unethical experimentation on you and your loved ones.

On another note.

Nanoparticulates would/could be steered using the same system to deliver electricity and cellular communications. And it could be the #1 reason heavy metals are found in our soil, bodies, and water globally.

Here is a small list of line items attributed to this:

- Rare earth chemistry
- Release engineering
- Frame sync
- Microwave unit
- Mouse Unit (biological measure of toxicity)
- Measurement Uncertainty (gage repeatability and reproducibility study and in quality-field)
- Urinary bladder
- Androgen receptor

- Bacterial infection
- Biological indicator
- Febrile Seizure (neurology)
- Buffer index - has to do with acidic and ph. levels.
- Body Inflation (artificial physical transformation)
- Delayed Release (medicine)
- Diabetic Retinopathy
- Field specimen
- Aerial platform
- Soil contamination
- Sulphur Trioxide in Chlorosulfonic Acid
- Asparagine (amino acid)
- Nucleoprotein (virus protein)
- OverNight (cell growth)

These line items say. Someone is creating the virus, someone is spraying the virus, or putting it in food, someone is testing the water or soil.

Hypothetically speaking. Looking at these line items we could say. They use delayed release particulates that act as virus proteins with a growth rate of overnight that can contaminate the soil. You see? The line items from Don's directions go together so easily it's almost scary.

You can't make this stuff up.

In fact, I believe this is exactly what NASA is really doing at the **Astrobiology Institute**. Or maybe it's related to behavioral science? Or wait! It could be the **Jet Propulsion Laboratory**.

Let's continue to jump in and out of all these different topics.

Radar absorbing material RAM helps to mitigate any radiation that comes from all the energy grid around us, it is also used in these applications-

- [Recent progress of nanomaterials for microwave absorption](#)
- [Scholarly articles for radar-absorbing material in genomics](#)
- [Skin collagen fiber-based radar absorbing materials](#)

'Radar absorbing material' wouldn't be necessary if it weren't for the electromagnetic system. These are indivisible systems. Without knowing the electromagnetic system, you will not know how to make radar absorbing materials, because there would be no radar absorption necessary.

Polymers (like polyester) and other like nano-based materials would be an important factor in the system as well. Did you know what you are currently wearing could help the electromagnetic system flow through you easier or keep it from flowing through you? In fact, there were photos floating around about the Hawaii fires. Cars were incinerated. But a couple blue umbrellas were unscathed. How could this happen?

It has to do with the wavelength of colors! Lasers would affect blue in a different manner than yellow, orange, and red.

Now this can also be found when we look at the meaning of photoisomerization.

At the atomic level, "*When light hits certain chromophores in proteins, it causes them to twist and change shape. This atomic reconfiguration is known as photoisomerization, which changes the molecule's chemical and physical properties. The hallmark of this process is a rotation that occurs around a chemical bond in the molecule.*" "Photoisomerization modifies the polarizability of a molecule leading to changes in the linear optical properties".

So, from this one key term we can learn that light can be used to target chromophores in proteins. This told me, colors would be a primal factor in how photoisomerization works. This is a biochemical process and people employed at NASA facilities would be acclimated with it.

So would the **National Human Genome Research** center:

"Researchers can use DNA sequencing to search for genetic variations and/or mutations that may play a role in the development or progression of a disease. The disease-causing change may be as small as the substitution, deletion, or addition of a single base pair or as large as a deletion of thousands of bases."

For us to say they're just looking for ways to process nucleotide sequences in protein is to say they don't have high-speed computing already. If they don't have it already (which they claim they are creating high-speed processing) how are they getting tens of millions to take the mRNA? How are researchers using DNA sequencing to search for genetic variations and/or mutations if they don't have the proper high speed scientific tools to process the different sequences in proteins?

Make that make sense...

On [healthmanagement.org](https://www.healthmanagement.org) we can find this relative statement: "Imagine a day in which your genome is a critical part of your medical record, referred back to often by your provider when making care decisions. **This is our long-term objective.**"

The statement alone tells us. This goal began many moons prior.

According to a 2014 publication ([linked here](#)),

This coincides with the "June 26, 2000, timeline President Clinton and a group of world-renowned scientists presented when they told the world about the first genetic map of the human DNA molecule. Clinton called the discovery the "language in which God created life." His full statement is found at [ClintonArchives](#) and is as follows:

"Today, we are learning the language in which God created life. With this profound new knowledge, humankind is on the verge of gaining immense, new power to heal."

The June 26, 2000, press conference announced the international Human Genome Project and Celera Genomics Corporation "completed an initial sequencing of the human genome - the genetic blueprint for human beings." At this conference President Obama announced the Human Genome Project had mapped the nearly 3 billion letters of "our miraculous genetic code." (Genome.Gov)

Random Key terms:

1. **New Technology Initiative:** The White House was said to push Tech C.EO's to limit risk of AI. New York Times, "President Kamala Harris and other officials told the leaders of Google, Microsoft, OpenAI, the maker of the popular ChatGPT chatbot, and Anthropic, an A.I. start-up, to seriously consider concerns about the technology." ([Here](#)) 2022 ChatGPT and OpenAI were released.
2. **New technology integration:** "In many industries, superior technology integration is the key to achieving superior R&D productivity and speed—and superior products.

Technology integration is the approach that companies use to choose and refine the technologies employed in a new product, process, or service.” – [DELOITTE](#) is spearheading this.

3. **New Technology Institute:** [New England Institute of Technology](#).

Let’s also point out what this international pledge would allow according to the [press conference memo](#):

- Alert patients that they are at risk for certain diseases;
- Reliably predict the course of disease;
- Precisely diagnose disease and ensure that the most effective treatment is used; and
- Develop new, more effective treatments at the molecular level.

This means, a high-speed genetic sequencing scientific computer was in existence 23 years ago.

There is an entire industry of relationships that don’t necessarily take front and center stage that have been hiding in the recesses of darkness. Like IBM provided tools for atomic manipulation since 1989 when IBM created IBM in atoms. ([here](#)) Why create something in 1989 for atomic manipulation if they weren’t already using it?

In the year 2000 the United Nations brought more than 180 countries together to formulate the sustainable development goals. The [seventh sustainable development goal \(SDG7\)](#) plays a “crucial role in advancing health.”

[Department of Energy](#), Website excerpt:

One of the most important developments in the field of biology over the past century was the Human Genome Project (HGP)—the ten-year U.S. government-spearheaded effort that culminated in the first complete sequencing of a human genome in 2000. The HGP launched the field of genomics, transformed medicine, and largely gave birth to the modern biotechnology industry.

The original idea and impetus for the HGP came from DOE’s Office of Science (then known as the Office of Energy Research). At the time, the sequencing of a whole human genome was viewed as an all-but-impossible task. But based on the historical experience of the office with large scientific

*endeavors ("Big Science") dating back to the **Manhattan Project**, there was confidence that with sufficient federal resources, the task could be accomplished. The ostensible reason for the initiative was DOE's interest in better understanding the genetic effects of radiation exposure.*

- The **Human Genome Project** is said to be one of the greatest scientific feats in history. I believe this is because they know they can create a race within a race of humanity using these scientific methods without people even knowing it's happening. (NIH) Are you in denial? That means, you're just who they wanted you to be for this time.

Energy.gov You can begin your [research here](#).

He did however know the whole platform was installed little by little and the evidence is found within all the contradictory statements, the history of experimentation, and the platforms now being brought out center stage.

The United States government, the World Health Organization. The National Institute for Health, Nightingale, World Economic Forum, the Technology Symposiums, would come together to ensure implementing the (mRNA) technology (and complimentary technologies) way prior to this life changing situation. In fact, this situation did not organically come about. Instead, they strategically planned this out over the course of many years.

Pandemic bonds were created in 2017. Long before the Covid pandemic. ([W.H.O](#)) They planned on outbreaks happening in 2019, so they did [exercises](#), to role play it out in preparation of. After all, the 1966 Cov transnational manipulation of humans exists, and it wouldn't, if what I'm saying wasn't already occurring at that time. It is them who say - in medical journals - the mRNA was developed a decade ago and they do not know everything about it yet. A decade ago would be 2003 which so happens to be [when Infectious disease dominated health news](#).

"**Genome Medical** cuts through the administrative challenges associated with [making genomics part of the standard of care](#), through a combination of **telehealth technology** and services." Why do you think they're taking everyone into a new era of medical assistance by automating everything and allowing us easier access to healthcare via the phone? So we now know Genomics taking over the medical sector was a plan of government that was announced back in 2014. It's been 9 years since then. On [healthmanagement.org](#) this relative statement: "Imagine a day in which your genome is a critical part of your medical record, referred back to often by your provider when making care decisions. **This is our long-term objective.**"

In recent years, **optical genome mapping (OGM)** has developed into a highly promising method of detecting large-scale structural variants in human genomes. It is capable of detecting structural variants considered difficult to detect by other current methods. (NCBI, Genome mapping)

When Covid hit there was a **fiber optics system** being put in place since. It may already be installed from coast to coast. I'm not fully acclimated with this part at this point. I just know the basics. In almost every fiber optic network, light travels through plastic or glass fibers – in DARPA's fiber, light travels through an air gap, allowing for networks that are faster, have more bandwidth, and traverse greater distances. On a DARPA news report, posted on their website, it is said that "the intensity of light that propagates through glass optical fiber is fundamentally limited by the glass itself. A novel fiber design using a hollow, air-filled core removes this limitation and dramatically improves performance by forcing light to travel through channels of air, instead of the glass around it. DARPA's unique spider-web-like, hollow core fiber, design is the first to demonstrate single-spatial-mode, low-loss and polarization control-key properties needed for advanced military applications such as high-precision fiber optic gyroscopes for inertial navigation." Cougar is a program that allowed DARPA to bring this hollow core fiber into the United States. ([DARPA, fiber](#))

Tranceiver assembly (wireless) is found in fiber optics. In local area networks, the tranceiver is a part of the network interface card. It can both transmit signals over the network wire and detect electrical signals flowing through the wire. However, some types of networks require an external tranceiver. This wireless transmitting signals device would be applicable to a higher range of engineering. What I mean is, in a fiber optic system there are more than just a tranceiver assembly. Other things would go in conjunction with it to obtain the desired goal. For instance, in a mobile phone, if you have a tranceiver assembly and don't have anything else, you aren't going to be able to make a call. There is more than a tranceiver assembly in a phone to make up what we know as cell phones. This would be in direct relationship with the fiber-optics system recently installed in various neighborhoods across the world.

There are hundreds of these kinds of line items. They basically tell me that if I took the time, I could build their entire system down to the detail. I could know the very things they use, their carriers/providers, and the basic equations they use. For instance, look at this small list.

- Reynolds Number (inertia force/viscous force) – a physics term
- Universal Gateway (computer protocol) – part of an autonomous network
- Straight Tip (AT&T fiber optic connector) – another part of an autonomous network

- Symbol Time (algorithm) – an application used in the software of an autonomous network
- Theil Statistic (software reliability) – a software reliability model for a homogeneous Poisson process
- Statement (Spender Audio Systems, Ltd.) – Part of the United Kingdom Government, company number 03888529, guess the audio systems company would be making a statement? What's even weirder is in December of 2021, and September of 2022 they did make statements. How did Don know this? You can't make this stuff up. He also told me there is an advanced audio system
- Diodes for Isolation – SAE International describes this as. "It's function is to block any flow of current from the battery back to the alternator and at the same time to permit use of the popular charge indicator light." It's labeled as an electronic alternator system. (SAE)
- Software test – they got to test the software.

Is this what was/is currently being installed (I've no idea where they are in their timeline of installing the hardwares and software systems in every sector, city, state, county)?

I do know that there were fiber-optics installed. In fact, I talked to one of the guys who lined this mobile home park I currently live in with fiber-optic cables. I also know towers were being thrown up as people were staying home from their jobs due to the lockdowns. Then there are also businesses and schools all over the states that now have microwave towers on their buildings, and neighborhoods are equipped to run whatever they desire. There is a new tower not even a quarter of a mile away from me now too.

Line items from cipher:

- Microwave subsystems
- Microwave radiometer
- Microwave switch (electromechanics)
- Microwave sensor
- Microwave system

Some of these towers look like cactus, trees, and even water towers. They were installed in my neighborhood just over a year ago. Don alludes to the fact that they're not just for good cellular service. In fact, it doesn't appear these are for cellular service at all. He seems to point to them being put in place for another reason. It seems that reason relates to defense measures and medical tyranny. Let me not forget it will aid them in lowering the population (5g.com) Heck, it is highly possible that project blue beam may benefit from it as well. Don't let me guess on anything. I'm the

type of person who doesn't want to put out anything false. Explaining myself seems to be the only way around that. I would hate to be misunderstood.

Medical fiber optics is vital to the medical field that got started with endoscopic use. They're medical fibers that are chemically sterile, flexible, and nontoxic to the body. (NAI Group, Medical)

Let's keep moving forward though. As I mentioned before. There is far too much information to get stuck in any one topic at this point. In my quest to learn more about Don's directions, I asked google. Are computers used in molecular biology? I did this, just to see what google would say, because I do know computers are used. Anyhow, the answer google gave. Yes, the current use of computers is limited to data management and sequence comparisons, but rapid growth in the **volume of data** is **generating pressure for the development of high-speed analytical methods** for deciphering the "connecting nucleotide sequences with *protein structure and function*."

But that's not what **NCBI** says (as I pointed out a few paragraphs back). So, if I were someone new to the field - who didn't know anything at all - I'd not be getting the truth from a google search. When I studied the topics (in a surface-level kind of way) I realized there were a lot of lying journalists too. So why are market leaders, researchers, and journalists saying something different than what industry leaders say?

Let me reiterate something I may have already stated. It appears the technology already exists. They are not looking to "generate high-speed analytical methods for deciphering connecting nucleotide sequences," because they already have it. Before going into more details on this. **Let's look at some key terms.**

- **Tranceiver assembly (wireless)** is found in fiber optics. In local area networks, the tranceiver is a part of the **network interface card**. It can both **transmit signals** over the network wire and detect electrical signals flowing through the wire. However, some types of networks require an external tranceiver. This wireless transmitting signals device would be applicable to a higher range of engineering. What I mean is, in a fiber optic system there are more than just a tranceiver assembly. Other things would go in conjunction with it to obtain the desired goal.
- At the lowest point of the overall goals we find smaller companies like [Juniper Networks](#) Inc. These guys handle the routing engine and may supply some of what goes with the cell phone's (such as cables to charge your phones.) Juniper says they "offer a broad portfolio of high-performance and cost-effective optical and electrical cables in various form factors and speeds for [data center](#) and campus networks." The AOC they produce are immune to the electromagnetic fields.

As you can see from the companies public statement. They claim they "produce AOC that are immune to the electromagnetic fields." Why would they need to make products immune to electromagnetic fields if the

electromagnetic fields surrounding us don't harm us like the narrative says.

Make that make sense if none of these networks need to be regulated because they don't harm or inflict any damage to the human body!

Look at these line items:

- **Network + Interop** is a place you can get "unbiased education for IT pro's" Both these line items fall under different sections of the cipher. Although, both are connected to the corporate goals that are connected to computer networks, that are connected into the electromagnetic system, it's a part of the cipher that can alert people to the rising and falling of stocks, where they are in their corporate goals, and more. It's more white-collar laborers and it's reserved for the "cliquish" types.

Knowing the specifics of these companies and products can be important for whatever reason people find it important. I mean, when people learn Don's directions include the stock exchange, what will they do to understand it? Most will want that information and try and figure it out. A lot of people would love to figure out the stock exchange to continually earn money. There is also a telegraphing structure embedded into the names. A child trafficking network and organ harvesting organization. So, individual line items are there for a reason. The reason isn't as clear until we go line-item to line-item and allocate those line items where they need to go, which is what we have been doing here to make it easy for anyone interested to expand on this system of systems using the key terms list I've included below.

Knowledge is power.

The last couple of line items – there are many like this – they show us a couple of platforms they use, businesses to distribute their items, the items they distribute and the things these people would buy, and then who they're buying them from. This has seemed (to me) to be astronomical amount of information that no surface level thinker would be interested in anyways. However so, that's how technical these directions are. There's a wealth of information at my fingertips.

I think it's wise to understand some specifics. For instance, in a mobile phone - if you have a transceiver assembly and don't have anything else - you aren't going to be able to make a call. There is more than a transceiver assembly in a phone to make up what we know as cell phones. There is also fiber optic-network around us that we don't see. They transmit signals for you to get the calls. As an example. We find them on telephone poles, in

our houses and in our local observatories, fusion centers, and anywhere else they send and receive messages.

Anyhow, fiber optics is “the use of thin flexible fibers of glass or other transparent solids to transmit light signals, chiefly for telecommunications or for internal examination of the body.” ([Search](#))

They’re literally using our bodies electrical system to act as this transceiver.

NANOTECHNOLOGY INSTITUTE...

Locking down airports, restaurants, churches, and whatever else they didn’t run so they could drive out the middle class and kill the lower class? Why were they enhancing the grid simultaneously? Could doing these two things at the same time allow for one of these to go unnoticed? As I’ve said a few times up till now. Don told me about a year and a half prior to COVID19 that they would be using chemical warfare against the people. This chemical bio terrorist situation would be played out in many ways. There are a variety of diseases to be put in food, air, and water using nano-particulates, which is bio-engineering plants and animals.

Two major ones stood out from the beginning.

One was a nerve toxin.

The second one was a snake venom.

It appeared to me these were delivered via a nanostructure that mimicked a parasite. Little did I know. They were going to stage a global pandemic (even though line items like **opportunistic disease** were strategically placed). However, I should have. Especially because I’ve been in the “truth” community for over 15 years and an alien invasion with medical tyranny would be the driving forces to bring in the New World Order globally. Don shows me that nerve damage would be a major factor among the populace. He also shows me a number of other chronological disease patterns would surface.

I didn’t really give it any thought, until more recently, when they developed the newest branch of the military. Space Force is now a new branch of the Air Force. Oddly, in the book, the motto for the Trumps is Per Adra Astra, which is the old motto for the Royal AF...

The pathway to the stars are strewn with pitfalls and dangers... I believe one of those dangers has to do with you finding out what is really happening around you.

This electromagnetic system is the reason for quantum computing, technological advancements, physics, quantum mechanics, atomic physics, atomic manipulation, and the modern medicine being installed this system of systems is a homogeneous system at all points. For instance – atomics deals with molecular structures, lights, energy, and physics. Molecular structures are a part of that same system and are relative to the same attributes, they're just broken down into parts that are indivisible.

This means Rife's work was a result of biologically centered research and development of humans that were studied long enough to prove there was an "end to all disease" using frequencies geared towards the human genome! Can you see it yet?

- **Stanford University** stated in publication on Feb 12, 2020, Researchers show how **electric fields** affect a molecular twist **within light-sensitive proteins**. Well, aint that funny?

All of our body's proteins are sensitive to light. The electric fields caused by the radio waves – electromagnetic field – rf energies – scalar waves – ELF or EMF. They all have their own effect on the molecular structure of our bodies.

These are the things Rife, Fritz, and Naghl knew about. So why when I visit a NASA's website do they say this?

Here are some statements from the [NASA webpage](#):

"Relatively new discoveries are now leading to an expanded understanding of the role of light entering the eye in addition to supporting vision, light has various nonvisual biological effects. Over the past thirty years, animal studies have shown that environmental light is the primary stimulus for regulating circadian rhythms, seasonal cycles, and neuroendocrine responses. As with all photobiological phenomena, the wavelength, intensity, timing and duration of a light stimulus is important in determining its regulatory influence on the circadian and neuroendocrine systems. Initially, the effects of light on rhythms and hormones were observed only in sub-human species. Research over the past decade, however, has confirmed that light entering the eyes of humans is a potent stimulus for controlling physiological rhythms".

NASA said this was “relatively new.” NASA also said they used animals to test this on. You do realize humans are mammals, right?

The webpage on brigtenyourmood - that I shared earlier - has the same freaking jargon that the NASA webpage has! Researching all the linked materials will show you this rhetoric from articles to website. The differences aren't enough to say there is different authors. In fact, it seems to point out – and make very clear – someone is steering the narrative.

Could this be the same totalitarian power over telecom?

NASA is talking about **photobiological phenomena** and how this work is complementary to controlling the body's biological rhythm. The article says, they been 'looking into this for the last 30 years.' Mind you, that would put us into the mid-90s.

Look what else happened in the 90s.

Jerome I Friedman, Henry W. Kendall, Richard E. Taylor received the Nobel Prize in Physics in 1990 “for their pioneering investigations concerning deep inelastic scattering of electrons on protons and bound neutrons, which have been essential importance for the development of the quark model in particle physics.” ([Nobel Prize 90s](#)) A quark is one of the fundamental particles in physics. They join to form hadrons, such as protons and neutrons. Ya know, those things our bodies are made up of?

- [Per the World Health Organization:](#)
 - *“Genomics is the study of the total or part of the genetic or epigenetic sequence information of organisms and attempts to understand the structure and function of these sequences and of downstream biological products. Genomics in health examines the molecular mechanisms and the interplay of this molecular information and health interventions and environmental factors in disease. Human genomics is not the only part of genomics relevant to human health. The human genome interacts with those of a myriad other organisms, including plants, vectors, and pathogens. Genomics is considered across all organisms, as relevant to public health in human populations. In addition to genomics knowledge, we also considers technologies that make use of genomics knowledge. Genomics is distinct from genetics. While genetics is the study of heredity, genomics is defined as the study of genes and their*

functions, and related techniques. The main difference between genomics and genetics is that genetics scrutinizes the functioning and composition of the single gene whereas genomics addresses all genes and their inter relationships in order to identify their combined influence on the growth and development of the organism."

[National Human Genome Research Institute](#) is a branch of the US government. The [World Health Organization](#) (WHO) is a specialized agency of the United Nations responsible for international public health, they all collaborate with one another.

Genetics is the basis of the human genome project.

This would be a part of **atomic physics**, which is the study of the structure of the atom, its energy state, and its interactions with other particles and with electric and magnetic fields. This is a biochemical principle/process at the molecular level - where our chemical and physical properties can be changed.

This time in the news. [Molecular biology has clarified the nature of genes and the sources of variation.](#)

Statistics say: "[The field of molecular biology is set to see a growth in demand over the next 10 years of up to 19%](#), which is much higher than any other industries (except quantum computing/technological advancements are close in proximity).

[Let's look at a few key terms:](#)

You or I do not need to be rocket scientists or have a degree in any of this stuff to understand. How do you think they're cloning animals or trees? They've not only got to identify the properties of two species. But they've got to bond the two energies together.

Talking about the [human genome project](#) in more detail. The genome is the entire set of DNA instructions found within a cell, Consisting of 23 pairs of chromosomes. The DNA is essentially a molecular structure. This DNA structure has been manipulated - as of late - by the mRNA in the vaccine, and if you do some study on it, you will surmise; someone doesn't want the people to get the truth about it.

Did you know you may have given informed [consent to your DNA without even knowing it](#)? Through my own experiences. I know without a shadow of a doubt they've been using these technologies on citizens without their consent.

Look at [Nhanes \(National Center for Health Services\)](#) for instance. The DNA repository has children aged 12+ years. Nhanes III Methodology states:

“DNA was extracted from crude lysates of cell lines created from blood of participants aged 12 years and over.

For NHANES III Phase II (1991-1994), DNA concentrations per sample vary and are estimated to range from 7.5-65 nanograms of DNA per microliter with an average of approximately four micrograms of DNA in 100 µl.”

NHANES 1999-2002, 2007-2012

DNA was purified from whole blood of participants aged 20 years and over. Aliquots of purified DNA were normalized to concentrations of approximately 50 nanograms of DNA per microliter. Do you think they knew about this research when they publicly announced the human genome project?

Look at the titles of these published works:

- ✚ [“advances in genetic and genomic research--in particular, the increasing emergence of large-scale population studies and genomic databases--have challenged traditional conceptions of informed consent”.](#)
- ✚ [“Genetic and genomic research requires access to human DNA from biological specimens, which can be stored and used in multiple research studies. Access to stored biospecimens for genetic and genomic research is critical because understanding genetic variation and its association with common and complex disorders on a genome-wide scale requires large sample sizes to achieve sufficient power “.](#)
- ✚ [“Biospecimens are most useful when linked to clinical and other phenotypic information about the sample source. This has been accomplished in some countries by the creation of national biobanks “.](#)
- ✚ [“In addition to the proliferation of population-based biobanks, many investigators, pharmaceutical companies, and institutions are collecting and storing biological specimens, clinical data, and genetic information in local and regional repositories. “](#)
- ✚ Often, [“cell lines are made so that the specimens can be studied indefinitely, and resulting DNA data are made broadly available for secondary analysis through publicly accessible or restricted databases”.](#)

[“How specimens and data are collected and stored, for how long, by whom, and for what purposes varies tremendously. However, most genetic and genomic research projects share several common features that challenge the established norms of informed consent.](#)

Molecular biology shows through the inception of ideas (related to photonic emissions and atomic manipulation) they've been around for at least 60 years. When you look at the processes and their timelines one can see strategic developments of an already elaborate system. It was in the [50's when James](#)

[Watson and Francis](#) Crick discovered the **double helical** structure of DNA, which means they've had high-speed computational methods for over 70 years.

This is the mRNA platform that seems to be catapulting medicine into another age right now! It's also around the same time the US Businessman pointed out. Actually, if you look at the timelines of all these different agencies. You can see there was a model, a goal, a plan, executed in segments.

You should recall. I told you early on you can say the same thing a few different ways.

This should be widely known - seeing as people are being given artificial intelligence proteins to help the cells learn how to fight C19 - but we know, it isn't. They never told the public this themselves and they censor anyone else who does, which is one reason they tried so hard to stop this work. These systems bulleted above are used to map these sequences, which proves they're not learning or developing any new technology. They're simply awaiting all the right moments to bring it out into the forefront.

Needless to say,

When you introduce nano type artificial cells someone on the outside can send information, or retrieve it as well. In other words. [Molecular communications systems](#) is now in an era where they use the presence or absence of a selected type of molecule to **digitally encode message to enhance the body or to make the body sick**. The molecules are delivered into communications media such as **air** and **water** for transmission using nano cells made of nano-created structures such as proteins. This means whatever they are spraying on us can enter the body via the nostrils or the mouth. Same with water. Whatever they use in the "treatment" facilities can enter when showering, brushing teeth, or drinking anything with tap water. This is what they are doing using the mRNA protein found in the Covid vaccine. John Hopkins says they tested mRNA on mice in the 90s. The biggest problem they had was getting it into the body and the body not receiving the message the RNA carried before it was expelled from the body. So they found a way to make it look like RNA our body already produces. They basically learned how to trick the bodies atomic structure using a nano cell made to look exactly like that atomic structure.

It is a fact, at the atomic level, [we are a bunch of molecules and atoms](#). We proved that early on. The line items in Don's directions pointed out all these highlighted and bolded key terms. This gives us a vast array of evidence suggesting molecular biology has been used for quite a long time and is no longer in the research/development stage. Rather it is in the we are implementing it globally stage. But we don't want the world to know the truth about it. Tell me that doesn't speak volumes.

At the lowest point is the bottom. Feynman knew then what they were wanting to do which is why he spoke the words he chose at that lecture they called "prophetic."

It was a plan. It has always been the plan.

There are a few other marketed gene-editing tools that fall in similar categories of mRNA software of life nano cell. Such as:

Crispr Cas9 first described as a gene-editing tool in 2012,

There are several available tools for gene editing, all of which use enzymes that act on DNA called nucleases. They all act in a similar way. "The enzyme is directed to a specific target site in the genome by either a guide sequence or by specific DNA binding domains within the nuclease itself." (SYNTHEGO on telegram) Essentially, once the gene editing tool breaks the DNA the nano cell can be used to repair the break via a process called "non-homologous end joining (NHEJ)." Once the gene editing tool gets to its destination. It begins to change the organism's genetic code. (TELEGRAM LINK) In laymen's terms, light can cause the atomic structure to twist and change shape and it can cause DNA breaks, then change the atomic structure through atomic manipulation using quantum mechanics and frequencies. It can receive data, perform an action, and change the mathematical properties of the cells data.

Think about the bottom. At the lowest point - in a molecular system - (such as our bodies) we can find **DARPA's [SMART DUST fits the bill](#). This is something I believe was implanted in my nose when I was kidnapped off the second floor of my dad's house and brought back severely injured, btw.**

The author of [dissidentvoice.org](#) explains for us in this must read article: "[Smart Dust is comprised of "many small wireless microelectromechanical systems \(MEMS\)](#). MEMS are tiny devices that have cameras, sensors, and

communication mechanisms to transmit the data to be stored and processed further. They generally range from 20 micrometers up to a millimeter in size. They are usually connected to a computer network wirelessly and are distributed over a specific area to accomplish tasks, usually sensing through RFID (radio-frequency identification) technology. The prototype smart dust currently measures 0.8 millimeters x 3 millimeters x 1 millimeter can be only 1 cubic millimeter or less in size — possibly as small as 100 microns per side.”

It’s also known as “[neural dust](#)” which “represents a radical departure from the traditional approach of using radio waves for wireless communication with implanted devices,” said [Doug Weber, a DARPA program manager](#). “Neural “Smart” Dust Connects Brain and Computer and is “wireless mind control”. The "smart dust" in this instance is supposedly about brain mapping. An example would be using small nano-sensors that are injected into the bloodstream to map the brain.

Remember this, “Small nano-sensors that are injected into the bloodstream to map the brain.”

[DNA computing.](#)

Molecular communications is a result of biological communication mechanisms that proved to be useful in science and engineering.

[By addressing a series of mathematical and computational problems](#) with [molecule-based information encoding](#) and processing, [Molecular Informatics](#) ([which is an international forum for publications on technological advancements](#)) ([here](#)) says they are aiming to discover (and define) [future opportunities](#) for molecules in [information storage](#) and [processing](#).

Mathematics has maximal impact on molecular/cellular biology and medicine via the feedback loop of interaction: mathematical models are built in response to unsolved problems and experimental/clinical results; the theory is converted into algorithms for [machine computation](#); *computations and theory are used to make predictions and analyze experimental data*; results of this analysis are used to refine the theory and computation,” gather knowledge of history, or create what the future may look like.

[ALGORITHMS and computing terms IN DONS DIRECTIONS](#)

Key terms:

- Transformation mathematics
- Pico- (10^{-12} , SI Prefix)
- Peta- (10^{15})
- Polynomial (Complexity Theory)

As an important piece of knowledge to have here relates to your body. Each one of our bodies has a natural way of communicating within its cells. If you interrupt that communication, you can cause a negative or a positive effect. If you interrupt that communication using an artificially created non- or cell-scale entities (such as a patented virus) your body will send signals to itself. We just learned. They have your genetic code on file. They are easily able to obtain that at birth. Those signals are specific to you. They would fight in you for you to push out any substance that is foreign. If you take a pill for a condition, like sleeping for instance, you will change the molecular structure within you by introducing molecules composed of chemical signals that aim to combat that molecular issue happening within the body.

Look at the smart watches that are using some form of molecular communication systems measuring the energy output from the biological processes of the person wearing that technological device. How are they computing your molecular structures and chemical signals with a watch - and can't do it in a laboratory setting - to measure your blood pressure or A1c?

Right now. Technology on the market tells us. Smart watches can count your steps, take your pulse, tell you your blood oxygen level, and apps can tell you if you have C1919 or not. Video [games can take you out if you die in them](#) and some can just cause neural logical changes in the brain. The narrative – it has got to be developed. The secret – it already is and they're simply awaiting the perfect moment to implement it.

[Computers can already be used to simulate cellular growth, the human nervous system, motor control, disease transmission, and disease progression.](#) All these things are highly useful in biological and medical research. These are only a few of the many ways that computers can be used in life science. Professionals publicly state they're trying to tweak

So, if you're researching where they are in molecular communication systems you will be told – by professionals and journalists – they're aiming to discover and define future opportunities for molecules in information storage and processing. This means, they say, they do not have the proper scientifically engineered system allowing them to store and process information, in molecule-based information encoding and processing systems.

This is the same system that has been employed in the pharmaceutical sector for decades. Because they're saying they're looking to develop high-speed analytical methods for sequences in protein synthesis, they are saying the systems they have do not do what they want them to do.

Ah, I went to school for computers. That's not how computers work. Artificial intelligence teaches itself. Everyone who inputs any images or words into the system is merely advancing the system. Because it can correct itself and learn on its own.

Line items saying the same thing:

1. Solid Electrolyte Interface (energy storage)
2. Search Engine Indexer (software)
3. Solid Electrolyte Interface (energy storage)
4. Special Experience Identifier
5. Magneto Optic Storage

[Molecular communications systems](#) use the presence or absence of a selected type of molecule (which is a chemical signal) to **digitally encode messages**. One molecule carries information. The molecules are delivered into **communications media** such as **air** and **water** for transmission. [Springer](#): This

means whatever they are spraying on us can enter the body via the nostrils or the mouth. Same with water. Whatever they use in the “treatment” facilities can enter when showering, brushing teeth, or drinking anything with tap water.

Smart watches: This means that. You have an intelligent system that can compute your digital footprint and give you an output via a smart phone or smart watch because the device can read your digitally encoded message in your biological footprint. Diabetes can be checked – pain free – nowadays. And guess what? Insurance companies will even pay for it.

So... How come they claim to be in development of something that already exists?

Here is where a few different genre’s collide.

Biotechnology is used at the molecular level for a variety of applications, such as the **biaxial polymer**! ([Wiki](#))

DARPA also has interdisciplinary laboratories (some of which are coded into the ciphers pages as well) at **Cornell University**, **Penn University**, and **Northwestern**. then the agency went onto award 9 more contracts around the U.S. – up until 1972 – when the **National Science Foundation (NSF)** took over the program and changed its name to the MRL program (meaning Materials Research Laboratories.) (DARPA) ([Materials studied](#))

As you’ve just heard. Materials science is something DARPA deals with, which came about in the 60s with Arpa, when “they established the field in their first three contracts of the Agency’s interdisciplinary laboratory program (IDL). [Materials studied](#) is the study of stuff, how it behaves, and how it can improve. It was widely recognized around the 1940s as a specific field of science and engineering. Applied in materials science are metals, **polymers, semiconductors**, and **ceramics**. The basis of materials science is studying the interplay between the structure of materials, the processing methods to make that material, and the resulting material properties. ([WIKI](#)) Materials science incorporates elements of physics, chemistry, and engineering. ([WIKI](#)) Material science is basically the manipulation of atoms and molecules to form a structure not otherwise created by natural means.

NASA also has materials science endeavors that’s a sub-topic of their physical sciences program called **microgravity materials** science, which is a discipline that conducts experiments on the **International Space Station** designed to improve our understanding of materials processing and properties. When they understand the

scientific endeavors it's applied to earth-based industrial process in "order to achieve better and/or less expensive materials." (NASA)

Each agency has some dealings in some of the following; **conductors**, **semiconductors**, **polymers and organics**, **glasses and ceramics**, and **granular materials**. (NASA, DARPA)

Key-player in semiconductors are:

- Samsung
- Kyodo-inc
- Resonac
- National Instruments
- Georgia Tech
- Stanford University
- **Planckian** "explores frontiers of energy science by developing quantum batteries, the first technology for energy management powered by quantum mechanics." They combine quantum physics and materials science to shape a future where energy can be handled at unprecedented speed."
- **Seton Hall University** teaches applied physics and engineering. "The program prepares students with the education and professional skills to be essential societal contributors in the 21st century science, technology, engineering and mathematics workforce." They consider their curriculum "carefully crafted" and "designed to meet the demands of modern industry for young researchers – knowledge of advanced **applied physics** blended with engineering fields such as nanoscience and quantum engineering, **renewable energy research**, condensed matter physics, material science, and more.(SHU.EDU)
- **AIP advances** is an "open access, multidisciplinary journal covering all areas of the **physical sciences** – experimental, theoretical, and applied. The inclusive scope and publication standards of AIP advances makes it an essential outlet for scientists across the physical sciences." (pubs.aip.org) Of course educational courses would be a primary factor these days seeing as the final phase of their master plan revolves around these science based applications.
- If we were to ask what is the importance/relevance of material science in the field of electronics engineering we would learn materials science is what allows one to make the electronics in the first place. Knowledge of **crystalline materials** and how they **conduct electricity** is part of the fundamentals to understanding how electronics works. Solid state physics is often the name of

course where the details of electron behavior in materials is studied, but it's a subset of materials science not a different topic. Defects in crystal structures interfere with electronics performance and you learn how to grow crystals that are as perfect as possible that enable the electronics to be made. Manufacturing the circuits, the packaging of the chips, the thermal management and the materials involved in all of that is materials science. Metals ceramics and polymers are all studied in materials science and are found in all electronics. Electronics is not just about conductors like copper but also resistor and capacitor materials like carbon thin films, mica, tantalum, and nanotubes. Then there are the semiconductors and insulators made from polymers and ceramics and glasses that let the circuits do their job. The rest of electronics engineering is designing circuits and assembling circuits from components all made from materials designed by materials scientists to make the electronic devices perform.

- Uranium, Selenium, and Radon are but a few mentions in Don's directions as well. For the sake of simplicity, we will look at [Uranium](#)
- This is a naturally occurring metallic element present in earth's crust. Uranium has 92 protons in its nucleus. The isotope ^{238}U has 146 neutrons, for a total atomic weight of approximately 238, making it the highest atomic weight of any naturally occurring element. Uranium is radioactive and in nature has three primary isotopes with different numbers of neutrons. An unstable nucleus that emits some form of radiation is defined as radioactive. The emitted radiation is called radioactivity, which in this case is ionizing radiation—meaning it can interact with other atoms to create charged atoms known as ions.
- [Radioactive materials are handled by EPA, FDA, NRC, and State Governments](#).

Btw, radioactive materials have recently been found in American towns, just like Don alluded.

Now, I'm not doing specifics, okay? I'm surface-level thinking and sharing here. So, don't go getting all technical about the semantics. It's useless and not relative. I'm telling you. Molecular biology and materials studies are directly related to one another. One would not exist if the other hadn't of been heavily developed. I will show you what I mean.

Molecular biology

- ✚ aids in biologically engineering an organism.
- ✚ Aids in creating organisms or materials.
- ✚ Can recreate an organism *or material* with key properties intertwined with other molecules that aren't found together by nature (or God).

- It is related to life sciences and has a variety of genres currently being employed.

It is recorded that atomic manipulation, such as exoskeleton suits to make someone like Batman or Spiderman, began showing early workings in the 5th century. This work is done at the molecular level. Molecular testing is a broad category of tests that look for molecules in your DNA or other pieces of genetic information called RNA to diagnose or predict your risk of future diseases. These molecules might be genes, proteins, or other biomarkers. Molecular tests have replaced conventional tests in many fields of medicine. It dates back to the 1930s.

[" When light travels from one medium to another, it either bends towards the normal or away from the normal this is called refraction of light. The phenomenon of refraction is mainly attributed to the difference in the speed of light in various mediums. The speed of light depends upon the nature of the medium through which it passes." \(here\)](#)

Light passing through metal or walls painted with lead paint would be different than if it passed through dry wall. The medium would be anything around you, from wool shirts to linen. This is a median. Did you know that biblical text spoke against wearing clothing made of different types of fabric?

- Leviticus 19:19 says, "keep my decrees. Do not mate different kinds of animals. Do not plant your field with two kinds of seed. Do not wear clothing woven of two kinds of materials."
- Deuteronomy 22:9-11 commands "Do not plants to kinds of seed in your vineyard, if you do, not only the crops you plant but also the fruit of the vineyard will be defiled. Do not plow with an ox and a donkey yoked together. Do not wear clothes of wool, and linen, woven together."

Polyester is a medium introduced to the American public in 1951. They say, it was marketed as a "magic" fabric that needed no ironing and was extremely wrinkle resistant. Could this have been one of the first atomic material pieces they employed within their system of systems? Is it possible they implemented this within certain areas where there were electrical lines already in place? Could they have studied this medium on the American people in the 60s? Is the reason the Lord told the people this was because He knew?

Multiple different alphabet agencies and associated organizations or Institutions work with atomic manipulation, they all just have their own part. Some are atomically manipulating minerals. While others are atomically manipulating the human genome.

Radar absorbing materials is a special class of polymer-based material applied to the surface of stealth military aircraft, such as the F-22 Raptor and the F-35 lightning II, to reduce the radar cross-section and thereby make them harder to detect by radar. ([Science Direct, Polymers](#)) This is the aerospace industry! One of the smallest attributes you can identify in this genre! Are you going to tell me this isn't a strategic design? Is it starting to come together for you? Are you putting the pieces together, yet?

Okay, I'm not done explaining either.

-

28 days ago -to the date - the Daily Express reported; '[Cancer is a 'ticking timbomb' for children but pioneering vaccine gives hope](#)'.

- A story in which a little 9-year-old girl named Lottie lives with fear of neuroblastoma coming back. It is documented in this publication. "One in five children who have been treated for neuroblastoma have a one in five risk of it returning." However, because of a "pioneering vaccine" this little girl's family just may have found the cure! Unfortunately, Daily Express doesn't give the experimental vaccination a name. Instead, there is a long story about how they flew to the USA to obtain this 'unknown vaccine' because the UK doesn't offer it! The thing is, I know the vaccine name already, drumroll...
- Because of Don's mysterious directions and the study road that ensued from it.

But let's look at a quick search on the matter. Googling...

What vaccines focused on cancer are on trial?

This search turns up the American Cancer Society report on: [What's New in Neuroblastoma Research?](#)

In this report:

- Genetics of neuroblastomas
- Treatment
- Chemotherapy

- Stem Cell transplants
- Retinoids
- Targeted Drugs
- Immunotherapy
- Anti-GD2 monoclonal antibodies
- Vaccines
- CART-cell therapies

How weird, right? All that found in the cipher I created? Oh, but that doesn't mean anything. Or does it?

Anyhow...

Under [Vaccines](#) it reads:

"Several cancer vaccines are also being studied for use against neuroblastoma. For these vaccines, injections of modified neuroblastoma cells or other substances are given to try to get the child's own immune system to attack cancer cells. **These treatments are still in the early stages of clinical trials.**"

In all of this. We can find. They're using biotechnology to identify and treat neuroblastoma cells. According to [Journal of Clinical Oncology](#): "The molecular biology of neuroblastoma is characterized by somatically acquired genetic events that lead to gene overexpression (oncogenes), gene inactivation (tumor suppressor genes), or alterations in gene expression." ([Springer, Vivien Wang 1, Wei Wu](#))

This calls for the use of MicroRNAs (miRNAs) which "are non-protein-coding small RNA molecules that negatively regulate target messenger RNA through degradation or suppression of protein translation. MiRNAs play important roles in the control of many biologic processes, such as development, differentiation, proliferation, and apoptosis. Increasing evidence shows that aberrant miRNA expression profiles and unique miRNA signaling pathways are present in a variety of cancers. MiRNAs function as oncogenes or tumor suppressors during tumor development and progression. **Experimental evidence demonstrates that correction of specific miRNA alterations using miRNA mimics or antagomirs can normalize the gene regulatory network and signaling pathways, and reverse the phenotype in** cancerous cells." ([Springer, Vivien Wang 1, Wei Wu](#))

Grant it, I'm not a scientist. But you do not need to be one to understand that [mRNA](#) and miRNA is similar. Both are at the atomic level. Both are part of

molecular biology. Both go in and change something to prevent/treat/reverse. I mean, do we really need to know the exactness of each one of these molecular biology components to get a fundamental understanding at the basic level?

Are we all so stupid that we can't see the obviousness of it all pertaining to the human genome, computer science, molecular biology, and biotechnology at the atomic level?

I don't think I am. Nor do I believe that you are either.

Think about the reason why just around two years after the pandemic the UNSW RNA Institute was recently established, and on their [website](#) they say "The RNA technology is "THE SOFTWARE OF LIFE".

Did you catch that whammy? The Ribonucleic acid is a technology! I'm not reaching. I'm not adding conjecture. I'm pointing out that which is hidden and showing you there is no other reason to hide these things unless what I'm saying about what Don shows me is true. Let's look at an excerpt from their website.

- "For all the tantalizing (they misspelled that not me) potential of RNA science, the progress has been stymied by a bottleneck of scale and, formerly, cohesion. The wealth of RNA expertise in NSW – represented by its talent and facilities – has been kept separate by the physical boundaries of research institutions and the more abstract boundaries of research discipline. And this is where we find the UNSW RNA institute".

It has been "kept separate by the physical boundaries of research institutions and the more abstract boundaries of research discipline." It's interesting how they tell us without telling us. Abstract means it exists in thought or an idea, there is no real concrete or physical existence. So they're telling us that people had thought about the concept, yet the concept did not exist until now because of research discipline. Discipline is the practice of training people. It's a branch of knowledge that's typically studied in higher education. I think the 'higher educated' people like spelling words differently than the rest of us. I bet they believe it 'sets them apart.' How stuck up and egotistical would that be?

Karen can't spell, but thinks she is better than the rest of us. Ah Ha! Go figure.

Okay, Okay... My bad.

I just couldn't help myself. It was so 'tantalising' (hand on face)

(I like the z more, btw).

[Medicinelineplus.com](https://www.medicinelineplus.com) states: "DNA, or deoxyribonucleic acid, is the hereditary material in humans and almost all other organisms. Nearly every cell in a person's body has the same DNA. Most DNA is located in the cell nucleus (where it is called **nuclear DNA**), but a small amount of DNA can also be found in the mitochondria (where it is called [mitochondrial DNA](#) or mtDNA)."

Cells were found in 1660 by Robert Hooke, who found them by looking into a microscope at a corkscrew. His finding tells us that not all cells have DNA.

Let's consider the DNA being a genetic code. If they could put a foreign substance into the body, can't they change the genetic code? Isn't that what they're doing with the manufactured protein they're trying to force everyone to take?

"[DARPA launched](#) the [Safe Genes program](#) in 2017 to establish a "safety by design" strategy for guiding the development of an array of powerful, emergent genome editing technologies." [Darpa's website reads](#): "During the first phase of Safe Genes, we focused on ground truth, technological foundations, and early proofs of concept to determine which research pathways show the most promise," said Renee Wegrzyn, the Safe Genes program manager. "The remaining Safe Genes teams are spearheading unique approaches that support development of a layered, modular, adaptable solution set."

It is said, "The genes in DNA encode protein molecules, which are the "workhorses" of the cell, carrying out all the functions necessary for life."

"What are proteins?"

Proteins are a primal [link in molecular biology](#) and is a biochemical marker that's the center of attention among industry leaders due to the pandemic. Well, that's what the news reports say. When we are done here, you may see this is just another part of the "fake news" Trump kept pointing out during his administration. They want every human to get the shot so this artificially created nano-cell could become the workhorse of our cells? Why does that not sound as if its to help keep me healthy?

Just like the protein is associated with the DNA, the data from these different physics/biochemical processes are associated. These different processes are all compartmentalized for a reason. The left hand never knows what the right hand is doing. So if I'm just researching and developing something to kill this little bug inside of a genome how would I know if that specific bug was or wasn't planted by an outside source unless it was introduced to me?

In 1962 a Spanish neuroscientist Jose' Manuel Rodriguez Delgado took a hand-held radio transmitter and transmitted a signal to an implant that was planted in a bulls brain to demonstrate how they could suppress deviant behavior to achieve a "psychocivilized society."

As I write this, Israel is under attack by HAMAS terrorists. This event is one of many that will cause humanity to cry out in need of a savior. Their answer will be related to this very topic of mind control. Imagine a world where terrorists can no reign because they've been subdued by the neuralink implant or given the VMAT2.

Laser beams, ultrasounds, electromagnetic pulses, mind altering and direct current stimulations and other methods have interested mad scientists for decades. However, it was put on the backburner because there were plenty of people who opposed the idea. Now, people like Elon Musk and Mark Zuckerberg are pouring millions of dollars into the development of brain-computer interface (all of which has been created, which is why neuralink exists). ([Quantum Mag.](#))

[Boston University Arts & Sciences writing program](#) brings to life the part-human part-animal aspect that's been touted as been a way to create new lungs, kidneys, and whatever else they can think of in genetic engineering to combat illness, help people live healthier and longer lives, and even make them semi-superhuman. The funny thing is. According to Don, the infrastructure is already in place. They've begun making that aspect a reality.

Quite frankly, this is the "room at the bottom" Feynman talked about in the prophetic lecture quoted a few pages back. It was in 1959 that they began publicly talking about exploring and manipulating materials at the atomic level. Just a decade prior to NASA going to the moon. Physics models aren't necessary without being able to manipulate atomic structures; like minerals, human, or animal cells. It doesn't matter what atomic structure. They're atomic structures that needed to be manipulated or reproduced, and this topic of matter was developed in the 5th century!

[Bio-electromagnetics, also known as bio-electromagnetism](#), is the study of the interaction between electromagnetic fields and biological entities. We are biological entities. Are you beginning to see how I can continuously say the same freaking thing using different words? Are you going to tell me that wasn't by design?

1. Might I ask you. If none of my conspiratorial claims are true. How come you have 5 different ways to say the same exact things? Who was able to create that?

Nano-cells or smart dust is the smaller 'minor' system - just like the mRNA is. You heard Moderna themselves say they wanted a 'plug and play' molecular structure and mRNA fits the boot. It's software that runs just like a computer. It can send and retrieve information. Well tell me something. What system is the mRNA plugging into? Who is going to receive the information packets and send some too? Where is that system? Wouldn't it have to be in place for them to be implementing it globally since 2019?

Relative Line items:

- **Bio 2.0** is an international journal that looks into the origin of life. It is said, "all traces of an organisms origin have been erased." They aim to create life, which they claim will take a significant investment. They aim to build a protocell using one of the unifying tools they have come to know as synthetic DNA. This new English language blog network is a brand-new home for **nature network** bloggers.
- Ancestral time travel is essentially is 'molecular time travel' to recreate evolution of complexity. Most everything living cells do is carried out by "molecular machines." A team of scientists from the University of Chicago and the University of Oregon demonstrated how a few small, "high-probability mutations increased the complexity of a molecular machine more than 800 million years ago." (News UOC) In laymen's terms, the team was able to conclude that our proteins have lost some of the "ring proteins." Essentially. This just means our molecular structures have degenerated over the course of all these years. The point here is to show that researchers are using computational modeling to help design past genetics and different drugs (that are said to be the safest for patients and the least likely to have horrible side effects.) ([NIBIB](#))
- So they use computers to simulate and study complex systems using mathematics, physics and computer science. A computational model contains numerous variables that characterize the system being studied. Simulation is done by adjusting the variables alone or in combination and observing the outcomes." ([NIBIB](#))

Pleides Neo is the new optical 30cm resolution constellation that's funded, manufactured, and owned by Airbus. This allows them to see the earth with extremely accurate resolution and geolocation. (Pleides Neo) So they can triangulate a target easy. It's written on DARPA's webpage:

“in a target-dense environment, the adversary has the advantage of using sophisticated decoys and background traffic to degrade the effectiveness of existing automatic target recognition.”

Nowadays, you can hold your phone and it reads your blood oxygen levels. This makes target identification easy. If they wanted to change my genome all they would need to do is use their sophisticated technology they have in the air and triangulate my location. Then do whatever science coding they need to obtain their desired results. Real-world applications are found in the health sector. Something about NASA systems is completely 'off' and I will point it out over and over until my point is made and driven home. You must understand how vital it is to see the lies around the narrative. Without the truth you can't quite possibly understand anything about this world around you.

You see According to Don, the only ones benefiting are the top families. The top thirteen illuminati ones and this will make itself clear on its' own, using their own operations, public omissions, and whatever else we can find. And the systems they're using over us – in the air – are being used the same way they would be in a laboratory. You see, earth is a closed system. They can't leave the firmament

Landsat 8 was launched back in 2013. It's a satellite that allows scientists to look at earth changes.. Those satellites can give us data on earth land surfaces, using different bands. To give a mental picture. When reading this book on a computer. You see what's called reflected energy. A computer sees it in three channels: red, green, blue. Computers and these satellites allow people to view the world in the eyes of a human, goldfish, and a bumblebee at the same time using **multispectral** and **hyperspectral sensors**.

It's a part of the Universe of things that's used in the fields of **agriculture, oil and gas production, atmospheric studies, mineral exploration**, to map invasive species, and hundreds of other applications. Matter of fact, **multispectral imaging** captures data within specific wavelength ranges across the electromagnetic spectrum and was originally developed for military **target identification and reconnaissance**. Friends, I can assure you. They fly over low and use something to identify me wherever I go. With this being said, umm...

I guess it could read your thermal footprint. Idk, but this system has also found great practical use in document and painting analysis. (WIKI) It's also considered a thermal imaging method. It is said that "every material has an infrared signature that aids in the identification of the object." Essentially,

satellites can view your thermal footprint. Solar panels can help them to get a clearer and more exact picture of it.

AIRBUS is leading the way in A.I.. Airbus has (AI) artificial intelligence that's "much more than a research field: it is a **ubiquitous future technology with the potential to redefine all areas of society**. At Airbus," they "believe AI is key competitive advantage that enables them to *capitalize on the value of our data*.

Notice they said it's present, appearing, or found everywhere (ubiquitous) future technology with the potential to REDEFINE all areas of society. This is what is happening folks. And how they're doing it is absolutely astounding.

" NASA is said to have the AI-based robotic assistant that has cameras, sensors, microphones, that can hear – see – and process information. Plus, they can fly and speak. (TELEGRAM)

CIMON-2 (crew interactive mobile companion) makes its successful debut on the ISS in 2019. This little artificially intelligent bot can assess astronauts' emotional states. Just like our phones can tell us our heart rate. Whyhow the robot was developed by **European aerospace company Airbus** on behalf of the **German Space Agency DLR**, and it employs **IBM's Watson System**. (TELEGRAM, Googele notes).

Did you know the universe we see in pictures is faked? ([Forbes](#)) According to an astrophysicist photograph publisher, he said he faked pictures of for NASA and none of them are real! I will try and include his name in the resource section. But, if this were the truth, what really would they be using these satellites for? Why would they claim to be using them to view the solar system and other planets? Why would they claim to scout Mars? There are so many questions. What would the secret be?

Don shows me. You are the secret. We are the secret. Not to mention, my testimony involves a NASA related aerospace contractor named Don Ashford. He is out of Fort Lauderdale, Florida.

Anyhow, the first documented record of systematic astronomical observations dates to the Assyro-Babylonians, which I'm told through a simple search that was around 1000 BCE. Whatever the true history is. It's not what the narrative says.

The book of Enoch talks about this. Enoch disclosed how Semjaza and a couple hundred other angels taught charms, root cuttings, enchantments, Azazel

taught how to make swords, and knives, and shields, and breastplates, and made known to them the metals of the earth and the art of working with them, and bracelets, and ornaments, and the use of antimony, and the beautifying of the eye-lids and all kinds of costly stones, and all coloring tinctures. And there arose much godlessness, Armarose taught the resolving of enchantments, Ezeqeel the knowledge of the clouds, and so much more. Cutting roots and tinctures would be messing with atomic orbitals to mix and make a medicine. Of course, it's far more advanced now than it was then. However, it existed long ago. None of this was just developed – like the narrative wants us to believe.

Don and history, tells me. NASA isn't the pioneers to anything. Although, they do pretend to be. In fact, Don shows me something nefarious happening behind the scenes instead. This may not seem relevant but NASA's name in Hebrew means liar. Let me be honest and tell you now. NASA is either involved in organ harvesting, trafficking drugs and children – by covering people's tracks via satellite control (say to shut down street cameras), or NASA is using this stuff to poison people and hit them with frequencies that come from the satellites. They are NOT going to no moon people. If the internet hasn't been fully scrubbed by now you would be able to find the truth on it. The boots from the moon landing that's on the cover of magazines back in the 70s are not the same as in the museum. The prints do not match one another. The challenger team is alive living as their own twins. The list is long and it's infuriating to have been hunted, and know their presence has been around my life, in a way that's completely unconstitutional, treasonous, and more.

The professionals have been quoted as saying, "researchers are becoming more interested in the electrical principles of the body," is in direct relationship to this.

Listen to what Ali says in the article:

"A team of scientists from the Department of Energy's SLAC National Accelerator Laboratory and Stanford University has gained insight into how electric fields affect the way energy from light drives molecular motion and **transformation in a protein commonly used in biological imaging**. A better understanding of this phenomenon, which is crucial to many processes that occur in biological systems and materials, could enable researchers to finely tune a system's properties to harness these effects, for instance using light to control neurons in the brain. Their findings were published in [Science](#), in January."

“Using light to control neurons in the brain using energy from light that drives molecular motion and transformation in a protein? This reminds me of the Stanford University quote about electrical fields affecting a molecular twist in light sensitive proteins! How are these electric fields that are affecting molecular twists found in the bodies proteins when it comes to COVID? How are they identifying them and sending or retrieving information on tens of millions of people? If I understand what she just said. Then all of what we have around us can have an effect on our bodies.

- Light and atoms have a strange relationship. You see, when light falls onto an atom, the oscillations of the electromagnetic wave cause the electron to move or swing back and forth at a regular speed, and the atom absorbs the energy of the light. If the atom interacts with other atoms, it can pass the **photon energy**, and when an atom absorbs a photon of visible light, the energy of that photon can excite one of the atom's electrons to a **higher energy** level, and this is known as a transition.
- This puts me in mind of the key term “photoisomerization” that we looked at earlier. I mentioned how it made me believe light can cause changes in the body. This further verifies that thought.

Did you know some counter tops can be radioactive?

Energy terms (not limited to these)

- Protective earth (electrical units safety measure)
- Pulse engineering
- Perceptual Energy
- Potential Earth(earth Groundpoint in an electrical circuit)
- Parasite energy

Oh my! Let me get this right. Did the Department of Energy just tell us that the particle physics laboratory was used to help them control the human bodies molecular structure? Does this mean the mRNA protein could be used to find a way to control people's neurons in the brain?

Nanoscale materials - in Laymen's terms - are the same as what the human body is made up of. They fit together like a glove fits a hand.

- **Spectroscopy** is a tool to study of how different forms of electromagnetic radiation interacts with atoms and molecules. There are various types of [spectroscopy](#) that depends on the frequency of light being used.

- **Spectroscopy** is also related to C19-19 testing. As we can see in this pubmed publication: [A simple and fast spectroscopy-based technique: C19-19 diagnosis.](#)
- Spectroscopy has been around since the 1860s and documented as being a product of the work of the German physicist's Robert Bunsen and Gustav Kirchhoff. (WIKI) How did they have it in the late 1800s if they didn't develop it until way after Rife? Are you seeing how the timeline makes no sense?
- This work later advanced into more elaborate systems such as photography and the relationship of light absorption and concentration. (WIKI) So they had these testing systems early on. Why do they keep saying otherwise?
- Dude! They just told us that spectroscopy was around since before photography! How do we ignore that?
- Computers can operate without biological processes, but biological processes can't be changed or controlled without some sort of input. For instance: the Firefly Luciferase mRNA is 1921 nucleotides and expresses luciferase protein which is initially extracted from firefly *Photinus pyralis*. This is the reason it emits light. It is a "frequently used **bioluminescent reporter** for gene regulation and function study. It is applicable in assays for **gene** expression, **cell viability**, and in vivo imaging, etc."
- "[Luciferase Immunoprecipitation System \(LIPS\) assay is a rapid, simple, and sensitive test to detect antibody response to respiratory syncytial virus](#)"

A primal part of C19-19; An assay is an investigative procedure in *laboratory medicine*, **mining**, pharmacology, **environmental biology**, **and molecular biology** for qualitatively assessing or quantitatively measuring the presence, amount, or functional activity of a **target entity**. (Wikipedia) "[Most assays are based on the Luciferase reaction](#)". This reaction they're talking about causes people's blood to glow in blue light. If you got the shot. They would see it in your veins via shining a blue light on you.

Molecular spectroscopy relates to the **interactions between molecules and electromagnetic radiation**. Electromagnetic radiation is a form of radiation in which the electric and magnetic fields simultaneously vary. One well known *example of electromagnetic radiation is visible light*." (Libretexts.org)

As I previously said, **Molecular communication** uses molecules (i.e., **chemical signals**) as an information carrier and allows biologically- and artificially created nano- or cell-scale entities *to communicate over a short distance*. (Springer):

- **Defense Sciences Office** is also birthed from DARPA and works to identify and pursue high-risk, high-payoff research initiatives across a broad spectrum of science and engineering disciplines and transforms them into important, new game-changing technologies for U.S. national security. One of DSO's current investments is in **ACCELERATED MOLECULAR DISCOVERY (AMD)**. DARPA has been known to create more than 1600 molecules.

These new 'game-changing technologies' would fall under the new technology initiative set forth by the federal government. It would also be a bridge between China and their related government counterparts.

The computational aspect of molecules. How are they processing them? How are they creating 1600 molecular structures if they don't have the proper tools to scientifically calculate their genetic make-up? After all, these different science-based disciplines need to have an assigned mathematical value to compute atomic changes (via different wavelengths that we see as colors) and a system to do it with. How else do they log the human genome? Of course, there are specifics. The specifics would have their own attributes or subatomic particles to identify each layer and everything within that layer. Thereby, making each aspect differ one from another. But if I said, a cancer patient is being treated with molecular biology targeting specific genes within the DNA to teach them how to fight off the cancer. I wouldn't be lying. Although, it's generalized and you can tell that I've no darn educational background in any of that to take anything I say seriously. It's more than not specific. It's uneducated and too general to take seriously. However so, the basics are factual. Molecular biology is being used to combat cancer. This side of molecular biology has been kept away from others for a really good reason. Unfortunately, the idea of revamping the entire healthcare system didn't dawn on people. Now that healthcare workers are fighting back against tyrannical measures with COVID19 it's becoming more evident.

- Over the years, in the medical industry, there have been some amazing achievements which would do well to know about before moving onto anything else.
 - 1885 August Weismann, a German evolutionary biologist professor of zoology and comparative anatomy at the University of Freiberg, theorized that the genetic information of a cell would diminish as the cell went through differentiation ([WIKI](#))
 - 1901—Hans Spemann split a 2-cell newt embryo into two parts, resulting in the development of two complete larvae. ([PDF](#), [the embryo project](#))
 - 1902—German embryologist Hans Spemann split a 2-celled salamander embryo and each cell grew to adulthood, providing proof that early embryo cells carry necessary genetic information. He is known as 'the father of cloning'.
 - 1962 – [South African frogs were cloned by Biologist John Gurdon](#)
 - 1963—Biologist J.B.S. Haldane coined the term "clone" in a speech entitled "Biological Possibilities for the Human Species of the Next Ten-Thousand Years." He established human gene maps and was the author

or “primordial soup theory” ([WIKI, Science](#)) He also was the first to suggest in vitro fertilization.

- 1966 Heinrich Matthaei and Marshall Nirenberg broke the genetic code. ([Science History](#)). (Science History) How did they break the genetic code in 1966 and fifty years later they're still looking to find high-speed methods for sequencing? How did they break the genetic code not understanding it fully? How did they clone in the early 1900s? I mean, make it make sense! They knew the genetic code for rats, mice, and all that other b.s.

Are you really going to tell me they didn't have this system back in the 30s when Dr. Rife was healing people of cancer?

Right, they're just now developing high-speed analytical methods because they need them so badly. Since everyone is getting sick from a mutation of SARS); sure... I can't believe after reading all of this anyone would still believe that. However, I probably should keep in mind that I've seen everything in the cipher and you the reader has not.

On another really important note, an assay is not only used in **laboratory medicine**, it is also used in mining.

Let me quickly switch the topic back to a previous one and then back to this. That way we are able to see connections not otherwise really evident. You should already know DNA is necessary for the inception of life!

Why has the birthrate dropped? Is it possible Bill Gates and teams “got it right?” After all, he did say. If we do a good job with vaccines we could lower the population...

Would you take a vaccine, or give one to your children, that would take their decision to have kids away from them? After all, we know the human genome can be changed using molecular communication systems.

- A current [Springer report says](#), “**Molecular communication** uses molecules (i.e., chemical signals) as an information carrier and allows biologically- and artificially-created nano- or cell-scale entities to communicate over a short distance.”
- Let's say all this in Laymen's terms. I'm no medical professional. So I want to understand it. I can use an artificially created cell that looks like a molecule. Then I can take that molecule, put it into a biological entity and communicate with it. Well, heck. That's the software of life technology; called mRNA.
- This just means, [scientists can manipulate atoms and molecules](#). I mean, this is what they're doing at DARPA, NASA, and their associated interdisciplinary institutions like **Fischer Scientific**. The Human Genome project is related to DARPA disciplines. But in a different branch among many other key-players in the global arena who are pushing forward in the medical revolutions.

- Don calls this revolutionary form of medicine part of the **National Technology Initiative**. There are a number of ways they're employing the different technologies that's a part of the same system. They're prepping people to believe they will be able to find and stop hereditary diseases or viruses before they ever happen, which is why genomic information is so important to our health. But genomics isn't the only part of this vast system using the same sort of technologies.

"In each hemisphere there are three cells (Hadley cell, Ferrel cell, and Polar cell) in which air circulates through the entire depth of the troposphere. The troposphere is the anem given to the vertical extent of the atmosphere from the surface. It is the part of the atmosphere where most of the weather takes place." (Metoffice)

According to Don I can put synthetic molecules in food and distribute it. They can track the distribution of it via the radar systems. I can also spray it all over us and track who has encountered it via the radars as well. Remember, DARPA said the biggest challenge they had was the weather? Well, as I said earlier, the weather is no longer natural at all.

Atomic structures act as a sort of a "**signature for nuclear forensics and archaeology**."

For instance, archaeologists re-create history using old cells - living cells. How this is done is by mapping the atomic structure to find out the color of hair and personality traits the ancient ones had using scientific computing. Policing also messes with the atomic structures of people to identify victims or find the victimizer. Rape kits swab ladies to identify the perpetrator and identify if there's any severe damage to the victim.

DARPA researchers employ it to create materials that will help a soldier in the battlefield. The point here. It's widely used in many applications. All of these systems employed in these different arenas are still the same. And they come from one source. The beast system. A.i is the future. iROBOT was nothing more than a pre-cursor. They were trying to make us all ready. They built the narrative. All the cartoons of SheRa and Heman. They were strategic. All the marvel figures. It's a form of social conditioning. What were they trying to condition us to believe? We all can be superheros!

In the meantime, organizations like the **Alberta Speleological Society** is acting as an agent to secret stuff (ASS) involved in caving. They publicly claim to promote the conservation of physical and biological features with caves, to preserve them in their natural state and to foster within the general public and appreciation of caves as a valuable natural resource. I see Don telling me they're involved in more nefarious activities. I will save you from the gore. However, if you want to know more. Find out what people have been saying about the children below our feet. Anyhow, to keep this scientific. Speleology and karst geomorphology "make contributions to the evolution of

landscapes, thanks to more refined techniques, more specialized and advanced instruments.” They are capable of doing more intensive study of caves and the karst terrains.

- **Nanotopography**: [Science direct](#) says, “the nano topography of a surface plays a significant role in **cell behavior**.” In this science direct article. It is said, “further improvements in **controlling material structures** at the **nanometer scale** may make it possible to one day lay out an exact “road map” to **control cell behavior**.” This means they’re trying to control humanities cell behavior using the mRNA vaccines. Why would they want to do any of this if they were only concerned with the people’s health?

I should slide in here. “Flexi says: There are around 500 billion tons of cells in Earth’s total **biomass**. Average cell density is around 700 quadrillion cells per ton of biomass. Thus, there are an estimated 3.5×10^{31} (to the 31st power) cells on earth.” ()

Nanotopography refers to specific surface features which form or are generated at the nanoscopic scale. While the term can be used to describe a broad range of applications ranging from integrated circuits to **microfluidics**, in practice it typically applied to sub-micron textured surfaces as used in **biomaterials research**. (WIKI Nano topography)

The primary types of topographic changes of the cells on earth results from human geomorphic activity such as surface mining, road construction, urban development, dam construction, and landfills. (USGS)

Mind you...

Molecular biology is found in a wide array of organizations:

- + archaeology,
- + physics,
- + science,
- + biochemistry,
- + biotech,
- + genomics,
- + cosmetics,
- + consumer products,
- + agriculture,
- + environmental technologies,
- + energy departments,
- + and defense.

Important topics in Molecular Biology are as follows and not limited to this list.

- + cell division,

- + DNA cloning,
- + Gene Regulation,
- + Molecular Basis of inheritance,
- + mutations.
- + Structure of RNA,
- + Regulation of transcription in prokaryotes,
- + description of genes,
- + recombinant DNA technology,
- + central dogma,
- + DNA structure,
- + [Difference Between Prokaryotic And Eukaryotic Transcription](#),
- + transcription of genes,
- + polymerase chain reaction, and not limited to these topics. ([BYJUS](#))

You can change the topography of the earth's surface and the topography of someone's molecular structure or genetic makeup. The ASS stated they were making "contributions to the evolution of the landscape."

Are you aware of the sinkholes, water missing from locations like the Colorado river, landmass changes, liquefaction, water popping up in the desert? What about Atlantis? You ever heard of that?

Scanning tunneling microscope is primarily for imaging. It has been used to explore a variation of things related to nano-structures. Several surfaces have been studied with the STM. The arrangement of individual atoms on the metal surfaces of gold, platinum, nickel, and copper have all been accurately documented. Things such as oxygen and epitaxial growth of gold on gold, silver on gold, and nickel on gold have also been examined in detail. This tells me there are more than one applications that can be studied using STM.

Archeologists and biologists alike working on the molecular genetics of historical machines (whether it be man or rock) and telling us their findings using these computation methods. It's the same thing that Molecular Informatics is claiming to be in the process of developing. In fact, they're currently using these computational [methods to predict ecological endpoints](#), which is basically the study of toxic chemical effects on biological organisms (such as plants and people). This combines two fields; Toxicology and **ecology**. Let's cover some more ground before we get into any details on this subject matter.

- o [Computers being used to simulate cellular growth is just like Tiktok's ability to make you younger, or old crime scenes can be recreated in the field of defense; the systems are similar](#), the human nervous system, motor control, **disease transmission**, and disease progression is being targeted and changed. All these things are highly

useful in biological and medical research, history recreation, social adaptation (via fun and useful applications), and policing (to catch a criminal). It's all rolling out at the same time. These are **life sciences** and **defensive security**.

Don't forget COVID initiated the **Nations' Defense System**.

- [Computers being used to simulate cellular growth is just like Tiktok's ability to make you younger, or old crime scenes can be recreated in the field of defense: the systems are similar](#), the human nervous system, motor control, **disease transmission**, and disease progression is being targeted and changed. All these things are highly useful in biological and medical research, history recreation, social adaptation (via fun and useful applications), and policing (to catch a criminal). It's all rolling out at the same time. These are **life sciences** and **defensive security**.

Don't forget COVID initiated the Nations' Defense System.

Here are a few key terms related to this advanced, global, network, communications technology system.

- Anthem Technology systems
- Systems Network Operations Center (Gemini Communication Limited, Chennai, India)
- Advanced technology & services France
- Information technology networking
- Technology transition
- Radiocommunications Agency (within DTI)
- Network implementation
- Network Industry (frequent in company description of the new economy)
- Technology utilization
- Communications and public relations (Australia)
- Communication processor

They must connect every sector to one another. Nightingale health systems would be connected with the banking systems using artificial intelligence. This is why so many people are investing. Now, let's considering the molecular communication system that can be used to manipulate molecular structures via light (we now know this stuff was studied, and applied, then hidden from the people). Advanced microscopes would've needed to have been developed long before this gentleman

Fritz and Rife would've had to have had been an expert in this field. However, Fritz never eludes to learning from Rife in any of the research I've conducted. So, why are the timelines and narratives not matching up? Is it possible the totalitarian power has control over more than just the radio waves? According to my research, they control the school books and even societal trends.

The study of astronomical instruments has been a long-time endeavor - since before any one of us were ever thought about.

Don also alludes to the entire reason the **JPL team** exists is for something more nefarious (such as causing sickness and death (or storms) using physics models and demographics to literally change entire land masses. Like, literally changing the Delta's of the world. It would appear, the contents of the cipher allude to them doing something that causes a negative response. When you look at their website, and see the earth missions they claim to have been on. You can see they say:

"As residents of planet Earth, every one of us benefits from NASA research that has expanded our collective knowledge dramatically. These studies help us learn how Earth's land, oceans, and atmosphere work separately and in concert, and how they directly affect our lives. Armed with sophisticated instruments on the ground, in the seas, in the air, and in space, NASA gathers images and data that help with real-world applications that include developing weather forecasts, climate trends, shipping routes, and disaster recovery plans. For example, because two-thirds of our planet is covered by water, tracking the movement of water is vital to monitoring the health of people and ecosystems. Too much water, or too little, can wreak havoc by leading to floods or droughts." ([here](#))

They say they have "sophisticated technology in the air." It's to control the air and the satellite imagery. If someone pays high enough dollar they can cut a camera off so that the murderer isn't caught. Take heed to the statement made about the residents of planet earth "every one of us" receiving help from NASA research. Yeah, because everyone of us are electrical being's LIGHT BEINGS that can be controlled by light!

Then there is the fact that NASA researched the Delta's of the world. What if I told you it looked like the major secret goal was to transform the landscape of the world changing the water table? That would explain why water is popping up in the desert.

Now look, I believe in the gospel message.

Revelation 6:8 And I looked, and behold a pale horse: and his name that sat on him was death and Hell followed with him. And power was given unto THEM over the fourth part of the earth, to kill with sword, and with hunger, and with death, and with the beasts of the earth

So, I'm talking about THEM who were given power. These are the people. They've taken over. Whether or not you wish to believe or deny.

Look, this isn't God's fault. This is the fault of every human on earth who said take God out of school. We don't want to hear about God. Yeah, you wanted tranny's teaching your children how to "love" m.a.p.s instead. Now, those who chose to ignore the free gift of salvation will get what their hearts desired. You aren't exempt.

NONE OF YOU ARE EXEMPT.

Your bunker will not save you.

Listen. As I wrap this up...

Well, let's jump around a bit more. I see there's organizations working together in certain fields associated with the **Federal Government** who have their job tasks, such as NASA **JPL** (which is why I brought them up) who are supposed to be focused on "exploring the Universe"(just like SETI, who is looking for ETs to communicate with outside of our solar system) and I know it's for major disasters and to control humanity instead.

These two agencies' organizational goals are similar in nature. However, there is a small enough difference to compartmentalize each agency. Don even says the right hand does not know what the left hand is doing.

JPL publicly say they're working to develop "technology to improve life on earth," while they are simultaneously "looking for life outside of the earth's atmosphere," and "creating robots to explore unmanned territories." SETI claims they are trying to locate E.t.'s and communicate with them. And we have developed new branches of the military. Space Force 8...

The only criteria is to be a good liar and even better at keeping secrets – like Buzz and Neil Armstrong and the rest of the crew did.

Creating devices to be effective would be a primary goal of these agencies, which we can see that is the case. They're heavily associated with federal level goals regarding the human genome too. NASA and the Department of Energy work together sharing data and executing operations alongside each

other. And the CDC, **World Nuclear Association**, **W.H.O**, Department of Defense, and so forth would to.

One organization may be supplying scientific evidence, another may be gathering more scientific evidence, while another is developing technology, another a medicine, another working in coding for configuration of implants, or an app. It does not really matter the job tasks. The facts remain, they collaborate with one another. Their work compliments each other and requires interoperability. The only ones who would need to know anything major pertaining to the system as a whole would be the top guy in any one of these agencies. That's what compartmentalization is about. I could work for NASA and never know they're liars because of this. The **MIT team** is also producing technology/software to be deployed by NASA teams. On a hunch, it would seem to me as if people are paid great money to take an invention and pretend like they invented it. This way all cross-sectors are compatible. This means, people (a heck of a lot of people) are involved in nefarious schemes for a heck of a lot of money (which would cause them to want to help hide the secret and go along with the program.) At least this is what the cryptic puzzle of Don's directions painted for me. If I mention some of the upcoming tech advances that Don says would come out prior to it coming out. Would you be app to believing my statements?

Darpa's POWER is all about "aiming to create a [revolutionary power distribution network](#)." The Council of Foreign Relations goes into how the [US Power Grid Works \(here\)](#), and on their website you can find information on the Smart Grid, how the US Grid is regulated, and how greening the grid would affect the climate. No where is it mentioned, how the grid would affect the human body. How strange. Especially because agencies like DARPA are working feverishly to use technology advancements to heal soldiers quicker, or even create super soldiers. I recently saw a video of a soldier being shot twice in the arm and not even flinching. Is it possible he is one already? John Guard Music took the neuralink. He has growing extra limbs. He can even change his eye color and his joints. How is that possible? Through the nanotechnology initiatives?

Sure looks that way to me.

NASA is using the electromagnetic spectrum to study the earth. Not to help people heal? Does their study affect us negatively? How come JPL or SETI completely ignore how the work they're doing would affect the human body?

Go ahead, search all their sites. You will see they are referencing space - those things in the cosmos - and how they can use it to communicate with Et's. How come they don't mention how their studies would affect the human body? Could they be hiding something? Could the Et's they claim to interact with be humanity?

According to Don's mysterious directions. Of course, they are! These last stages of their nefarious plan are very vital! Satan must get people to worship him! He needs these souls "to rise his throne above the stars of EL" (Isaiah 14:11-14)

Space weather isn't something we hear about often. I'm sure that's coincidence and not for any specific reason...

Space weather is not really recognized in mainstream either. Although, it has a significant impact on human health, as changes in magnetic field lead to biological effects. So space weather is affecting the astronauts and it seems to have no affect on the people of the world. Otherwise we would hear more about it and docs would consider such when you go in there sickly, right?

If you recall the University of Basel in Switzerland and the University of Sydney had identified light packets that can communicate with one another and they related it to quantum computing, metrology, and the human. In fact, metrology is the scientific study of measurement. It establishes a common understanding of units. *Did you know the National Institutes of health has a novel method of electromagnetic field measurements of the human brain?* (NCBI, PMC8906554) Do you think that is related to controlling neurons in the brain? Or are they only focused on that because astronauts are living up there and soon so will humanity?

Computed tomography (CT) and **magnetic resonance imaging** produce images of the brain, the brain's chemical reactions produce an electric circuit that generates a magnetic field. Don shows me radiology departments would see technological advancements related to this industry.

Then there is space weather applications. **ESA Space Weather** tells us that we have "passed the maximum of the current 11-years' solar activity cycle # 23. It just so happens to be that 23 is the secret murder club number. I've had first-hand experience with this. So. I'm positive I'm right about that. "Space weather not only affects the functioning of technical systems in space and on the ground but may also endanger the biosphere. The effects of space weather phenomenon are many and varied: they include electronic and power transmission failures, interruptions in telecommunications and navigational systems, hazards to astronauts, aircraft crews and passengers, disruption of oil and gas pipeline, railway traffic, etc. One of the important effects is an influence of the space weather on human health and life, on different biological and physiological systems." The paper goes on to tell us that every time a magnetic storm

happens there's a 75% increase by 1.5 times the number of people hospitalized. There are evidences that the nervous system is a target and/or messenger effecting fluctuation of the geomagnetic field on physiological states of the human. (Space weather influence on Human brain .pdf) If we have a emp and the lights go out, we can blame the aliens.

Do you recall man's drum-shaped earth is at the center of his Universe? For a man to have a drum-shaped earth there would need to be a flat plane inside of a sphere. Have you ever seen the flat earth models? I'd hate to say it. Just because I was never a 'flat-earther'. Ah, how much truth will change a man's perception of reality. Believe it or not, the Philosophers' built their philosophy on this topic. There's a guy named Lucretius who wrote a poem in Latin. He said that words for many concepts did not exist. He was talking in particular about On the Nature of Things, which is "celebrated for its defense of atomism, although the poem never used the word 'atom,' he felt that the world was infinite. He said, if the world had a boundary (or he used the word cosmos) all the falling atoms would collect at the bottom. He also explains how man is in error to think that the earth is at the centre of the Universe, because the Universe is infinite and therefore it can't have a centre. Lucretius was writing in 50s BCE. ([AEON. FLAT EARTH](#))

((there they go with the different spellings again))

Space weather is related to lightening, and it has an incredible effect on the human body. Space weather helps to shape the weather around us too. And the weather around us does cause "changes" to the body.

I've not heard much about space weather throughout my 45 years of life. Have you? Heck, the term may have never presented itself, if it weren't for these directions. Actually, I'm positive it wouldn't have crossed my path. I mostly did 'quick' key term queries on google to get what I wanted to put into a cohesive writing. A quick search on the term pulled up this statement regarding 'space weather.'

"A mostly unknown or not recognized exogenous factor which has a significant impact on human health is space weather, as **changes in magnetic field lead to biological effects.**"

Is it possible the equally spaced out locations are strategically enabling magnetic fields and they're able to change or shift those and that change is what is causing humanity to have health issues?

No, of course not, says the naysayer. It's solar storms. It's GOD. Don't trip. Mother nature, the Universe, and lightning created by Universal movements is what's causing the ruckus. It's not the equally spaced-out locations NASA appears to flourish in. God didn't give anyone authority to kill.

Umm, stop lying. He did too.

Neurological issues appear to be a significant impact on humanity in Don's directions and it will spur technology to be built that will help mitigate the problem. [Clinical Neurology and Neurosurgery, Volume 146, July 16, pages 82-89](#) say there are possible effects of the solar and geomagnetic activity on multiple sclerosis. It's said that a geomagnetic storm can cause people with multiple sclerosis to relapse. So, we know that they're studying the effects of these storms on the human body. The NIH says solar activity enhances total and cardiovascular mortality risk in 263 U.S. cities. So they say it themselves. **Geomagnetic disturbances** is killing people quicker and causing **cardiovascular diseases**. ([NCBI, PMC6739933](#)) There is also a connection with **seizures** and **geomagnetic storms**. (Spaceweather) All one would have to do is study space weather and the effects it has on humanity. Then ask yourselves. Why do we not have commercials on this stuff? Could they be wanting you to not look deeper into this topic?

The [Journal of BIOMEDICAL- Journal of Scientific & Technical Research](#) - made a statement - in regards to space weather - that says: "All these factors are having a long-term effect on our body and should not exceed a certain threshold over an extended period of time, otherwise the human body develops deficiency symptoms or chronic diseases. This would be one of the many reasons why NASA wants to keep the ISS space station staff in good health at all times. ([NASA](#)) They tell the public, the reason why they want to look into space weather is because of the ISS space team and the people that will want to live in outer space soon. Space weather needs to be understood to lengthen the lives of those who are continuously in the environment. This makes sense. The thing is, conspiracy theorists say there is no outer space and Don says the same thing. Why is NASA space station residents always caught using green screens, invisible wires, and what appear to be freeze hair spray?

Lightening, solar flares, and solar radiation would be a part of that weather system astronauts encounter. These are energies. Just different forms of energies. So why hasn't NASA or SETI done any experimentations with the effects their frequency usage has on 'we the people?' I'm talking about the common people of the world. Aren't we important? They say we are and this

topic (when you really look at it) seems to be extremely important. Especially since climate change has become this huge factor. Why are their studies solely based on astronauts in space? Does that automatically mean none of what's in space affects us, except for lightening? Or could it be, someone is hiding something? After all, philosophers built their philosophies on this 'flat-earth' concept.

GEM Advanced magnetometers & Gradiometers: a supplier of these and **magnetic sensors** for **earth science, geophysics** and other applications. Pay attention to this. **Quantum magnetometers** are widely applied due to their ease-of-use, low cost **surveying**, and data quality. Applications include **airborne mapping, archaeology, earthquake prediction, education and research, environmental and engineering, mineral and oil exploration, observatories, unexploded ordnance detection (UXO), Volcanology** and others. These magnetometers take advantage of the spin of **subatomic particles** such as **nuclei** and unpaired **valence electrons**. (**GEM**)

The [NIH has a journal published online in 2022, Dec. 30. Doi: 10.1021/acsp.ega.2c05583](#) that gives insights into the mechanism of CRISPR/Cas9-Based Genome editing from molecular dynamics simulations that tells me **kinetics**, thermal systems, and an ever-increasing computational power that's opened up the ability to perform a structure based **computational analysis**. In this system, the **valence bond theory** is also a factor. Is it possible this GEM mention is related to genome editing? Ah, as I've said before, I do not like guessing. However, as a target this will be a topic I study further. If God be willing. I will publish those findings. Anyhow, the point here is to point out all the similarities of these terms to the health of the body. **Valence Bond Theory** is also mentioned in the cipher. I do believe it is relevant enough to look deeper into it. Besides, let's admit it. When you fully digest the contents of this writing. You will have to admit the similarities are profound enough to consider.

Looking into them a bit deeper, I can see they've a space weather science application called the **Heliophysics division space weather science application**. It's an initiative expanding the role of NASA in space weather science under a single budget element and supports the multi-agency **national Space Weather Strategy and Action Plan**. (NASA, Space Weather) In 2019 they were over 39 projects focused on protons or heavy ion conditions in the heliosphere because of solar eruptions. The primary goal is to support research by the grant recipient to *improve numerical models and/or data utilization techniques that could advance forecasting capabilities*, which would lead to improved scientific understanding. This division is providing radiation and space weather instruments on the **Lunar Gateway**, which is part of the **Artemis Program**. HERMES was announced in March of 2020. Right around the same time COVID-19 became a big deal. The **European space agency** is also providing radiation instruments. A coordinated effort between THEMIS/ARTEMIS in lunar orbit will allow them to conduct science investigations that was never possible previously!

SBIR is a part of the same organization with a strategic plan to engage in the commercial sector. They are able to do this through the **Small Business innovation research program** (SBIR).

Let's pretend NASA is something like a dice. There are six sides to one dice. If we rolled that dice, and looked at NASA from one perspective, we would be introduced to topographical earth imaging, the other is their quest to encounter or 'talk to' aliens. [In 2017, the Pentagon admits](#) it had a long-standing program investigating alleged UFOs. But previous to this alien talk was "crazy" and only "conspiracy theorists" talked about that stuff. Movies like Stephen Spielberg's "Close encounters of a third kind" came out in 1977, which so happens to be the year of my birth. I believe it was by design to help steer the narrative. They had to prep us into accepting artificial intelligence. After all, they wanted to get it into your body. That movie's opening scene is filmed about 10-15 miles from where I grew up. And I saw that UFO when I was a young girl. It hovered over our house. It wasn't until I was in my teens that I saw the movie. It wasn't until I was about 30 years old that I'd realized all of that was connected. Pretty amazing to be writing (and in possession of all this material) knowing I've had these experiences. Jesus truly is alive and real. He is with us. He is the voice we hear inside when we have been converted. Until then, He is the emptiness we feel because we are separated from Him and it's the prince of the air who rules and he has blinded all of us from birth (until Jesus finds us). This is the main reason why many of you or those you know will not grasp the reality of this work I've embarked on.

Reports of **UFO's** are growing.

This is great news for NASA and SETI. That should really help market shares grow exponentially in whatever space technology they're developing. For those two agencies to hear more and more reports of UFO's every day gives them more reason to get the best retrofit technology out in the market.

Might I add, they are growing exponentially since the NAVY came out and told us about their encounters

In fact, there are people saying they have been contacted by the Galactic Federation. A man by the name of William Milton Cooper wrote a book called Behold a Pale Horse that foretold of a technological stage of advancement that would be used against the people. That time seems to be now. The alien agenda Cooper warned us about began transpiring slowly over the last 10-20 years. Now they are being spotted all over the globe. How did all these agencies know that aliens would be showing up at the same time they're searching for them? Did Cooper have some insider information that allowed him to see all the lies? His book warned us about **Corporate Technology** centered around wireless technology that included a UFO theory that drew the attention of the militias and the defense sector worldwide. He had to have known something. Otherwise, they wouldn't have killed him.

A lot of movies have depicted a technological advancement. Whether it was in movies to show they can teleport or call people with their thoughts doesn't matter. Every possible thing you can think of has a movie about it. I'm positive. This was to mentally prepare the people. It is a form of social conditioning, which is also embedded into the cipher.

since NASA is- the ones who "**called us from the moon**". And... Genomics and nuclear they come together too...

- NASA website states: "[NASA Utilization of Space Nuclear Systems for Robotic and Human Exploration Missions](#): Response to EO 13972: Promoting Small Nuclear Reactors for National Defense and Space Exploration. Space

Nuclear Systems (SNS) technology development offers a wide range of capabilities to support NASA's current and future missions.

- Executive Order (EO) 13972, "Promoting Small Modular Reactors for National Defense and Space Exploration" [1], issued 5 January 2021, directs NASA to define requirements for NASA utilization of nuclear energy systems for human and robotic exploration missions through 2040 and analyze the costs and benefits of such requirements."

Commented [p1]: Not linked

Let's slide in here.

- [NASA relies on the Department of Energy as a nuclear authority.](#)
- "NASA [Announces Nuclear Thermal: Propulsion Reactor Concept Awards](#)" ---
 - NASA is leading an effort, working with the Department of Energy (DOE), to advance space nuclear technologies. The government team has selected three reactor design concept proposals for a nuclear thermal propulsion system. The reactor is a critical component of a nuclear thermal engine, which would utilize high-assay low-enriched uranium fuel. The contracts, to be awarded through the DOE's [Idaho National Laboratory \(INL\)](#), are each valued at approximately \$5 million. They fund the development of various design strategies for the specified performance requirements that could aid in deep space exploration.
- [Experiment verification test of the Artemis I | Deep Space Radiation Genomics \(DSRG\)](#), which has the overarching aim of identifying the metabolic and genomic pathways affected by microgravity, space radiation, and the combination thereof.
 - The publications states: "it is essential to characterize the effects of space radiation, microgravity, and the combination thereof **on cells and organisms**, i.e., to quantify any correlations between the deep space radiation environment, **genetic variation, and induced genetic changes in cells.**

Oh man!! They're working in coordination with all these other agencies to change and control cell behavior. That's the top secret mission status. That's the reason these guys name in Hebrew means LIARS.

They are!

More key terms that fit

- [Scintillator Electromagnetic Calorimeter](#): "[Electromagnetic calorimetry](#) forms a key element of almost all current high energy [particle physics](#) detectors and has widespread application in related [experimental fields](#) such as

nuclear [physics](#) and **Astro-particle physics**. It will play a particularly important role in the latest generation of experiments at the **CERN Large Hadron Collider (LHC)**, where it is expected that [high energy electrons](#) and photons will provide some of the clearest signatures for new discoveries. CERN is playing with the particles in the air. They're manufacturing signatures and creating false realities.

"Infrared radiation has longer waves than red light, and thus oscillates at a lower frequency and carries less energy. Ultraviolet radiation has shorter waves than blue or violet light, and thus oscillates more rapidly and carries more energy per photon than visible light does."

- Near infra red reflectance "A portion of radiation that is just beyond the visible spectrum is referred to as near-infrared. Rather than studying an object's emission of infrared, scientists can study how objects reflect, transmit, and absorb the Sun's near-infrared radiation to observe health of vegetation and soil composition."
- **Near infrared response** is "among the three, near-infrared light, ranging from 700 to 1400 nm, generates high heat that does not penetrate the body's tissues. Within this range, infrared light can signal the mitochondria to function by increasing the body's metabolism, speeding up the regeneration of damaged tissues, and reducing inflammation." ([Austin](#))
- Near infra red is Infrared Light (IR) is the light found just past what is visible to the human eye. Near-Infrared Light (NIR) is the section of electromagnetic radiation (EMR) wavelengths nearest to the normal range but just past what we can see.
- Non-ionizing radiation: "Non-ionizing radiation is a type of radiation in the electromagnetic spectrum that does not have enough energy to remove an electron from an atom and turn it into an ion."
- Near infra red radiation **radiation is a form of energy that travels through space and matter**
- **Interventional radiology procedure:** Interventional radiologists diagnose and treat disease. They treat a wide range of conditions in the body by inserting various small tools, such as catheters or wires from outside the body. X-ray and imaging techniques such as CT and ultrasound help guide the radiologist. Interventional radiology can be used instead of surgery for many conditions. In some cases, it can eliminate the need for hospitalization.

IF we have already been to the moon. Where is that data? Why are they just now testing this stuff? You mean to tell me they sent all them guys out there to the moon and none of them experienced early death or changes in their bodies from the induced changes in cells from the electromagnetic energy changes while there? Are we really that dumb of a species?

Listen! It is being hidden from us! All of us. The messenger RNA, is a freaking nanoparticle that can send and retrieve information. But they tell us that isn't true. At the smallest size possible is RNA technology. It is an advancement in artificial intelligence. The role it plays in molecular testing is large in and of itself! It has replaced regular testing methods. Listen, it was pushed onto the whole world. Now people are seeing the effects of this weapon. Why would they not have told people mRNA was gene therapy that changes DNA?

They want every human on earth to accept their software so the genome can be changed, edited, and controlled.

[September 14, 2022 TIME magazine said that Moderna announced](#) - in June – they would be ready to implement their mRNA based Flu shots! Scientists have always taken more than 6 months to two years to develop vaccines. So why now?

- ❖ The [emergence of mRNA-based therapeutics & vaccines](#) is the primary focus within the healthcare industry at this time.

Cancer is also being combat with vaccines (although called MiRNA). They are still an RNA which is “Ribonucleic acid (RNA), which just means it is a polymeric molecule essential in various biological roles in coding, decoding, regulation, and expression of genes.”

This can be accomplished using computer science influenced by the electromagnetic spectrum.

If you look into the history of looking into chemical compounds. You see it began in the 1600s. If you look at the history of geomagnetism you find it as early as the fourth century BC (even though certain measurements weren't recorded until 1544AD). ([here](#)) Oddly, geomagnetism was used to tell people's future. But by 1050 sailors were using it for navigational purposes. ([here](#)). These early key points show how these modern-day findings began to evolve. The process and nature of their lifecycle. And they seem to also connect to the Egyptians, which can be tied to the “gods.”

Looking at early key points regarding any of these key terms and sub-sets of information does show how these modern-day findings began to evolve. It's just a matter of applying yourself, taking the time to study it, while using critical thinking skills.

Even though the worlds narrative says something different, the process and nature of their lifecycle seem to connect to the Egyptians or the Greeks, which can be tied to the “gods.” This also seems to be a very

Commented [p2]: jargon

important part of knowledge that people don't want out the bag. Why would that be?

Could it be related to total control, world domination, and taking a bunch of angels to the pits of hell? I came to the conclusion that's exactly what's happening. there is evidence the Ancients knew these concepts from studies conducted in archaeology across the globe. So why does the narrative claim something different? I have found, each layer is fundamentally obscured by educational systems and popular publishers. However, as I previously mentioned, I believe we can see the proof by looking at the timelines in which these systems began to become public coupled with those things hidden from the public. The lack of public knowledge should serve as evidence there was a need to hide. Then there is a different kind of evidence – that's similar.

This very end result – spoken of by the Prophets – is what we are seeing here with the evolution of technology and the need for them to get it into your bodies. We are the center of their system – run by technological advances – or what can be considered an autonomous system.

Think about this. If they were looking for a way to manipulate matter back then with implementing oils, tinctures, and teas – then – (back in Ancient days just as Enoch tells us) aren't we just more advanced, which is why they are wanting to control the bodies biological rhythms?

This is molecular level scaled work, which is also known as atomic manipulation and just so happens to be the center of world news right now with Covid19.

- I believe NASA participated in targeting citizens and hiding the evidence. They were specifically created to destroy the lives of people. They were the beginning forces of this system that's now changing people from the inside out. They were created for this very reason. They have always operated under the guise of going to outer space. When the reality appears to be. They were using their technology to spy on people. They could carry out any hitman agenda assigned to them because they had complete ownership of the connecting factors used to find and catch a criminal, i.e; radio communication, digital media sources and the ability to spy on people. Heck, one of the ISS ladies was caught hacking her lesbian lovers bank account. This just proves to me that's who was hacking mine. All of this would fit into the narrative disclosed back in 2000 with the human genome project.
- We are forming additional branches of the military, for crying out loud. We are told they want to be sure to have the arsenal to fight these other space beings, and it's a fact, weather affects human health and human health depends on the variety of things these alphabet agencies are

involved in. One of them being radioactive-, ultraviolet-, or geomagnetic radiation. Ya know?
That stuff the FCC oversees.

NASA's time travel machine is related to the world's most powerful telescope that has allowed astronomers to look into the "early cosmos" to capture light of galaxies that formed after the Universe was born. The **James Webb Space Telescope** is the world's most advanced space observatory that took nearly two decades to develop. It's expectations are astronomical and sci-fi in nature. It's much more advanced than the Hubble Space Telescope because of its location in space and the design.

Darpa is researching and implementing technologies that work on the available RF spectrum.

1. SETI is working on technology used on the available RF Spectrum
2. NASA is working on technology used on the available RF Spectrum
3. As an especially important side note: The one common goal of elite in power. The system to have a one world government: all this stuff ties into the RFID technology that was prophesied thousands of years ago.
4. In can assure you. This RFID technology is already in full force implementation. They're using it to track and monitor cargo as they slowly get unbelievers to take it on.
5. [Earlier, in the linked studies, we found the electromagnetic spectrum and the human body are associated](#) in that one affects the other. NASA, SETI, and DARPA work with the RF Spectrum

NASA employs physicists, molecular biologist, chemists, and so forth. They've a wide range of space studies based on historical medical and scientific data sets. Don has most all of the important key terms related to these systems. They were strategically placed in different names. How would that be possible if it weren't by design?

[The Atomic Clock](#) project will end in August. At that time, the Deep Space Atomic Clock-2, an improved version of the cutting-edge timekeeper, will fly on the VERITAS (short for Venus Emissivity, Radio Science, InSAR, Topography, and Spectroscopy) mission to Venus.

I mentioned spectroscopy earlier. We found it was related to molecular biology and Covid19 testing.

NASA is using techniques to keep track of “space time” that molecular biologists use at the atomic level to diagnosis Covid-19. How strange is that?

Spectroscopy is also used in soil samples using FTIT

Without these key terms, and some of the study I’ve embarked on, I’d have never put that together. Would you? So why is the people employed in these agencies focused on those things that DARPA and the Department of Defense and the Department of Energy would benefit from?

There’s no real good place to talk about this (except for now). Since I’m not really acclimated with anything more than what’s in Don’s directions, and the little research I have done, one of the things that stands out to me the most, is cryptocurrency. In the middle of my researching journey. I was intrigued to learn of how these currencies are coded into the character names. I decided to look something up one day, and...

Oh, how mind blowing that it was to have stumbled over a few more aspects that I’ve not had the time to really look into. Visit my blog – or my website – linked at the end to understand fully. But, **MiCa** is a huge term that’s tied to an interesting set of pictures about the ‘Mica men’. It just so happens. The cryptocurrency of Belgium is called MICA! There is also **Mica Aaltola** who is very well known for his position as a political scientists and director of the **Finnish institute of International Affairs**. He recently gained media attention during the 2022 invasion of **Ukraine**. ([WIKI. Mica](#)) [The Medium](#) recently reported on How Bitcoin is like a **giant Cybernetic Meta-Brain**. Bitcoin is said to have been compared to a “mycelial network and a living thing.”

The author does a really nice job relating the brain to the crypto Bitcoin. In the linked article it is stated, “Individual neurons can die, and new ones can be born. This happens all the time. When neurons die, their connections are broken. When new ones are born, they gradually develop new connections. The birth of new neurons is called **neurogenesis**. The development of new connections and severing of old ones is called **neuroplasticity** and it continues throughout the entire life of an organism.” Both of these terms embedded into the cipher alluded to the job already existing, now is just the right time to bring it out into the forefront. Again, it’s not widely accepted. So, it is appearing only in movies, publications on the “what if it existed” columns, hypothetical theories for research and development, and in military applications (even though the public is unawares). And let’s not forget all the

targeted individuals who are suffering at the hands of these evil people needing to test out the product.

They are the real victims to these heinous crimes against humanity.

[Neuroplasticity has been around since 1948 when it was first used by Polish neuroscientists Jerzy Konorski in 1948 to describe observed changes in neuronal structure.](#)

The University of Queensland tells us neurogenesis was first recognized in the 1960s.

What I'm getting at is the timelines. Paying attention to the dates of these developments allows us to see a bit clearer the steps they were taking back in the 60s to line us up to where we are today. Those timelines are found in the details of all these subcategories.

Anyhow, MiCa is built to unleash the power and innovation of crypto through trust. It's also said to be the way to develop a "**strong ecosystem**." Belgium's digital minister **Mathieu Michael** describes the EU's plan to "bring order to crypto" – in a time when WEB3 is going to be big. '**Europeum**' is said to be a way to "safeguard privacy." (Coindesk)

Commented [p3]: revise

Now why would Mathieu say anything about building a strong ecosystem when he is talking about cryptocurrency? Isn't an ecosystem "a geographic area where plants, animals, and other organisms, as well as weather and landscapes, work together to form a bubble of life?" ([Belgium digital Minister](#)) The man says he believes he can boost cryptocurrency in Europe "because Europeans are really strong to regulation."

So, what bubble of life are they trying to form?

The human computer one.

They just need to get all the legal aspects of it put in place.

As you see from the previous mentions. Powerful and dominating forces are using the electromagnetic grid. If they wanted to keep it a secret from the people until they were ready to accept it. Are you going to tell me they couldn't achieve that? NASA and SETI, DARPA, Lockheed Martin, NIH, NIMH, and all the rest of those guys would be protected under **NATIONAL SECURITY LAWS**. This gives them the umbrella they need to keep things on the hush hush.

Could this also be why **NSA** exists? They can monitor anything. Even me writing this now.

The history is so screwed up. Might I add, people have been told so many lies there's no real way to burst through them without something of this magnitude, and people aren't that willing to throw themselves in front of moving cars for other people. Especially for people they don't know. So, it's not being done by many. In fact, there may be 2% of the people trying to inform 70%. While the 28% hide behind laws, regulations, top secret mission status and hopes they will never have to worry about falling prey to their systems, because they're hiding them, helping to develop and implement them. This should pan out well for those who are profiting. At least, that's what they think. Well, I mean. Here I am to help share. However, what good is that when you live in a society that some people think. If a man has a Ph.D., he isn't going to want to read a book that doesn't use the same jargon he uses, because he is smarter than that... What idiotic excuses.

Can any of those doctors or judges put all this information into one small book? Can they even put all this information together in the next 4 years? You think so? Haha, you're naiver than I imagined. No-one could put all this information into one small book – like I can – because it would take years of study to learn it, and even then, they wouldn't be able to bring all these key terms into the picture – in that timeframe – without some help. Like, they need Don. Like I have Don.

Besides, those professionals know something is going on and they say nothing. They are unsaved cowards under the control of the Prince of the Power of the Air.

Come on, it should be obvious by now that DARPA and all the other named alphabet agencies are using physics (witchcraft) to play with signals that comes from light, sound, and the electro-magnetic energy." NASA is using magnetics in locations that are equally spaced out. If they keep you believing the earth is a globe with the sun millions of miles a way you will always believe the lies! What do you think mRNA is about? **Chimeric RNA**. Have you ever heard of that term? Let's explore it. The mRNA post on Wikipedia says,

"Normally, exons from the same pre-mRNA transcript are spliced together. However, occasionally gene products or pre-mRNA transcripts are spliced together so that exons from different transcripts are mixed together in a fusion product known as chimeric DNA. (PAY ATTENTION FOLKS) Chimeric RNA often incorporates exons from highly expressed genes, but the chimeric transcript itself is usually expressed at low levels. This chimeric RNA can then be translated into a fusion protein. Fusion proteins are very tissue-specific, and they are frequently associated with cancers such as colorectal, prostate, and mesotheliomas. They significantly exploit signal peptides and transmembrane proteins, possibly contributing to the disease phenotype."

This is atomic spectra, atomic manipulation, changing the topography of a genetic structure.

Don't you recall hearing about the UNSW implementing the miRNA treatments for cancer patients? Can't you see it? It's happening right under our noses and there is literally no way of stopping them! Not any time soon or with anything we have here on earth currently.

This is why the Messiah's second return is paramount. He is the one that will need to recompense this evil. It is so very well hidden.

This technology of DARPA wouldn't need any type of surgery to install electrodes into the brain, which they can (and have) already done. They claim it can - and will be used - to control robots and help military missions, but I know it's for something more nefarious for a number of reasons.

1. I am a target
2. I have Dons directions and he clearly lines it out.
3. I hear stories of other targets.
4. History proves this.

Let's go back to ecosystems, which can crash. Why are all these factions talking about an ecosystem that's related to cryptocurrency? What all does that entail? As we answer these questions, we must cover a lot of ground.

You are considered data. They want to know your location, your thoughts, your friends, your motives, and all for a reason. Some historical accounts tell us that humans once mated with Neanderthals. (Newscientist.com) Human-animal hybrids (have you ever seen the ancient Egyptian hieroglyphs?) are also known as chimeras, which just means they're a mixture of human and animal cells. They're created by injecting human cells into the embryo of another animal. The BBC says, no human-animal hybrid embryos have been brought through a full gestational period. But that's changing. Dr. Hiromitsu Nakauchi at the University of Tokyo plans to bring mouse-human and rat-human hybrids to full term. Oddly, I can't say what's real or not. Yet, I've seen a lot of different pictures on chimeras. Were they faked? Were they real? I can't say that much. But with what I know. I'd say they're real. It's likely the evidence is hidden in a file hidden under national security laws and most of it is "redacted."

It is the goal of every nation's security and defense policy to maximize its ability to act in all security scenarios, which is what's underscored at the [Finnish Governments Defense Report 2021](#). According to the [US Department of Defense's 2020 Data Strategy](#), data is the main driver to doing so. The key to a data-centered approach is the alchemy of turning data from a passive element into a more dynamic, smarter, and more refined entity. Data is the "primary and permanent asset." In the corporate world data is crucial and a key element in the geopolitical arena. It is viewed as "an essential and integral part of the (national security) mission itself." The move to a data-centric approach is not an easy one. In fact, there are many steps to take. In the natural setting technology is involved in moving to a data-central environment. To obtain the desired goals for a nation's security using [cross-platform data flows](#) to keep the cost down of building a new infrastructures. With this data driven technology base in the National Technology Initiative we can see technology evolving exponentially and we are seeing competition on the world stage between Nations such as China and the United States. Contemporary data-flows used to be governed by the vulnerability between nations and that's no longer the case. Domestic and foreign

restraints are a thing of the past. The Technological evolution enables expensive platforms that merge multiple capabilities with interdomain implications like the 5th generation fighter aircraft platforms. At the same time cheap platforms (such as micro-drones) can be created by the convergence of data. The United States could be considered as having an operational advantage. As they use public and private sectors and academia to produce offset technological innovations while continuing efforts to secure access to data through diplomatic, legislative, and clandestine means, as more and more data is gathered through public-private partnerships. The US is also working in collaboration with the European union to ensure that technology is serving an interest there as well. You can bet your arse Don shows me cyber security issues would be on the rise because they need them to push regulatory needs. (Nov 2021, FIIA)

Power through Regulation! Who will win that game? I have my assumptions based on what Don says...

As I've said, like the repeating broken record that I am. There is so much ground to cover. It's freaking hard fitting all this crap together.

We still can't get stuck on one topic. Trust me. I do not enjoy surface-level thinking. It's harder to quit in a topic and switch it up for me than you may realize. However so... It is necessary.

The Smithsonian has a volcanism program. I'm not exactly sure how they're related, however, UNESCO World Heritage Sites play some fundamental role to this as well. Anyhow, the Smithsonian is reporting on the volcanos blowing. They say, at any point in time there are at least 45-50 volcanos blowing globally. A combination of these named agencies work with many (un-named) corporations to make use of the electromagnetic spectrum in that they're capable of using technology (seismic acoustic soundwaves, VISSR atmospheric sounder, and more) to make volcanic eruptions happen. They're also re-routing the water table across the globe using a multitude of multiple different operations. Then they're also changing the topography of the world's landscape. This is how they're causing so many record breaking natural disasters. I will go into a few more details later.

First, let me point out how "archaeologists study many aspects of human history, like landforms and ecosystems that have been altered."

Environmental archaeology focuses on how human groups are altering the environment and then adapting to that altered environment. One can imagine, with this "**new ecosystem**" - that's been talked about from many of the aforementioned primary key players - it would have been a primal part of philosophical studies generations ago. Oddly, there are many historical quotes from well-known people depicting this. In fact, you should look at the many quotes to get an idea of how they thought about what would happen in our day and age because they were planning for the future.

Let me share something relative here. The **University of British Columbia** and the **Archaeological Institute of America** are two major key players, and in the beginning of my study of the cipher contents, I was stumped as to why. It wasn't until I found myself

researching some of the other key terms that were more along the lines of business functions that I figured it out. That's where the homogeneous, cosmos, and all that comes in. If there could be any mysteries. They would all be solved instantly with the artificial intelligence system and biological data at the molecular level, and this is a very very old concept. They're now using that concept to bring in the final pieces of the NEW WORLD ORDER.

For instance, I heard they found NIMROD. Many believe he would be a great man to study. Not to mention. There's a lot of talk of Jesus' second coming. It is all over social media and NIMROD is a biblical character. Might I add. There are MANY different mythological beings coded into Don's directions as well? Now would be the perfect time to fill peoples free time up with characters like this popping up in the news as a "new discovery" that would be analyzed at the molecular level. This would sell a lot of papers, while keeping society busy with all the "new research" they released to the public. In the meantime, the population is busy with new innovative tools on how to make themselves look like a monkey or 25 years younger.

However, they may get the thought to look up. Who are my descendants? And not even realize the thought was planted from a targeted short video clip in an advertisement they ran across on social media one day specifically targeting them.

Is this all a thought of how it may be happening, or is it fact?

The Federal Government is handing out funding to. "Get a comparative analysis of DNA and proteins that gives an intricately detailed view of patterns of variation, common ancestry, and how evolution works." This is all intertwined with one another. Remember, UNSW was "bridging" different disciplines...

Don Lists Archeology, archeological digs, artifacts, and different languages (like ancient Greek). The word archeology comes from the Greek word "arkhaios, which means 'ancient.' On the surface, you may not see this right away, however, archeologists seem to be the gatekeepers to an ancient - and well hidden knowledge - by design, which is why the word has its root in the Greek and means Ancient.

This is the same thing that Archeologists are saying they can do now!! Let's first point out. Doesn't this also fall under an umbrella of terms - to say - "map the human genome?"

According to Don's directions [Archeologists with the Smithsonian Institution](#) have something BIG to do with his directions, and I figured out what that is. They're keeping the narrative in tack. Not only have archeologists been using these same systems for years, but they're also now pretending as if they need better ones to recreate history.

HIS STORY

Upon inspection.

What would you know?

“The Smithsonian’s federal funding for fiscal year 2021 is \$1 billion. The Institution is 62% federally funded.” Their website also says. “Congress passed legislation in late December 2020, establishing two new museums at the Smithsonian: the National Museum of the American Latino and the Smithsonian American Women’s History Museum.” There are 21 museums, some research centers. Their line of research is in history, archeological findings, preserving the past, archiving, and conservation. All of this is done at the molecular level.

Even though the public isn’t being informed of this being the case. Evidence suggests knowledge of chemistry, artificial intelligence, frequency, light spectrums, and molecular biology is already in the future and they simply want to bring it out bit by bit as some new hot way to combat cancer, mental illnesses, and other medical issues like diabetes because of an idea that was conceived a long time ago. The idea was then broken down into the same or similar kind of parts and then broken down to subatomic parts (just like the body is). Evidence is available to supply enough proof that scientists, corporations, and global leaders were in the perfect position to obtain a long-term goal of total world domination, and through this means, the beast would be served.

Funny thing, I’d never had made this connection if it hadn’t of been for Don. Archaeologists are the gate-keepers to the hidden knowledge, history, and relevant topics. Oh, how I would love to have the time to do a comprehensive study on that.

There is an ancient wisdom, with an ancient language, and an ancient agenda playing out right now and it is hidden by the gate-keepers and their fairytales.

In one publication, depicting a story about a guy named Jason Lewis who works for TBI (**Turkana Basin Institute**), it is said, “assistant director of the Turkana Basin Institute and co-author of a study published in Nature 2015, (about his team’s discovery in Kenya, which is called a Lomekwi tool) is said to have been developed 2.8 million years ago by a species who evolved into humans (as we know them today). And it is stated:

“Conventional wisdom in human evolutionary studies **since the 1960s** has supposed that the origins of knapping stone tools **by our ancestors** was linked to the emergence of the **genus Homo** and that this technological development was tied to **climate change** and the spread of **savanna grasslands**. The premise was that our lineage alone took the cognitive leap of hitting stones together to strike off sharp flakes and that this was the foundation of our evolutionary success.”

Jason’s statement gives me the final piece of evidence I needed to make my assertions you will hear from me in this writing. Firstly, I must point out. Jason is talking about molecular evolution. You can look into this yourself. It is believed by scientists that we lost genomes over time, and they want to see if they can reverse the hands of time. In fact, NASA has a program centered around molecular time travel. We will get into more details on why that is important after a bit. The other very important aspect I’d like to point out has to do with the linking of climate change to archaeological digs and historical recreation. The third point to bring out into the light is. There has to be an elite group of people who spearhead a global plan such as the one Don outlines. With this being said, Don talks about a World Within a World. There’s a lot to the wvw, however, I won’t go into detail on that in this

writing. What I will say is, Archaeologists in the highest order are working with this underground species in some way shape or form.

According to Don, the ones who run these ruins would know where they are, and they could easily lead teams of people there, and allow them to uncover stuff. They will do this using their geospatial resources that the radar systems now provide. Although, they've known of these ancient sites and have merely kept them hidden for a time like this. This allows for lower-level archeologists who would study under a 'master' to make assumptions about what may have been, what is, and what can be using the models and modelling in archaeology that were already lined out for them.

In the 1960s and 70s archaeology was attracted by concepts adopted in **natural sciences**, which influenced development of what is now called "**New Archaeology**." As I've already mentioned. Archaeologists study and analyze the physical remains of the past, including artifacts, architecture, biofacts, **and landscapes**, to understand **cultural history**, the ways we lived in the past, and how society changes over time. They dig out ruins, manage the logistics of them, analyze the artifacts and publish research results in **academic journals**. Another interesting aspect of archeologists is their study of the behavior of human beings and their societies, both past and present. ([here](#)) Archeologists have been finding old remains. They say they can test those remains to learn more about their genetic make-up and re-create history with a much more accurate account using molecular biology and artificial intelligence. This allows anyone of us to see traits of our ancestors and how we have changed as a species. The Archeological industries' new ability to find every detail about their molecular structure, then recreate it, and made into a simulation is touted as a "powerful way" to resolve age-old debates and either prove or disprove theories. The power of Ancient DNA can be seen as a good thing for researchers in the way of understanding the human body better to fight disease, which leads to healthier and longer lives. This is a very important piece of the puzzle in Don's directions.

It is my understanding that the same technology being used to recreate life is also being used in quantum computing to help people grow accustomed to its presence. For instance, in apps like TikTok, they are presented as age progression software. This is like a subatomic aspect of the same system to create the human genome to be unstoppable, immortal, and resistant to everything. To create a person, say, from skeletal remains – to see what they looked like at their primal age - isn't much more different than the TikTok app's ability to make me look younger by taking away my wrinkles and putting my skin back into its place. The software behind the technology is basically the same.

This is also related to land surveying in that they can geophysically prospect in archaeology now.

A line item (key term) **Direct Run of Science, Geology**

Archaeological prospecting allows for **satellite remote sensing, aerial photographs** and **remote sensing, ground-based geophysics** and lidar mapping, surface artifact finding... They're essentially capable of looking for areas where ancient artifacts would be. This would allow for humanity to get a better understanding of how the earth has changed over time and how humans adapted to that change. After all, we are facing a "climate change" that everyone is going to have to adapt to.

Geospatial Resources are also used by the U.S. EPA to map air quality, water quality, hazardous waste and the environment around you. ([EPA](#)) The 'new technology' implemented allows the EPA to share with others easier. They have real-time data collection, high resolution imaging, and even ground penetrating radars. Anything you want to know about the land, they sure enough can find out.

Don's directions elude to the EPA falsifying information. I wouldn't find this odd if it weren't for the fact that the model outlined in Don's directions is something you can see on the news. For instance, I could see where they were claiming certain volcanos would blow. I named a few (such as White Island, Canary Islands, and Iceland) and they all did have violent eruptions! Let me explain a bit more about what Don's directions show me - just as I saw it in the cipher - because it is unfolding as it is outlined. All one must do is read the cipher like a book!

Don basically says, there are two sides to every coin. This coin would have one side that looks like they are helping in more ways than one. For instance, the government is disclosing those things that happened to my grandparents and my dad. They've begun making payments to certain survivors for agent orange. (I am a victim of this poison. It came through the y-gene down to me from my dad.) Campaigns are being run to alert residents they may also qualify to be paid from 'this bad thing' related to agent orange, that they did 30-40 years ago. ((THEY WON'T TOUCH MY CASE. YOU SHOULD ASK WHY)). However, they will offer the kids harmed - and those stationed there at the time - compensation. The problem with that is there are no children who would have suffered besides the grandchildren. All the children of the original victims are either in their 40s or older; or they're dead. The Camp Legeune issue was said to end by the year 1977. My little cousin should be receiving a check by now for her arm deformity associated to agent orange coming from her grandpa's **Y-gene** (just like my niece).

Great news!

However, the other side would be hiding stuff and trying to mitigate anyone finding out about current endeavors. They go as far as silencing anyone who may be in opposition to the narrative. Oddly, agent orange is a big thing that every household in America has had to see a hundred times on every social media platform there is. However, people don't know about all the train derailments that had forever chemicals in them that's now polluting our waterways? Why the hell does Don list the locations to these places?

Right now, stringent government regulations are driving the health and safety (EHS) market. The energy and chemical sectors - where workers handle **hazardous products** - use **environmental health and safety (EHS) services** *and software* to prevent workplace mishaps. The **geospatial resolutions** that can be obtained from the lidar mapping allows them to identify hazardous sites before entering. Right now (I'm not going to go too far in-depth) a barge incident with methanol in the **Louisville area** has residents concerned that the water won't be safe to drink. However, the news is saying "don't worry about it." The same thing is happening with the train derailment in **Ohio**. Reports of residents saying "they've become sick" have been put on hush-hush cause those videos quickly vanish from the internet.

Funny thing, right now, at the same time they're telling everyone about their dirty secrets 25-50 years ago (like **Camp Legeune**, in which they're saying that they're going to compensate the families for the poisoning they've done) people are being poisoned and most of America is largely unaware. I wonder how many Americans have not seen the ad on Camp Legune and know nothing about the fires, chemical spills, and the likes? This isn't a laughing matter. Nor is it something we should shrug off as if it has no meaning in our lives. For instance, as I mentioned, agent orange is directly related to my own case. My biological dad is a marine veteran who believed this pandemic was as scary as the government claimed. So, he got two jabs. ((I believe he has been sick since, and this is why he hasn't responded to my last call yet.)) Anyhow, he served in **NAM**. He was stationed at Camp Legeune, in the late 70's. I was born in '77. Apparently, the Y-gene comes from my dad and the agent orange comes through the Y-gene. I have to admit it was pretty ingenious of them to find a way to poison generations of people. They poisoned my dad and in turn, he poisoned me. They knew this. They simply hid it. Research it. You will find out. They hid it. Now they want to come out with it as if they're sad about what they did? Umm, Monsanto took over the seed market. If they had no problem poisoning generations of people a generation ago, what makes anyone think they're going to have a change of heart? Shall

we dismiss the vast amounts of corruption in every field? Shall we dismiss the vile nature of celebrities these days too? Who is steering that narrative and why is it now?

Yeah, you say it doesn't line up with one another. I get it. You believe it's not related. Ah, with wisdom comes much sorrow. The decline of humanity is nothing short of a prophetic manifestation.

- It is written in Matthew 24:12-15 and because iniquity shall abound, the love of many shall wax cold. But he that shall endure until the end, the same shall be saved. And this gospel of the kingdom shall be preached in all of the world for a witness unto all nations: and then the end shall come.

The idea that they can use an old event to pacify the people must be exposed. It is the very things -that are poisoning communities in real time - that will be put on the backburner and if they do a good enough job with circus entertainment (using certain frequencies, football, and disinformation agents) they can keep the people docile and pretty much unaware. Plus, they can look like they're doing their jobs! How many people does it take to cover up hazardous areas throughout the U.S.? According to the EPA. Not that many! In fact, now that they have their monitoring systems in place they can employ far less people.

They're implementing robots in the Amazon line to "help production." Humanity is being told they're still developing robots. But that's not true. The robots exist. Everytime they say they're developing I've proven they already have.

Pretty scary to think that government related companies or entities - whatever you want to call them - stand to benefit in incidents that pose an environmental health and safety risk to its own people, which is why they remain silent. I couldn't help but surmise. Most of the time, people probably don't even think about agencies - that oversee those things that would pose a risk to their health - would be used to hide things such as **chemical terrorism. So, they're not really thinking about someone exploiting that system. Unfortunately, they are. I mean, if the EPA has a few people in the highest positions there - who will commit fraud - they can easily say something isn't wrong (with the water per 'say) and that not be the truth. How would we really know?**

The pay for EPA employees is competitive. Not to mention, just because someone has Ph.d behind their name, it doesn't mean they won't lie, steal, or

cover-up incidents. Case in point, Agent Orange. I'm 45. They've known for over 30 years. But they stood to lose a lot - if they were found out 3 decades ago. By now, many of them have died. Those who haven't, well now... It's okay because they don't plan on 200 million Americans making it past 2025. Besides, laws have been changed and you can't go and get those who spent time lying and covering it all up. They're protected by those laws. And since the death rate is souring, and the birth rate is dropping, I'd say they look like they are on the path to obtaining their goals. All they need to do is keep the level of people in the "know" down, pacify those who do know, and stringently punish anyone who suggests otherwise.

With this being said, there are those who are behind the train derailments and barges. I've seen numbers of train/railway mentions in the cipher; such as **Norfolk Southern**, **Erie Lockawana**, and more. Well...

They won't pay until 30 - 50 years from now based on the statistics. Right? No! They will never pay because the laws around it protect them! Go ahead. I dare you to challenge me on this one. I mean, come on **Tuskagee Project**? As I mentioned earlier, if you don't [know the history of the USA](#) look at the secret experiments on the elderly and disabled. Such experiments of Doc's "giving hepatitis to mental patients in Connecticut, squirting a pandemic flu virus up the noses of prisoners in Maryland, and injecting cancer cells into chronically ill people at a New York hospital, or spraying the people of **San Diego**." Btw, all of this happened 40 - 80 years ago. Do you think they were letting the cat out of the bag then? If so, why doesn't our history classes teach us about this level of treatment from our government?

Anyhow, the point here is to say. This is the model. They follow models. This model works for more than one aspect. But let's move on.

The pandemic brought about trillions of dollars within the first few months. Fischer -Scientific benefited greatly from producing masks that were later found in a dump yard by a gentleman who worked at one of the facilities. He showed boxes upon boxes of ventilators that the government paid for. I bet if you were to trace who is invested in Fischer Scientific, then look at their financials and those at the EPA you'd find some strange payments (or something alarming) because I'm very aware of my claims being true. They're happening. There are people working to exploit the EPA's system and the American people are not being told the truth about the chemicals, parasitic invasions, and where the heavy metals are coming from!

For incidents like the **Ohio** Train derailment, which is Norfolk Southern. The US EPA took control of the clean-up efforts in **East Palestine** and [ordered Norfolk Southern to pay for it](#). This appears to be the right thing to do. However so, there's nothing wrong with plucking things a part to understand where exploitation of that system would benefit. Without the US EPA stepping in who would represent the people of Ohio? Who would tell the people what to expect? How long before the area will be safe? I mean you get my drift right? The people need the US EPA to step up and in. On another note, but the same topic, there are reports that I've personally heard from residents that say. Businesspeople were going around getting residents to sign a contract that basically would make it so the residents couldn't sue Norfolk. Now, that's dirty business. Think about the clean-up. Who holds who accountable? If the EPA gets a kickback from Norfolk to cover stuff up. Who would know? How are the people of Ohio sure? Look, reports say that laboratories around the Ohio area stopped testing for Dioxin. Why? Who controls and governs that? Why can't the residents get tested in their area? Why isn't the EPA making the tests readily available? After all, COVID-19 brought about ARF. Government is consistently stepping over their boundaries and making people do what they want them to do, why aren't they forcing them to get the residents tested? Who is hiding something?

The US EPA each year receives funding from Congress. In FY 2023, the EPA received 76.27 Billion. In FY 2022, the budget was similar. However, FY 19 – 21 was not a third of what it is this year (2023), and in 2022. The difference in funding is three times the increase! You can view the graph ([here](#)). Why did they do the increase the year before all these disasters started occurring? Especially since they've lessened the need for employees using the satellite mapping they've employed? Doesn't that indicate, someone knew something was coming? I'd say so! In 2022, [Governor Dewine announced 3 million in H2Ohio grant](#) to restore the wetlands, and some of this funding goes to Covid efforts. What does the wetlands have to do with Covid? There's so much to say in all of this. It is better if I carry more of my understanding over into my blogs after this is written and out. Be looking out for it. I'm going to love digging into this one even more too!

Anyhow, this money keeps people employed and satisfied. It also keeps the need for these people in every community, which makes it an economic driver. It's a win win for alphabet agencies to have a disaster that they need to come in and clean up, even if it is in their backyard. Surely their financial compensation can help them to withstand the times without too many

repercussions.

Trains dumping chemicals into the Ohio River is an incident that boosts the Environmental health and safety sector, which is another major aspect to Don's directions. At the same time, technology is being implemented, in various sectors, that interoperate with one another. The technologies connect to Airbus through a variety of computer applications, modules, and signals. This system of systems can be seen looking at the **EPA's geospatial system**. Then looking at the new form of archeological site hunting using geospatial satellite systems. They're basically the same.

The **National Geographic** says, the **Mississippi** used to be wider one million years ago. Don say, "**one million year geology**." Archaeologists are using the same systems that they're making available to the public to measure their **air quality**. On a side note, I've been paying attention to the AQ and it's been declining. I've also got evidence of air quality being bad North and South of Salt Lake City and the government website - to show the monitored volume of particulates in the air - was different than a non-governmental body. Now why would the Air Quality be hidden from people? Don't the governments have better systems than a non-governmental body? Why did map.purpleair.com show it was over 2000 for more than 8 months? Then, get this, I talked about it and those two sensors haven't been on since. You don't think they know I talked about it?

Even the Department of Energy has a health and safety department that is also being used to exploit. The W.H.O website says, "Electricity is vital to sustain good health."

The screenshot shows the top navigation bar of the WHO website with links for 'World Health Organization', 'Health Topics', 'Countries', 'Newsroom', and 'Emergen'. Below the navigation bar are three tabs: 'Overview', 'Impact', and 'WHO Response'. The 'Overview' tab is selected and contains the following text:

Energy and health are inextricably linked. Access to clean, sustainable and affordable energy, outlined in the seventh Sustainable Development Goal (SDG 7), plays a crucial role in advancing health (SDG 3). Energy is also critical for achieving almost all other global goals that include eradication of poverty (SDG 1), opportunities for quality education (SDG 4), achievement of gender equality (SDG 5), access to clean water (SDG 6), jobs security and economic growth (SDG 8) and combat of climate change (SDG 13).

The links between energy and health are particularly evident in homes and health-care facilities. Access to clean and sustainable energy in homes is essential to protect people's health from household air pollution due to the use of polluting stoves and fuels such as coal and biomass. Access to clean and reliable energy in health-care facilities is important to ensure the delivery of essential health care services for disease prevention and treatment.

If you read up on it. you can clearly see they do not talk about the energy grid being able to be used in a heinous crime against humanity. But it is. Sadly, the less the people know. The better.

[Smart grid information systems](#) would use the same systems to deliver their products that are the same as what the EPA and geospatial archeologists use. NASA would use these products to view earth changes. Geological historians would use these systems...

I mean...

It's a mighty web that's been weaved.

DELTA systems are offering help to get grant money that would help schools integrate a technological surveillance system for a safer environment.

[Partner allowance for Safer Schools](#) will enable government bodies to monitor your children, in real-time. This should be good!

Or maybe not? Have you ever thought about the implications? How about you end this writing with an extensive amount of research necessary to see how governments have been killing their own citizens for decades!

I soon realized the reason for specific line items in the cipher that didn't fit anywhere at first.

For instance, here's some of those line items:

- System exploitation
- Operations module
- In the news
- More stuff
- Milestone
- Multiplex system
- Mass shareware
- Monitor statistica
- False science
- Interactive Structures
- Industry solutions model
- Internal specification
- Integrated system
- Integrated science
- Infrastructure service
- Industrial specification
- Interim standard (series of communications standards)
- Intelligent squadron

- Instrumentation system
- Inspection services

Of course, there are many more as there are thousands of line items. I'd keep you forever busy reading line items if I listed them all. You can always read the cipher like a book after this. There is no doubt in my mind. This is by design. They lie about the science, kill people who don't agree, and highly pay anyone going along with it. Covering all this information should allow for you to see this. It's a model used to keep people busy learning and never coming to the knowledge of the truth. Their power lies in our ignorance. And I know what I'm saying can be proven by their lack of evidence, own public omissions, and current studies. It's not a far right- or left-wing conspiracy. This is a truth described cryptically in Don's mysterious directions.

I've been a targeted individual for most all my life. However, I noticed something very strange was going on nearly 15 years ago. During this time, I endured nefarious activities that destroyed my life and nearly took my soul. These won't be talked about in detail within this writing. However, I will bring up the fact that I've been praying for answers most all that time. Around seven years ago, I had decided to give up running and change my life. After I gave up all the bad things, I had been doing during the time I was running from this hidden hand, answers started coming my way.

There was a gentleman by the name of Don Ashford that - by a strange set of circumstances - I had met. He came into my life in a very weird way, and he left in a very weird way as well. In, or about 2010, I'd made a trip to Fort Lauderdale Florida with my three children. We didn't have to stay in a hotel because Don was out of town and offered me to stay in his house. During this stay, I looked at the mail sitting on his table just reading some of the mail stamps. On one of those letters envelopes, there was a mention of a government body.

I asked Don what he did, and he told me he was an aeronautics engineer. He is listed currently on [LinkedIn](#). I didn't think much of any of this. Not until the day I was in a strange situation and was standing not more than 25 feet from him. Staring this man face to face, in that situation, allowed me to really grasp the idea. I was his "special person of interest" that he told me he was meeting in his trip to Anderson, IN. However, it wasn't until I was given this book, and studying all the line items, that it all made sense.

You see, one night I was looking at the key terms in the line items. I heard in the spirit. Look at the photos to one of the key terms. Upon looking at them. I realized, I'd met an NASA team in the strip club and hung out with them for an entire week. One of the gentlemen's faces were so memorable. I couldn't believe what I was seeing. I then remembered. Don was into aeronautics. So, I looked up his aeronautics position. Was his position related to NASA? That was my question. To my surprise. It is. See that [here](#).

By this time, I was engrossed into the cipher. No way could I let it go. I had to keep digging into all the key terms until I had gained a full understanding of what was being said. That's when I was able to call events before they ever happened. My website also details this. The more that I looked. The more I became acclimated with what was going on in my life.

Without going into every detail. I'd like to highlight just a few important topics:

I used to work out almost 6 days a week. One day, I had a hard time completing 12 min workouts. I kept going to doctors and they treated me very strange. I almost died in 2007. Never could I get a doctor to help me. I could visit them one time and they would be normal with me. The second visit I'd found myself being treated as a foreigner with a wrap sheet of hurting little kids or something. It never made sense.

My house was being broken into often. Weird things were done. When I wasn't home. Such as drawings on my blinds with punched out holes that left a smiley face. There were times these smiley faces would be found drawn on paper found in random places in my home (like on my dresser after a good nights sleep and it wasn't there when I layed down). The tags on my vehicles were stolen. Phones, multiple phones, were taken and pictures were taken out of them and brought back.

One day someone touched me in my house and said, "boo" in my ear and no one was there. I went outside and hid by a tree. Then realizing how stupid I looked. I began running to the local bar. Someone was running with me. I could hear the footsteps hitting the ground right next to me and hear the breathing. But I didn't see anyone. Oh, how freaking crazy I felt I was going.

My furniture was changed in my home.

And the biggest one?

I knew someone was in the house. My kids acknowledged it. To keep a long story short. After calling the police twice that night and them finding nothing. Then calling my family and them finding nothing. I asked mom to take the kids. I set a make-shift fire in my home around the stairwell and began screaming. Omg! I set my house on fire.

Someone went running out of my house. It was raining that night. They left footprints when they jumped off the 2nd floor balcony. I called someone out. We followed those footprints and we found them in an abandoned home right next door. Wet footprints. Didn't see anyone. But noticed they went down into the basement. We were just about to go down the stairs when I heard in the spirit. NO! DO NOT GO DOWN THERE. I left home, rented a hotel room, and sat in the closet rocking all night. No one wanted to believe me. There were three children under my care. What do I do?

Flashforward.

I'm now realizing, I'm a subject of the US government for some nefarious operations. Although, I knew that much prior to this book. I was still missing information. How did

they poison me? What did they poison me with? I prayed and prayed. And that's when I saw a picture of this guy Josiah Zayner.

I danced for this man in Dancers show club on multiple occasions. It had to be then that I was infected with whatever they put into me.

Here's the thing. Josiah deals Crispr Cas9 right out of his house.

My body is not the same as it used to be. I'm sick all the time. I've four qualifying conditions to be a recipient for social security disability and I'm not getting any of the help I need. Doctors lie on me in doctors' records. People commit fraud all the time. Changing my records in ways that make no sense. Unless they've got something to cover up. Like, blood work.

Who could do such things? Heck, why would they do these things?

Well, how about all the alphabet agencies in conjunction with one another?

Think about it.

None of these guys are doing research or development of anything right now other than those things that relate to the mRNA, making super soldier, CrisprCAS9, or the human genome project. All three of these things intertwine and are affected or controlled by the same system (ie; frequencies, the energy grid, microwave radiation).

They're not doing them because they don't know what they're doing. They've been doing this stuff. Therefore, they're advancing quickly. They've used citizens as lab rats. They stalked, watched, robbed me, and stole the most precious years of my children growing into young adults.

There is no excuse for this sort of evil. None-the-less, they found one. Money...

Let's quickly look at Josiah's history.

He worked as a programmer with Motorola. He has a BA in plant biology from Southern Illinois University, and a Ph.D. in biophysics from the University of Chicago. Before he received his Ph.D., he earned an MSc in **cell in molecular biology** from Appalachian State University. [He is best known for self-experimentation and currently works making hands-on genetic engineering available to the public.](#) After he graduated in 2013, get this, [he went to work for NASA as a research scientist for their synthetic biology program. They say, he didn't like the work there, so he left in 2016.](#)

Wonder what he didn't like about working with NASA? The secrecy? The lies? The people he poisoned under that umbrella. Could that be what he didn't like? Ah, is he bound by gag orders?

He is now the [CEO of ODIN](#), which is an online biohacking retailer that allows any old body to buy biotech kits and experiment at home. I think he personally owes me one (although, I wouldn't use it. I have Jesus. No. Let me correct that. Jesus has me).

He explains these kits [here](#).

[His website](#) documents all his projects in writing. One of which is a glowing beer ([bioluminescence beer](#)) that he attributes to jellyfish proteins.

You can find him on social media @4LOVofScience and on Instagram @jzayner

I have been thinking a lot about contacting ole Josiah just to ask him if he remembers the lap dances, I gave him for a period of time. What do you think? Is it time to contact Josiah and record the interactions I have with him? I'm curious as to what others may think about this.

They stole my life. You couldn't pay me a billion dollars to tell another story. It's true. I know from my own experiences with a NASA team, this Josiah, and that Aeronautics engineer Don Ashford.

They came after me that year. In 2000, or around that time, they poisoned me with their tech. I believe they poisoned me in the club during the time I was dancing for Josiah. It absolutely makes sense as to why I would make calls to pay bills and people would always say their computers stopped working. This happened at cash registers all the time too.

My blood must have some foreign tech in it. That's why I feel stuff moving in my body. That is why I have bone deformities happening by the day.

On a side note: have you saw the man who was in the navy that had neural link implanted in him? John Guard Music is one of his handles.

He is now telling his story on TikTok and claims to be having bone deformities or the ability to grow new limbs, change eye color, and has the eye sight of a snake (along with the

slits now forming)? Is this a coincidence? Nah, I think not. These blue bloods new what they were doing.

If we are still here... A part 2 is coming.

They're going to set off an earthquake. You need to get to Jonathan's channel and get your bible out and get up to speed.

TARGETING INFORMATION

targeting terms derived from all the components of this cipher. Once put together it would form the entire framework of this targeting structure.

Access Stratum (3GPP) The access stratum (AS) in computer networking and telecommunications is a functional layer in the UMTS and LTE wireless telecom protocol stacks between radio network and user equipment. While the definition of the access stratum is very different between UMTS and LTE, in both cases the access stratum is responsible for transporting data over the wireless connection and managing radio resources. The radio network is also called access network.

Tumor-Specific Antigen (cell-surface antigen not occurring in normal cells)

A dielectric resonator antenna (DRA) is a radio antenna mostly used at microwave frequencies and higher, that consists of a block of ceramic material of various shapes, the dielectric resonator, mounted on a metal surface, a ground plane. Radio waves are introduced into the inside of the resonator material from the transmitter circuit and bounce back and forth between the resonator walls, forming standing waves. The walls of the resonator are partially transparent to radio waves, allowing the radio power to radiate into space.[1]

An advantage of dielectric resonator antennas is they lack metal parts, which become lossy at high frequencies, dissipating energy. So these antennas can have lower losses and be more efficient than metal antennas at high microwave and millimeter wave frequencies.[1] Dielectric waveguide antennas are used in some compact portable wireless devices, and military millimeter-wave radar equipment. The antenna was first proposed by Robert Richtmyer in 1939.[2] In 1982, Long et al. did the first design and test of dielectric resonator antennas considering a leaky waveguide model assuming magnetic conductor model of the dielectric surface .[3] In that very first investigation, Long et al. explored HEM_{11d} mode in a cylindrical shaped ceramic block to radiate broadside. After three decades, yet another mode (HEM_{12d}) bearing identical broadside pattern has been introduced by Guha in 2012.[4]

The bacterium *Deinococcus radiodurans* shows remarkable resistance to a range of damage caused by ionizing radiation, desiccation, UV radiation, oxidizing agents, and electrophilic mutagens. *D. radiodurans* is best known for its extreme resistance to ionizing radiation; not only can it grow continuously in the presence of chronic radiation (6 kilorads/h), but also it can survive acute exposures to gamma radiation exceeding 1,500 kilorads without dying or undergoing induced mutation.

Research Network, Inc. (Kennesaw, GA) *This company is listed. I looked it up to see what the involvement would be. I believe they're involved in mapping people and helping as a contractor to watch citizens on their radars. Here is an industry topic. Photogrammetric Engineering & Remote Sensing commonly referred to as PE&RS, is the official journal of imaging and geospatial information science and technology. Included in the journal on a regular basis are highlight articles such as the popular columns "Grids & Datums" and "Mapping Matters" and peer reviewed technical papers.* **Research Network Inc In Kennesaw, GA**
(generalliabilityinsure.com)

Relative Needs Index (RNI) Study applied indicators of patient-perceived treatment needs (i.e. symptom-based measures of disease, and social and psychological consequences of oral diseases and disorders) and compared them to a clinical judgment of urgency of care.

Relative Noncentrality Index RNI The RNI is $(d_0 - d_m) / d_m$, where 'd' is a noncentrality parameter, '0' signifies the null model and 'm' signifies the tested model. $d_m = (\text{chi-square}_m - \text{df}_m) / N$ where $(\text{chi-square}_m = \text{tested model chi-square}; \text{df}_m = \text{tested model df})$ $d_0 = (\text{chi-square}_0 - \text{df}_0) / N$ where $(\text{chi-square}_0 \text{ is null model chi-square}; \text{df}_0 \text{ is null model df})$

[ü Large-Orbit Gyrotron - NASA Astrophysics. These dudes are literally sending radiation at us using these devices they deployed up there.](#)

[ü The 30 keV / 0.7 A CW gyrotron is developed for the spectroscopy applications. Recently, selective operation at the second \(0.267 THz\) and at the third \(0.394 THz\) cyclotron harmonics was achieved. Special quasi-regular cavities are designed to achieve the fourth-](#)

[harmonic operation at frequencies of up to 0.65 THz. The pulsed 80-100 keV / 0.7-1.0 A gyrotron is aimed to provide high-power pulses of radiation at the third cyclotron harmonic at frequencies close to 1 THz. Now we study possibilities to increase the peak level of the output power up to the level of several kW in order to use this gyrotron in plasma applications. \(2currently being built <https://ieeexplore.ieee.org/document/9695031>\)](https://ieeexplore.ieee.org/document/9695031)

What a secret to keep from the public!

Of course, I've no solid medical evidence outside of the *but John Guard Music on TT does* which tells me they have been doing this (and I'm protected by the Lord God) because they will not allow me having medical evidence to happen. However, I am confidently able to say, this must be the reason why doctors treated me differently, and look, the treatment I received was not a one-time experience. As previously mentioned, if you would like to know more there are videos on my blog that will allow you to get more details. If you were to ask me though. I would tell you. They were all covering up for a nefarious group of people with a heck of a lot of power! The most important thing about any of what I'm saying here pertains to them doing this without my consent. The bigger connotations here have to do with how (and they're being very secretive because of the plan). Not one sane individual would give all their rights away so they can fully be under the control of a ruling oppressor.

There are tens of thousands of targeted individuals. They've been labeled schizophrenic instead of diagnosing the real problem, which just so happens to be research and development techniques deployed on citizens without their consent.

Look, I know you may believe I could be reaching, and I don't expect you to believe me. Maybe this evidence will change this?

How else did all of this get into the character names of that book?

Don Ashford.

Now I see why...

Josiah... you aren't cute and that money won't save ya. I'm praying for both of you. I hope you repent.

Thanks for reading

An updated list will come out next week if it be God's will on my website. I can't fight with this computer anymore. It's trying to do things to me. I need to unplug and stay away for awhile.

published 1/10/20 <https://ciphertexts.blogspot.com/2020/01/geothermal-plants-causing-earthquakes.html>

All one has to do is study the findings to see that Don Fum's mysterious directions telling us they're using geothermal systems, gas/oil pipelines, fracking, waste water treatment operations, and mining area's to plant low explosives to cause earthquakes is, in fact, the truth. Now how could any of this be possible to put together for some gal like me who doesn't know anything about any of this off my schooling and the likes? I'll tell you, it was a Holy Spirit teaching, that's kept me from losing my soul as I was knee-deep in sin.

Think about these guys being in charge of every geothermal plant in the entire world as well as every other operation I've mentioned. Using these systems together they could really change the landscape of the world. And this is their plan to depopulate using weather as a weapon coupled with bio-warfare and food/water/air poisoning.

Hence why all these movies show New York underwater ey? Did they know something we didn't know before us? Of course they did! And they use movies to slowly feed you the truth (hidden in plain sight). Leaving it up to you as to whether or not you will believe it. And because they own an operate every media outlet too they're able to say "Oh, don't listen to these conspiracy theorists", and the public blindly ignores the truth trusting these idiots who are nothing more than American traitors. These people have no idea how much they've hurt the American people with all the lies they tell. Now 10's of millions lives are at stake.

I commend all the dead journalists for standing up for what is right. Going against these people isn't easy when you're doing it alone. But if the public knew the power they had if they could stand behind the people doing it instead of shunning them SUPPORT THEM. We wouldn't be in such a bad situation as we are now. Our country is divided and that's all we needed to happen in order to conquer us.

By making you hate or fear your neighbor they've managed to drive wedges in every community. Making it nearly impossible for the people of their communities to come together to battle this New World Order beast. There is absolutely no turning back now. The system they have has begun being synced as of Dec. 31st. We're merely waiting on the faults to slip and the volcanoes to blow that will send us into a mini-ice age killing millions upon millions of American's.

Call me crazy for making the connections. I call you crazy delusional for not seeing them yourself. It's time to wake up America because the end of the Republic has never looked better to them.

Sounding off the end of the Republic
A republic if you can keep it

Another telegraph this time pointing out 1776 (the year Adam Weishaupt was said to be discovered for his plan to rule the world)

"When the time came, the Crown was not prepared for the Declaration of Independence. Over two centuries later, this insubordination came as no less of a surprise—and this time via social media. In both instances the impulse was to “get a handle on” the crisis. In 1776 the Royal Navy sailed into to British New York with hundreds of ships to swiftly quell a rebellion of subjects, not to fight a war against a sovereign nation with a general of their very own. Parliament even offered Washington a pardon for his insolence but refused to call him by his military title. In 2020, Buckingham Palace didn't even have to cross an ocean to issue a hastily crafted, infantilizing response to Wednesday's Instagram announcement (which tasted a little undercooked itself): “Discussions with the Duke and Duchess of Sussex are at an early stage. We understand their desire to take a different approach, but these are complicated issues that will take time to work through.”

Remember in the book the motto of Trump was Per Adua Astra which is the motto for the Royal Airforce?

This telegraph like all the others will lead to more telegraphs and will give important information regarding this entire plan. I'm not on the inside and upon following these I found myself guilty of saying THIS IS IT. And that's not what I started doing this for. So I've decided to limit what I will follow for the sake of my sanity and others. I will however still post as much as I know. Nothing more nothing less to keep showing everyone how its the spirit in man driving this whole plan. Soon all those with the light of God will be snuffed out. They're not targeting just blacks or asians. They're targeting anyone who doesn't have the same DNA they do. And that DNA is reptilian. But that's a subject I will leave alone today. Any questions Hit

me up

another post on 2/3/2020 <https://ciphertexts.blogspot.com/2020/02/paradise-catching-on-fire.html>

Random information adding to the rest of what's here thus far.

Chevron is conducting operations under the name Permian Basin. According to Don Fum's mysterious directions, they're in charge of setting up a system that enabled them to push water up under the earth's surface that will set off this seismic earthquake they purposely caused. The Permian Basin is connected to Permian Extinction and what's also contributing to cracks in the Caribbean.

"The Permian extinction was characterized by the elimination of over 95 percent of marine and 70 percent of terrestrial species. In addition, over half of all taxonomic families present at the time disappeared. This event ranks first in severity of the five major extinction episodes that span geologic time."

All events leading up to today are a part of the overall plan to depopulate tens of millions of people. Recently Paradise Island apartments set on fire in Florida. Do you recall California's Paradise? He went to California to address this one year after all the fires began (this plan repeats itself every year) so him visiting paradise, where he ended up saying "Pleasure" and not Paradise in his speech to mock the people (who do not know he is in-line with those who have planned to depopulate) was planned out to be a "marker" in time for the planners. Paradise came out of Back to the Future (a movie in which Biff was a representation of Trump) and again they use these "mediums" to mock, tell partial truths, and later use again to mark a position in time such as November in this retrospect.

Trump was elected on November 8th, 2016 and the fires began at this time. Here are a few facts to validate my claims made throughout this blog.

"A raging inferno swept through the Great Smoky Mountains National Park and into the city of Gatlinburg, Tennessee on November 28, 2016, killing 14 people and injuring 190 more. Damage caused by the fires is estimated at over \$500 million. 2460 structures were damaged or destroyed and 17,136 acres were burned."

According to Don Fum the global wildfire information system is utilized to send a signal, tell what region they are in (as the book says "the people will tell thee"), and even keep track of the work orders they've processed and the ones still needing to be processed. They're clearing the trees because you can't teach A.I fast enough how to clear trees since they're an ever-changing sort of environment.

"The Global Wildfire Information System is a joint initiative of the GEO and the Copernicus Work Programs. In the new GWIS work program for the years 2020-2020 the Global Wildfire

Information System (GWIS) aims at bringing together existing information sources at regional and national level in order to provide a comprehensive view and evaluation of fire regimes and fire effects at global level and to provide tools to support operational wildfire management from national to global scales."

Fires from November of 2016 continue today. Look here at the fires listed for this time frame and tell me this couldn't be an event to use as a "marker" to later address in future telegraphs. "Firefighters from 21 states[5] including Washington and Oregon had been part of the effort to fight the blazes. North Carolina Governor Pat McCrory said 1600 firefighters fought 19 fires in his state, at a cost of \$10 million since October 23. Arson is believed responsible for several fires in the Nantahala National Forest where 46,000 acres had burned as of November 18.[6][7] The Asheville Regional Airport reported no rain for ten days after October 8, 2016, after which the area was considered to be in severe drought,[8] while Cherokee, Clay and Macon Counties were considered to be in extreme drought. A month later these three counties and Graham and part of Swain were in exceptional drought, and ten other counties were in extreme drought. Only a trace of rain fell in the month ending November 15 and the airport reported a 10.8 inches (27 cm) deficit for the year 2016 as of November 18.[6][9][10] "

Another marker to this event would be the fire that happened at Trump towers on April 7th of 2017 (on the 50th floor) and get this I just found out that one had also happened on the roof in Jan of 2018. So two fires happened at Trump towers. One in April and the other in January.

pipeline outlined shadow species, and even klecks prophecy

All key players are utilizing this "pipeline" structure and it involves railways, oil / gas pipelines, and the telegraph are looking for a seismic earthquake in two major regions across the USA. Keywords are Abraham Lincoln, destroyer tender, Augustus, Wilhelm, organic energy or orgone energy, and there are other ground signals. I just wrote this to give a basic idea.
